Notes on Remote Software Upgrade

This Remote Software Upgrade brings existing functions up to the latest technical standard. New functions are equipment-dependent; information on your equipment can be found in the Owner's Manual in your MINI, from your service center or from MINI Connected Customer Relations.

As part of the upgrade, all installed MINI Connected apps and the Integrated Owner's Manual are automatically updated to the latest version. If control messages (e.g. parking brake, malfunction in the powertrain) are displayed, please restart the vehicle. If you perform the upgrade during charging, the charging process may be interrupted and may not continue automatically (only for BEV). Modifications/conversions or retrofits/engine tuning or special coding etc. to or in the vehicle that have not been approved by BMW NA ("BMW", "MINI") may be lost or lead to significant problems (including subsequent damage) during and after vehicle programming as a result of a MINI Remote Software Upgrade. Neither MINI nor any MINI service operation involved will be liable for any resulting damage. Remember, driver assistance systems do not replace your responsibility while driving.

Feature Upgrade: Charging

You can now provide feedback on public charging stations directly from your MINI. If a charging session does not start after navigating to a charging station, a pop-up will automatically appear on the central display, allowing you to quickly report the issue. You can also continue to share feedback after a successful charging session through Points of Interest. Your feedback helps improve the accuracy of charging station information for a more seamless charging experience.

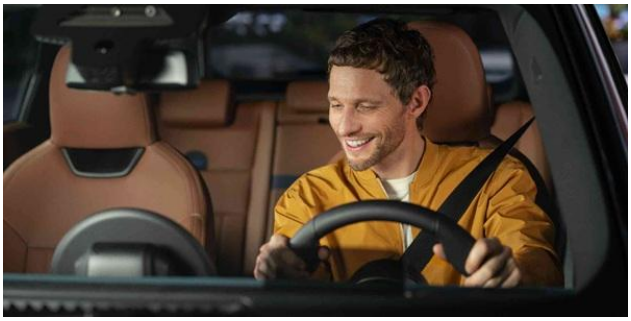
Feature Upgrade: MINI Maps

MINI Maps will soon offer more detailed lane guidance, displaying available lanes and their designated driving directions, including turn lanes. This enhanced visualization helps you navigate complex intersections and roadways with greater clarity and confidence. The feature will be available as part of the MINI Connected Plus package, which can be purchased separately.

Feature Upgrade: MINI Maps

Search results in MINI Maps are now powered by Google Maps places. This integration provides richer, more up-to-date information, including reviews, photos, business hours, and addresses. Improved search relevance helps you find the right destination faster and more easily.

Feature Upgrade: Charging



The new Peak Hours feature uses historical charging data to estimate how busy public charging stations are likely to be at your planned arrival time. This helps you anticipate charging point availability, plan your stops more efficiently, and minimize potential wait times.

Feature Upgrade: Exclude Home

You can now customize your MINI's welcome lighting by disabling lighting effects at your home address. Simply select your preferred locations in the "Doors and windows" menu and select "Exclude at home" to prevent automatic lighting animations when approaching your vehicle with your MINI Digital Key, smartphone, smartwatch, or physical key. The setting applies within approximately 550 yards of each selected location, while all vehicle unlocking functions remain available.

Service Task: Transmission

This software update optimizes drivetrain system performance by helping to ensure a smoother, more consistent driving experience.
