OWNER'S MANUAL.

MINI COUNTRYMAN.
MINI PACEMAN.
Owner's Manual for Vehicle

Thank you for choosing a MINI.

The more familiar you are with your vehicle, the better control you will have on the road. We therefore strongly suggest:

Read this Owner's Manual before starting off in your new MINI. It contains important information on vehicle operation that will help you make full use of the technical features available in your MINI. The manual also contains information designed to enhance operating reliability and road safety, and to contribute to maintaining the value of your MINI.

Supplementary information can be found in the additional brochures in the onboard literature.

Set off now and have fun with your MINI.

The MINI Team of BMW AG
ADDENDUM TO OWNER'S MANUAL

We wanted to provide you with some updates and clarifications with respect to the printed MINI Owner’s Manual. These updates and clarifications will supersede the materials contained in that document.

1. Where the terms “service center,” “the service center,” “your service center,” “service specialist,” or “service” are used in the Owner’s Manual, we wanted to clarify that the terms refer to a MINI dealer’s service center or another service center or repair shop that employs trained personnel that can perform maintenance and repair work on your vehicle in accordance with MINI specifications.

2. Where the text of the Owner’s Manual contains an affirmative instruction to contact a “service center” or “your service center,” we wanted to clarify that MINI recommends that, if you are faced with one of the situations addressed by that text, you contact or seek the assistance of a MINI dealer’s service center or another service center or repair shop that employs trained personnel that can perform maintenance and repair work on your vehicle in accordance with MINI specifications.

While MINI, at no cost to you, will pay for repairs required by the limited warranties provided with respect to your vehicle and for maintenance under the Maintenance Program during the applicable warranty and maintenance coverage periods, you are free to elect, both during those periods and thereafter, to have maintenance and repair work provided by other service centers or repair shops.

3. Where the Owner’s Manual makes reference to parts and accessories having been approved by MINI, those references are intended to reflect that those parts and accessories are recommended by MINI. You may elect to use other parts and accessories, but, if you do, we recommend that you make sure that any such parts and/or accessories are appropriate for use on your vehicle.

4. At page 6 and page 7, under the warranty section’s discussion of homologation, where it states that you “cannot lodge warranty claims for your vehicle there,” the text should read that you “may not be able to lodge warranty claims for your vehicle there.”

5. At page 7, in the “Parts and accessories” section, the sentence beginning “For your own safety … ,” should be disregarded and the following text should be read in lieu thereof: “The manufacturer of your vehicle recommends using genuine MINI parts and accessories.” In the fifth sentence of that paragraph, the word “cannot” should read “does not.”

6. At page 48, in the “Checking and replacing safety belts” section, the text beginning, “Have the work performed only by your service center …” should be disregarded and the following text should be read in lieu thereof: “MINI recommends having this work performed by a service center as it is important that this safety feature functions properly.”

7. At page 122 under the heading: “Objects in the area around the pedals” and at page 253 under the heading: “Carpets/floor mats,” the paragraph that begins: “Only use floor mats …” should be disregarded and the following language should be read in lieu thereof: “The manufacturer of your vehicle recommends that you use floor mats that have been identified by it as appropriate for use in your vehicle and that can be properly fixed in place.”

8. At page 129, under the heading: “Have maintenance carried out,” the sentence beginning, “Have the maintenance carried out …” should be disregarded and the following text should be read in lieu thereof:
“MINI recommends that you have the maintenance carried out by your service center.”

9. At page 207, under the heading “Software applications,” the text of that section should be disregarded and the following text read in lieu thereof: “The manufacturer of your vehicle recommends the use of MINI recommended software; otherwise there may be malfunctions in system operations.”

10. At page 216, under the heading “Pressure specifications,” the sentence beginning, “The inflation pressures apply to the tire sizes approved … .” should be disregarded.

11. At page 223, under the heading: “Approved wheels and tires,” the term “Approved” should be disregarded and in lieu thereof, the term “Recommended” should be read in its place. In addition, the text of that section should be disregarded and the following text should be read in lieu thereof:

The manufacturer of your vehicle strongly suggests that you use wheels and tires that have been recommended by the vehicle manufacturer for your vehicle type; otherwise, for example, despite having the same official size ratings, variations can lead to body contact and with it, the risk of severe accidents.

The manufacturer of your vehicle does not evaluate non-recommended wheels and tires to determine if they are suitable for use on your vehicle.

12. At page 229, under the heading “Hood,” the sentence beginning, “If you are unfamiliar” should be disregarded.

13. At page 233, under the heading: “Service and Warranty Information Booklet for US Models and Warranty and Service Guide Booklet for Canadian Models,” the second paragraph should be disregarded and the following text read in lieu thereof:

The manufacturer of your vehicle recommends that you have maintenance and repair performed by your MINI dealer’s service center or another service center or repair shop that employs trained personnel that can perform maintenance and repair work on your vehicle in accordance with MINI specifications. The manufacturer of your vehicle recommends that you maintain records of all maintenance and repair work performed on your vehicle.

14. At page 243, under the “Battery replacement” section, the text should be disregarded and in lieu thereof the following text should be read:

Use of recommended vehicle batteries

The manufacturer of your vehicle recommends that you use vehicle batteries that it has tested and recommends for use in your vehicle; otherwise the vehicle could be damaged and systems or functions may not be fully available.

After a battery replacement, the manufacturer of your vehicle recommends that you have the battery registered on your vehicle by a service center to ensure that all comfort functions are fully available, and that any “check control” messages of these comfort functions are no longer displayed.
The fastest way to find information on a particular topic or item is by using the index, refer to page 268.

USING THIS OWNER'S MANUAL

The fastest way to find information on a particular topic is by using the index.

An initial overview of the vehicle is provided in the first chapter.

Additional sources of information

Should you have any questions, your service center will be glad to advise you at any time.

Information on MINI, e.g., on technology, is available on the Internet: www.mini.com

Information about MINI, e.g., on technology, is available on the Internet: www.miniusa.com

SYMBOLS

A Indicates precautions that must be followed precisely in order to avoid the possibility of personal injury and serious damage to the vehicle.

Mark the end of a specific item of information.

"..." Identifies Control Display texts used to select individual functions.

Verbal instructions to use with the voice activation system.

Identifies the answers generated by the voice activation system.

Refers to measures that can be taken to help protect the environment.

Symbols on vehicle components

Indicates that you should consult the relevant section of this Owner’s Manual for information on a particular part or assembly.

VEHICLE EQUIPMENT

The manufacturer of your MINI is the Bayerische Motoren Werke Aktiengesellschaft, BMW AG.

This Owner’s Manual describes all models, all series equipment, as well as country-specific and special equipment offered in the model series. Therefore, this Owner's Manual also describes and depicts equipment that may not be contained in your vehicle because of the selected special equipment or country version, for example.

This also applies to safety-related functions and systems.

For options and equipment not described in this Owner’s Manual, please refer to the Supplementary Owner's Manuals.

STATUS OF THIS OWNER'S MANUAL AT TIME OF PRINTING

The manufacturer of your vehicle pursues a policy of constant development that is conceived to ensure that our vehicles continue to embody the highest quality and safety standards. In rare cases, therefore, the features described in this Owner's Manual may differ from those in your vehicle.

FOR YOUR OWN SAFETY

Warranty

Your vehicle is technically configured for the operating conditions and registration requirements applying in the country of first delivery — homologation. If your vehicle is to be operated in a different country it might be neces-
sary to adapt your vehicle to potentially differing operating conditions and permit requirements. If your vehicle does not comply with the homologation requirements in a certain country you cannot lodge warranty claims for your vehicle there. Further information can be obtained from your Service Center.

**Maintenance and repairs**

Advanced technology, e.g., the use of modern materials and high-performance electronics, requires suitable maintenance and repair methods.

Therefore, have this work performed only by a MINI service center or a workshop that works according to MINI repair procedures with appropriately trained personnel.

If this work is not carried out properly, there is the danger of subsequent damage and related safety hazards.

**Parts and accessories**

For your own safety, it is recommended that you use genuine parts and accessories approved by MINI. When you purchase accessories tested and approved by MINI and Genuine MINI Parts, you simultaneously acquire the assurance that they have been thoroughly tested by MINI to ensure optimum performance when installed on your vehicle. MINI warrants these parts to be free from defects in material and workmanship. MINI will not accept any liability for damage resulting from installation of parts and accessories not approved by MINI. MINI cannot test every product made by other manufacturers to verify if it can be used on a MINI safely and without risk to either the vehicle, its operation, or its occupants. Genuine MINI Parts, MINI Accessories and other products approved by MINI, together with professional advice on using these items, are available from all MINI centers. Installation and operation of non MINI approved accessories such as alarms, radios, amplifiers, radar detectors, wheels, suspension components, brake dust shields, telephones, including operation of any mobile phone from within the vehicle without using an externally mounted antenna, or transceiver equipment, for instance, CBs, walkie-talkies, ham radios or similar accessories, may cause extensive damage to the vehicle, compromise its safety, interfere with the vehicle's electrical system or affect the validity of the MINI Limited Warranty. See your MINI center for additional information. Maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any certified automotive part.

**California Proposition 65 Warning**

California laws require us to state the following warning:

Engine exhaust and a wide variety of automobile components and parts, including components found in the interior furnishings in a vehicle, contain or emit chemicals known to the State of California to cause cancer and birth defects and reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Battery posts, terminals and related accessories contain lead and lead compounds. Wash your hands after handling. Used engine oil contains chemicals that have caused cancer in laboratory animals. Always protect your skin by washing thoroughly with soap and water.

**Service and warranty**

We recommend that you read this publication thoroughly. Your vehicle is covered by the following warranties:

- New Vehicle Limited Warranty.
- Rust Perforation Limited Warranty.
- Federal Emissions Performance Warranty.
California Emission Control System Limited Warranty.

Detailed information about these warranties is listed in the Service and Warranty Information Booklet for US models or in the Warranty and Service Guide Booklet for Canadian models.

Your vehicle has been specifically adapted and designed to meet the particular operating conditions and homologation requirements in your country and continental region in order to deliver the full driving pleasure while the vehicle is operated under those conditions. If you wish to operate your vehicle in another country or region, you may be required to adapt your vehicle to meet different prevailing operating conditions and homologation requirements. You should also be aware of any applicable warranty limitations or exclusions for such country or region. In such case, please contact Customer Relations for further information.

Maintenance

Maintain the vehicle regularly to sustain the road safety, operational reliability and the New Vehicle Limited Warranty.

Specifications for required maintenance measures:
▷ MINI Maintenance system
▷ Service and Warranty Information Booklet for US models
▷ Warranty and Service Guide Booklet for Canadian models

If the vehicle is not maintained according to these specifications, this could result in serious damage to the vehicle. Such damage is not covered by the MINI New Vehicle Limited Warranty.

DATA MEMORY

Numerous electronic components in your vehicle contain data memories that store technical information on the vehicle condition, events and faults, either temporarily or permanently. This technical information generally documents the state of a component, a module, a system or the environment:
▷ Operating conditions of system components, such as filling levels.
▷ Status messages from the vehicle and its individual components, such as wheel rpm/speed, motion delay, transverse acceleration.
▷ Malfunctions and defects in important system components, such as lights and brakes.
▷ Vehicle responses to special driving situations, such as airbag deployment, use of the stability control systems.
▷ Ambient conditions, such as the temperature.

These data are of a technical nature only and are used to detect and eliminate faults and to optimize vehicle functions. Travel profiles of routes driven with the vehicle cannot be created from these data. If services are used, for instance in the event of repairs, service processes, warranty cases, quality assurance, etc., this technical information can be read out from the event and fault data memories by service personnel, including the manufacturer, using special diagnosis tools. This service personnel can provide you with more information if needed. After troubleshooting, the information in the fault memory is cleared or overwritten continuously.

Situations are conceivable during the use of the vehicle in which these technical data could become associated with a specific person in combination with other information, such as an accident report, damage to the vehicle, witness accounts, etc., possibly with the involvement of an authorized expert.

Additional functions that are contractually agreed with the customer, such as vehicle localization in the event of an emergency, permit the transfer of certain vehicle data out of the vehicle.
EVENT DATA RECORDER EDR

This vehicle is equipped with an event data recorder (EDR). The main purpose of an EDR is to record, in certain crash or near crash-like situations, such as an air bag deployment or hitting a road obstacle, data that will assist in understanding how a vehicle's systems performed. The EDR is designed to record data related to vehicle dynamics and safety systems for a short period of time, typically 30 seconds or less.

The EDR in this vehicle is designed to record such data as:

▷ How various systems in your vehicle were operating.
▷ Whether or not the driver and passenger safety belts were fastened.
▷ How far, if at all, the driver was depressing the accelerator and/or brake pedal.
▷ How fast the vehicle was traveling.

These data can help provide a better understanding of the circumstances in which crashes and injuries occur.

EDR data are recorded by your vehicle only if a nontrivial crash situation occurs; no data are recorded by the EDR under normal driving conditions and no personal data, e.g., name, gender, age, and crash location, are recorded.

However, other parties, such as law enforcement, could combine the EDR data with the type of personally identifying data routinely acquired during a crash investigation.

To read data recorded by an EDR, special equipment is required, and access to the vehicle or the EDR is needed. In addition to the vehicle manufacturer, other parties, such as law enforcement, that have the special equipment, can read the information if they have access to the vehicle or the EDR.

REPORTING SAFETY DEFECTS

For US customers

The following only applies to vehicles owned and operated in the US.

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA), in addition to notifying BMW of North America, LLC, P.O. Box 1227, Westwood, New Jersey 07675-1227, Telephone 1-800-831-1117.

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign.

However, NHTSA cannot become involved in individual problems between you, your dealer, or BMW of North America, LLC.

To contact NHTSA, you may call the Vehicle Safety Hotline toll-free at 1-888-327-4236 (TTY: 1-800-424-9153); go to http://www.safercar.gov; or write to: Administrator, NHTSA, 400 Seventh Street, SW., Washington, DC 20590.

You can also obtain other information about motor vehicle safety from http://www.safercar.gov

For Canadian customers

Canadian customers who wish to report a safety-related defect to Transport Canada, Defect Investigations and Recalls, may telephone the toll-free hotline 1-800-333-0510. You can also obtain other information about motor vehicle safety from http://www.tc.gc.ca/roadsafety.

DISPLAYS
INDICATOR/WARNING LIGHTS

The concept

The indicator and warning lights can light up in a variety of combinations and colors in display area 1 or 2.

Several of the lights are checked for proper functioning when the engine is started or the ignition is switched on, and light up briefly.

Text messages

Text messages at the upper edge of the Control Display explain the meaning of the displayed indicator and warning lights.

Supplementary text messages

You can call up more information, e.g., on the cause of a malfunction and on how to respond, via Check Control, refer to page 74.

In urgent cases, this information will be shown as soon as the corresponding light comes on.

Indicator lights without text messages

The following indicator lamps notify you that certain functions are active:

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

THE CONCEPT

The onboard monitor combines the functions of a large number of different switches. Thus, these functions can be operated from a central location.

Using the onboard monitor during a trip

To avoid becoming distracted and posing an unnecessary hazard to your vehicle's occupants and to other road users, never attempt to use the controls or enter information unless traffic and road conditions allow this.

CONTROL ELEMENTS AT A GLANCE

Control elements

1. Control Display
2. MINI joystick with buttons

The buttons can be used to open the menus directly. The MINI joystick can be used to select menu items and create settings.

Control Display

Hints

▷ To clean the Control Display, follow the care instructions, refer to page 253.
▷ Do not place objects close to the Control Display; otherwise, the Control Display can be damaged.

Switch off

1. Move the MINI joystick repeatedly to the right until the "Options" menu appears.
2. "Switch off control display"

Buttons on the MINI joystick

<table>
<thead>
<tr>
<th>Press button</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>🏡</td>
<td>Open the main menu.</td>
</tr>
<tr>
<td>📸</td>
<td>Changes to another menu.</td>
</tr>
</tbody>
</table>

OPERATING CONCEPT

Switching on
Press the MINI joystick to switch on.

MINI joystick with buttons
Select menu items and create settings.

1. Turn, arrow 1.

2. Press, arrow 2.

3. Move in four directions.

Start screen
In the radio ready state and higher, the following message appears on the Control Display:

To hide the message: press the MINI joystick. The main menu is displayed.
The message is automatically hidden after approx. 10 seconds.

Opening the main menu

Press the button.

The main menu is displayed.
All onboard monitor functions can be called up via the main menu.

**Selecting menu items**
Menu items shown in white can be selected.

1. Turn the MINI joystick until the desired menu item is highlighted.

2. Press the MINI joystick.
A new menu is displayed or the function is performed.

With the button on the MINI joystick:

Press the button.
The menu items of the main menu can be opened consecutively by pressing the button repeatedly.

**Menu items in the Owner's Manual**
In the Owner's Manual, menu items that can be selected are set in quotation marks, e.g., "Settings".

**Changing between panels**
After a menu item is selected, e.g., "Radio", a new panel is displayed. Panels can overlap.

- Move the MINI joystick to the left.
The current panel is closed and the previous panel is displayed.
- Move the MINI joystick to the right.
A new panel is opened on top of the previous display.

White arrows pointing to the left or right indicate that additional panels can be opened.

**View of an opened menu**
When a menu is opened, it generally opens with the panel that was last selected in that menu. To display the first panel of a menu:
Move the MINI joystick to the left repeatedly until the first panel is displayed.

**Opening the Options menu**
Move the MINI joystick repeatedly to the right until the "Options" menu appears.

**Options menu**
The "Options" menu consists of various areas:

- Screen settings, e.g., "Switch off control display".
- Control options for the selected main menu, e.g., for "Radio".
- If applicable, further operating options for the selected menu, for instance "Store station".
Changing settings
1. Select a field.
2. Turn the MINI joystick until the desired setting is displayed.
3. Press the MINI joystick to confirm the setting.

Activating/deactivating the functions
Several menu items are preceded by a checkbox. It indicates whether the function is activated or deactivated. Selecting the menu item activates or deactivates the function.
- ☑ Function is activated.
- ☐ The function is deactivated.

Example: Setting the Clock

Setting the clock
1. Press the button. The main menu is displayed.
2. Turn the MINI joystick until "Settings" is highlighted and press the MINI joystick.
3. If necessary, move the MINI joystick to the left to display "Time/Date".
4. Turn the MINI joystick until "Time/Date" is highlighted and press the MINI joystick.
5. Turn the MINI joystick to set the hours and press the MINI joystick.
6. Turn the MINI joystick to set the minutes and press the MINI joystick.

Status Information
Status field
The following information is displayed in the status field at the top right:
Status field symbols

The symbols are grouped into various categories.

Radio symbols

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

General information

1. Turn the MINI joystick: select letters or numbers.
2. Select additional letters or numbers if needed.
3. "OK": confirm the entry.

Switching between letters and numbers

Depending on the menu, you can switch between entering letters and numbers.
Switching between upper and lower case letters
Depending on the menu, you can switch between entering uppercase and lowercase letters.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABC</td>
<td>Enter the letters.</td>
</tr>
<tr>
<td>1@4</td>
<td>Enter the numbers.</td>
</tr>
</tbody>
</table>

Move the MINI joystick forward:
- switch from upper to lower case letters.
- switch from lower to upper case letters.

Entry comparison
Entry of names and addresses: the selection is narrowed down every time a letter is entered and letters may be added automatically.

The entries are continuously compared to the data stored in the vehicle.

▷ Only those letters are offered during the entry for which data is available.
▷ Destination search: town/city names can be entered using the spelling of language available on the Control Display.
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

THE CONCEPT

▷ Most functions that are displayed on the Control Display can be operated with the voice activation system using spoken commands. The system prompts you to make your entries.
▷ Functions that can only be used when the vehicle is stationary cannot be operated using the voice activation system.
▷ The system uses a special microphone in the headliner on the driver's side.
▷ ›...‹ Verbal instructions in the Owner's Manual to use with the voice activation system.

REQUIREMENTS

Via the Control Display, set a language that is also supported by the voice activation system so that the spoken commands can be identified.

Set the language, refer to page 72.

USING VOICE ACTIVATION

Activating the voice activation system

1. Press the button on the steering wheel.
2. Wait for the signal.
   ❀ This symbol on the Control Display indicates that the voice activation system is active.
3. Say the command.
   The command appears on the Control Display.
   If no other commands are available, operate the function via the onboard monitor in this case.

Terminating the voice activation system

Briefly press the button on the steering wheel or ›Cancel‹.

POSSIBLE COMMANDS

Most menu items on the Control Display can be voiced as commands.

The available commands depend on the menu that is currently displayed on the Control Display.
The functions of the main menu have short commands. Some list items, such as the phone book entries, can also be selected via the voice activation system. Say the list items exactly as they are displayed on the list.

**Having possible commands read aloud**
You can have the system read possible commands aloud: ›Voice commands‹.

For example, if the "CD" menu is displayed, the commands for the operating the CD player are read out loud.

**Executing functions using short commands**
Functions on the main menu can be performed directly by means of short commands, usually irrespective of which menu item is currently selected, for instance ›Vehicle status‹.

List of short commands of the voice activation system, refer to page 262.

**Help dialog for the voice activation system**
Calling up help dialog: ›Help‹.

Additional commands for the help dialog:

▷ ›Help with examples‹: information about the current operating options and the most important commands for them are announced.

▷ ›Help with voice activation‹: information about the principle of operation for the voice activation system is announced.

### EXAMPLE: PLAYING BACK A CD

**Via the main menu**
The commands of the menu items are spoken out loud, in the same way as they are selected via the MINI joystick.

1. Switch on the Entertainment sound output if necessary.
2. Press the button on the steering wheel.
3. ›CD and multimedia‹: The medium last played is played back.
4. ›CD‹:
5. ›CD drive‹: The CD is played back.
6. Press the button on the steering wheel again to select a specific track.
7. ›Track ...‹ e.g., CD track 4.

**Via short commands**
Playback of the CD can also be started using a short command.

1. Switch on the Entertainment sound output if necessary.
2. Press the button on the steering wheel.
3. ›CD drive Track ...‹ e.g., CD track 4.

**SETTING THE VOICE DIALOG**
You can set whether the system should use the standard dialog or a shorter version.

In the shorter variant of the voice dialog, the announcements from the system are issued in an abbreviated form.
On the Control Display:

1. "Settings"
2. "Language/Units"
3. "Speech mode:"
4. Select the setting.

ADJUSTING THE VOLUME

Turn the volume button during the spoken instructions until the desired volume is set.

▷ The volume remains constant even if the volume of other audio sources is changed.
▷ The volume is stored for the remote control currently in use.

NOTES ON EMERGENCY REQUESTS

Do not use the voice activation system to initiate an Emergency Request. In stressful situations, the voice and vocal pitch can change. This can unnecessarily delay the establishment of a telephone connection.

ENVIRONMENTAL CONDITIONS

▷ Say the commands, numbers, and letters smoothly and with normal volume, emphasis, and speed.
OPENING AND CLOSING

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

REMOTE CONTROL/KEY

Buttons on the remote control

Press button 1 to unlock the key.

The integrated key fits the following locks:

- Driver's door, refer to page 34.

New remote controls

You can obtain new remote controls from your service center.

Loss of the remote controls

Lost remote controls can be blocked by your service center.

PERSONAL PROFILE

The concept

You can set several of your vehicle's functions to suit your personal needs and preferences.

- Through Personal Profile, most of these settings are stored for the remote control currently in use.

General information

Each remote control contains a rechargeable battery that is automatically recharged when it is in the ignition lock while the car is being driven. Use each remote control at least twice a year for longer road trips in order to maintain the batteries' charge status.

In vehicles equipped with Comfort Access, the remote control contains a replaceable battery, refer to page 39.

In addition, information about service requirements is stored in the remote control, Service data in the remote control, refer to page 233.
While the vehicle is being unlocked, the remote control is recognized and the settings stored with it are called up and implemented.

Your personal settings will be recognized and called up again even if the vehicle has been used in the meantime by someone else with another remote control.

The individual settings are stored for no more than three remote controls.

**Personal Profile settings**

The following functions and settings can be stored in a profile.

More information on the settings can be found under:

- Response of the central locking system when the car is being unlocked, refer to page 32.
- Automatic locking of the vehicle, refer to page 35.
- Triple turn signal activation, refer to page 60.
- Settings for the displays on the onboard monitor, in the speedometer, and in the tachometer:
  - 12h/24h clock format, refer to page 71.
  - Date format, refer to page 72.
  - Brightness of the Control Display, refer to page 73.
- Language on the Control Display, refer to page 72.
- Units of measure for fuel consumption, distance covered/remaining distances, and temperature, refer to page 71.
- Light settings:
  - Headlamp courtesy delay feature, refer to page 78.
  - Daytime running lights, refer to page 78.
- Automatic climate control, refer to page 101: AUTO program, activating/deactivating the cooling function, setting the temperature, air volume, and air distribution.
- Entertainment:
  - Tone settings, refer to page 154.
  - Volume, refer to page 154.

**CENTRAL LOCKING SYSTEM**

**The concept**

The central locking system becomes active when the driver's door is closed. The system simultaneously engages and releases the locks on the following:

- Doors.
- Tailgate.
- Fuel filler flap.

**Operating from the outside**

- Via the remote control.
- Via the door lock.
- In cars with Comfort Access, via the door handles on the driver's and front passenger sides.

The following takes place simultaneously when locking/unlocking the vehicle via the remote control:

- Depending on the vehicle equipment, the anti-theft protection is switched on and off as well. The anti-theft protection makes it impossible to unlock the doors using the lock buttons or door handles.
- The welcome lamps, interior lamps, and ambient lighting are switched on and off.
- The alarm system is armed or disarmed, refer to page 39.
Operating from the inside
Via the switch/button for the central locking system, refer to page 34.
In an accident of the necessary severity, the central locking system unlocks automatically.
The hazard warning system and interior lamps come on.

OPENING AND CLOSING: FROM THE OUTSIDE

Using the remote control

General information
⚠️ Take the remote control with you
People or animals left unattended in a parked vehicle can lock the doors from the inside. Always take the remote control with you when leaving the vehicle so that the vehicle can then be opened from the outside.

Unlocking

⚠️ Press the button. The vehicle is unlocked.
The welcome lamps and interior lamps are switched on.
You can set how the vehicle is to be unlocked.

The setting is stored for the remote control currently in use.

1. "Settings"

2. "Door locks"

3. "Unlock button"

4. Select the desired function:
   - "All doors"
     - Press the button once: the entire vehicle unlocks.
   - "Driver's door only"
     - Pressing the button once unlocks only the driver’s door and the fuel filler flap. Pressing twice unlocks the entire vehicle.

Convenient opening

⚠️ Press and hold the button on the remote control.
The power windows are opened. Depending on the vehicle equipment, the glass sunroof is raised.
Convenient closing with the remote control is not possible.

**Locking**

- Press the button.

*Locking from the outside*

- Do not lock the vehicle from the outside if there are people in it, as the vehicle cannot be unlocked from inside without special knowledge.

**Setting the confirmation signals**

Have unlocking or locking of the vehicle confirmed.

1. "Settings"
2. "Door locks"
3. "Flash when lock/unlock"
4. Press the MINI joystick.

**Switching on the interior lamps**

When the vehicle is locked:

- Press the button.

You can also use this function to locate your vehicle in parking garages, etc.

**Unlocking the tailgate**

- Press the button for approx. 1 second and then release it.

**Malfunctions**

The function of the remote control may be impaired by local radio waves. If this occurs, unlock and lock the vehicle at the door lock with the integrated key.

If it should become impossible to lock the vehicle with a remote control, the battery in the remote control is discharged. Use this remote control on an extended trip to recharge the battery, refer to page 30.

**For US owners only**

The transmitter and receiver units comply with part 15 of the FCC/Federal Communication Commission regulations. Operation is governed by the following:

- **FCC ID:**
  - LX8766S
  - LX8766E
  - LX8CAS

**Compliance statement:**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- this device must accept any interference received, including interference that may cause undesired operation.

Any unauthorized modifications or changes to these devices could void the user's authority to operate this equipment.
Using the door lock

Sets how the vehicle is to be unlocked, refer to page 32.

In some vehicle equipment versions, only the driver’s door can be unlocked and locked via the door lock.

⚠️ Locking from the outside
Do not lock the vehicle from the outside if there are people in it, as the vehicle cannot be unlocked from inside without special knowledge.

Unlocking the doors and tailgate at once

To lock all doors, the fuel filler flap, and the tailgate at once:

1. With the doors closed, lock the vehicle using the button for the central locking system in the interior, refer to page 34.
2. Unlock and open the driver’s or front passenger door, refer to page 35.
3. To lock the vehicle:
   - Lock the driver’s door using the integrated key in the door lock, or
   - Press down the lock button of the front passenger door and close the door from the outside.

Convenient opening and closing

In vehicles with an alarm system or Comfort Access, the windows and the glass sunroof can be operated via the door lock.

Opening/closing

Turn the key to the unlock or lock position and hold it there.

⚠️ Keep the closing area clear
Watch during the opening and closing process to be sure that no one becomes trapped. Relo osing the key stops the motion.

Manual operation

If an electrical malfunction occurs, the driver’s door can be unlocked or locked by turning the integrated key to the end positions of the door lock.

OPENING AND CLOSING: FROM THE INSIDE

Operation via

➤ Switch in the center console:

➤ Button in the driver’s or front passenger door:

The graphic shows the button in the MINI Paceman as an example.
The switch or the buttons can be used to lock or unlock the doors and tailgate when the doors are closed, but they are not theft-protected. The fuel filler flap remains unlocked.

Unlocking and opening doors

▷ Using the switch or the buttons for the central locking system, unlock all of the doors at once and then pull the door opener above the armrest, or
▷ Pull the door handle on each door twice: the door is unlocked the first time and opened the second time.

Locking

▷ Press the switch/button or
▷ Push down the lock button of a door. To avoid locking yourself out by accident, the driver's door cannot be locked at the lock button while the door is open.

Automatic locking

In addition, it is possible to set the situations in which the vehicle locks. The setting is stored for the remote control in use.

1. "Settings"
2. "Door locks"
3. Select a menu item:
   ▷ "Lock if no door is opened"
   The central locking system locks after a short period if no door is opened.
   ▷ "Lock after start. to drive"
   The central locking system locks when you start driving.

Take the remote control with you

People or animals left unattended in a parked vehicle can lock the doors from the inside. Always take the remote control with you when leaving the vehicle so that the vehicle can then be opened from the outside.

TAILGATE

Opening

The tailgate pivots back and up when it opens. Ensure that adequate clearance is available before opening.

Provide edge protection

Sharp or angular objects can hit the rear window while driving and damage the heating wires of the rear window. Provide edge protection.

Only drive with the tailgate fully closed; otherwise, the tail lamps will be hidden from view and driving safety will be compromised.

In some market-specific versions, the tailgate can only be unlocked using the remote control if the vehicle was unlocked first.
Opening from the inside

Press the button on the driver’s footwell.

MINI Countryman

Press the top half of the MINI emblem, arrow, or

Press the button on the remote control for approx. 1 second and release. The tailgate is unlocked.

Closing

Keep the closing area clear
Make sure that the closing area of the tailgate is clear; otherwise, injuries or damage may result.

Take the remote control with you
Always take the remote control with you when leaving the vehicle and do not place it in the cargo area; otherwise, the remote control may be locked into the vehicle when the tailgate is closed.

Move the cover into position
When closing, ensure that the cargo cover is resting on the rubber buffers of the securing straps; otherwise, damage may occur when closing the tailgate.

MINI Paceman

Recessed grips on the inside trim of the tailgate can be used to conveniently pull down the tailgate.

Press the top half of the MINI emblem, arrow, or
MINI Paceman

Recessed grips on the inside trim of the tailgate can be used to conveniently pull down the tailgate.

COMFORT ACCESS

The concept
The vehicle can be accessed without activating the remote control. All you need to do is to have the remote control with you, e.g., in your jacket pocket. The vehicle automatically detects the remote control when it is nearby or in the passenger compartment.

Comfort Access supports the following functions:
- Unlocking/locking of the vehicle.
- Unlocking of the tailgate separately.
- Starting the engine.

Functional requirements
- There are no external sources of interference in the vicinity.
- To lock the vehicle, the remote control must be located outside of the vehicle.
- The next unlocking and locking cycle is not possible until after approx. 2 seconds.
- The engine can only be started if the remote control is inside the vehicle.
- The doors and tailgate must be closed to operate the windows.

Comparison with ordinary remote control
The functions can be controlled by pressing the buttons or via Comfort Access.

Notes on opening and closing, refer to page 30.

If you notice a brief delay while opening or closing the windows or glass sunroof, the system is checking whether a remote control is inside the vehicle. Repeat the opening or closing procedure, if necessary.

Unlocking

Press button 1.

Depending on the setting, either only the driver’s door or the entire vehicle is unlocked, refer to page 32.

Pressing the button again locks the entire vehicle again.

Convenient opening with the remote control, refer to page 32.

Locking

Press button 1.

For Convenient closing, press and hold button 1.

The windows and, if applicable, the glass sunroof are closed in addition.

Unlocking the tailgate separately
Press the top half of the MINI emblem.

This corresponds to pressing the following button on the remote control: .
If a remote control accidentally left in the cargo area is detected in the locked vehicle after the tailgate is closed, the tailgate opens again slightly. The hazard warning system flashes and an acoustic signal sounds.

**Power windows and electrical glass sunroof**

When the engine is switched off, the windows and the sunroof can be operated as long as neither the doors nor the tailgate are opened.

When the door and tailgate are closed again and the remote control is detected inside the vehicle, the windows and the sunroof can be operated again.

Insert the remote control into the ignition lock to be able to operate the windows and the sunroof while the engine is switched off and the doors are open.

**Switching on the radio ready state**

Press the Start/Stop button to switch on the radio ready state, refer to page 57.

Do not depress the brake or the clutch; otherwise, the engine will start.

**Starting the engine**

The engine can be started or the ignition can be switched on, refer to page 57, when a remote control is inside the vehicle. It is not necessary to insert a remote control into the ignition lock.

**Switching off the engine in cars with Steptronic transmission**

The engine can only be switched off with the selector lever in position P, refer to page 64.

To switch off the engine with the selector lever in position N, the remote control must be inserted in the ignition lock.

**Before driving a vehicle with Steptronic transmission into a car wash**

1. Insert the remote control into the ignition switch.
2. Depress the brake pedal.
3. Move the selector lever to position N.
4. Switch the engine off.

The vehicle can roll.

**Malfunction**

The Comfort Access functions can be disturbed by local radio waves, such as by a mobile phone in the immediate vicinity of the remote control or when a mobile phone is being charged in the vehicle.

If this occurs, open or close the vehicle using the buttons on the remote control or use the integrated key in the door lock.

To start the engine afterward, insert the remote control into the ignition switch.

**Warning lights**

The warning light in the instrument cluster lights up when you attempt to start the engine: the engine cannot be started.

The remote control is not in the vehicle or has a malfunction. Take the remote control with you inside the vehicle or have it checked. If necessary, insert another remote control into the ignition switch.

The warning lamp in the instrument cluster lights up while the engine is running: the remote control is no longer inside the vehicle.

After switching off the engine, the engine can only be started again within approx. 10 seconds if no door has been opened.

The indicator lamp lights up and a message appears on the Control Display: replace the remote control battery.
Replacing the battery
The remote control for Comfort Access contains a battery that will need to be replaced from time to time.

1. Remove the cover.
2. Insert a new battery with the positive side facing upwards.
3. Press the cover closed.

Return used battery to a recycling center or to your service center.

Arming and disarming the alarm system

General information
When the vehicle is locked and unlocked, the alarm system is armed and disarmed at the same time.

Door lock and armed alarm system
Unlocking via the door lock will trigger the alarm on some market-specific versions. To stop this alarm, unlock the vehicle with the remote control or switch on the ignition.

Tailgate with armed alarm system
The tailgate, refer to page 33, can also be opened when the alarm system is armed.

Switching off the alarm
- Unlock the vehicle using the remote control, refer to page 32.
- Insert the remote control all the way into the ignition lock.
- With Comfort Access and if you are carrying the remote control with you, push the button on the door lock.

Display on the tachometer
When the alarm system is being armed, all LEDs pulse like a heartbeat. One LED flashes after approx. 16 minutes.

ALARMS SYSTEM

The concept
The enabled alarm system reacts to the following:
- Opening of a door, the hood or the tailgate.
- Movements inside the vehicle.
- Changes in the vehicle tilt, e.g., during attempts to steal a wheel or tow the car.
- Interruptions in battery voltage.

Depending on the market-specific version, the alarm system briefly signals unauthorized entry attempts by:
- By sounding an acoustic alarm.
- By switching on the hazard warning system.
▶ LEDs pulse or LED flashes: system is armed.
▶ One LED flashes at short intervals: the doors, hood, or tailgate is not properly closed.

Even if these are not closed fully, the remaining items are locked and the LEDs pulse after approx. 10 seconds for approx. 16 minutes; afterwards, one LED flashes. The interior motion sensor is not activated.

▶ The LEDs go out after the vehicle is unlocked: the vehicle has not been tampered with in the meantime.
▶ The LEDs flash after the vehicle is unlocked until the remote control is inserted in the ignition, but for no longer than approx. 5 minutes: the vehicle has been tampered with in the meantime.

**Panic mode**
You can trigger the alarm system if you find yourself in a dangerous situation.

Press the button on the remote control for at least two seconds.

To switch off the alarm: press any button on the remote control.

**Tilt alarm sensor**
The tilt of the vehicle is monitored.
The alarm system responds in situations such as attempts to steal a wheel or tow the car.

**Interior motion sensor**
For the interior motion sensor to function properly, the windows and the glass sunroof must be closed.

**Avoiding unintentional alarms**
The tilt alarm sensor and interior motion sensor can be switched off together, such as in the following situations:
▶ In duplex garages.
▶ During transport on car-carrying trains, at sea or on a trailer.
▶ When animals are to remain in the vehicle.

**Switching off the tilt alarm sensor and interior motion sensor**
▶ Press the button on the remote control twice in succession.
▶ Lock the vehicle twice with the integrated key.

The LEDs flash in short succession for approx. 2 seconds. The tilt alarm sensor and interior motion sensor remain switched off until the vehicle is unlocked and locked again.

**GLASS SUNROOF, ELECTRICAL**

**General information**

⚠️ Danger of pinching
Monitor the closing process and make sure that the closing path of the glass sunroof is clear; otherwise, injuries may result.

⚠️ Take the remote control with you
Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the roof and injure themselves.

Convenient operation via:
▶ Door lock, refer to page 34
Tilting the glass sunroof

MINI Countryman:
▷ Press the switch back to the resistance point and hold.
  Both glass sunroofs are raised.
  Releasing stops the motion.
▷ With the ignition switched on, press the switch back past the resistance point.
  Both closed glass sunroofs are raised fully.
  Pressing again stops the motion.

MINI Paceman:
▷ Press the switch back to the resistance point and hold.
  The front glass sunroof is raised.
  Releasing stops the motion.
▷ With the ignition switched on, press the switch back past the resistance point.
  The front glass sunroof is fully raised.
  Pressing again stops the motion.

Opening, closing

MINI Countryman:
▷ In the raised position with the ignition switched on, press the switch back and hold.
  The front glass sunroof is opened. The rear glass sunroof is closed.
  Releasing stops the motion.

The same method is used to close the glass sunroof, in this case by pressing the switch forward.
The front glass sunroof remains in the raised position. The rear glass sunroof is raised. Pressing again closes both sunroofs completely.

MINI Paceman:
▷ In the raised position with the ignition switched on, press the switch back and hold.
  The front glass sunroof is opened.
  Releasing stops the motion.
The same method is used to close the glass sunroof, in this case by pressing the switch forward.
The front glass sunroof remains in the raised position. Pressing again closes the roof completely.

Roller sunblind
The roller sunblind can be opened and closed separately from the glass sunroof.

After a power failure
After a power failure, it could happen that the sunroof can only be raised. In this case, have the system initialized. The manufacturer of your MINI recommends having this work performed by the service center.

POWER WINDOWS

General information
⚠️ Danger of pinching
Monitor the closing process and make sure that the closing path of the window is clear; otherwise, injuries may result.

Opening Access, refer to page 37
Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the power windows and injure themselves.

If, after having been opened and closed a number of times in close succession, a window can only be closed, the system is overheated. Let the system cool down for several minutes with the ignition switched on or the engine running.

Opening, closing

Front windows

To open:
▷ Press the switch to the resistance point. The window opens while the switch is held.
▷ Press the switch beyond the resistance point. The window opens automatically in the radio ready state and higher.
Pressing the switch briefly to stop the opening procedure.

To close:
▷ Pull the switch to the resistance point. The window closes while the switch is held.
▷ Pull the switch beyond the resistance point. The window closes automatically.
Pressing the switch stops the motion.

MINI Countryman: rear windows

To open:
▷ Press the switch to the resistance point. The window opens while the switch is held.
▷ Press the switch beyond the resistance point. The window opens automatically in the radio ready state and higher.

To close:
▷ Pull the switch to the resistance point. The window closes while the switch is held.
▷ Pull the switch beyond the resistance point. The window closes automatically.
Pressing the switch stops the motion.

After the ignition is switched off

The windows can be operated for approx. 1 minute after the remote control is removed or the ignition is switched off.

Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the power windows and injure themselves.

Pinch protection system

If the closing force exceeds a specific value as a window closes, the closing action is interrupted.

The window reopens slightly.
Danger of pinching even with pinch protection

Even with the pinch protection system, check that the window’s closing path is clear; otherwise, the closing action may not stop in certain situations, e.g., if thin objects are present.

Do not use window accessories

Do not install any accessories in the range of movement of the windows; otherwise, the pinch protection system will be impaired.

Closing without the pinch protection system

Danger of pinching

Monitor the closing process and make sure that the closing path of the window is clear; otherwise, injuries may result.

If there is an external danger or, for example, if ice on the windows prevents a window from closing normally, the window can be closed manually.

1. Pull the switch past the resistance point and hold it there. Pinch protection is limited and the window reopens slightly if the closing force exceeds a certain value.

2. Pull the switch past the resistance point again within approx. 4 seconds and hold it there.

The window closes without pinch protection.

MINI Countryman: safety switch

With the safety switch, the rear windows are prevented from being opened or closed via the switches in the rear passenger area, such as by children.

Press the button. The LED lights up if the safety function is switched on.

Safety switch for rear operation

Press the safety switch when transporting children in the rear; otherwise, injury may result if the windows are closed without supervision.
ADJUSTING

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

SITTING SAFELY

The ideal seating position can make a vital contribution to relaxed, fatigue-free driving.

The seating position plays an important role in an accident in combination with:

▷ Safety belts, refer to page 46
▷ Head restraints, refer to page 48.
▷ Airbags, refer to page 81.

SEATS

Note before adjusting

⚠️ Do not adjust the seat while driving

Never attempt to adjust the driver’s seat while driving. The seat could respond with unexpected movement and the ensuing loss of vehicle control could lead to an accident.

⚠️ Do not incline the backrest too far to the rear

Do not incline the backrest on the front passenger side too far to the rear during driving. Otherwise, there is the danger of sliding under the safety belt in an accident. This would eliminate the protection normally provided by the belt.

Front seat adjustment

Forward/backward

Pull the lever, arrow 1, and slide the seat into the desired position, arrows 2.

After releasing the lever, move the seat forward or back slightly to make sure it engages properly.

Height

Pull the lever up or push it down repeatedly, arrows 1, until the desired height is reached, arrows.

Backrest

MINI Countryman:
Pull the lever, arrow 1, and apply your weight to the backrest or lift it off, as necessary.

MINI Paceman:

Pull the lever, arrow 1, and apply your weight to the backrest or lift it off, as necessary, arrows 2.

Lumbar support

You can also adjust the contour of the backrest to obtain additional support in the lumbar region.

The upper hips and spinal column receive supplementary support to help you maintain a relaxed, upright sitting position.

The graphic shows the MINI Countryman as an example.

Turn the wheel to increase or decrease the curvature.

**MINI Countryman: rear seat adjustment**

⚠️ Observe the following when adjusting

Do not adjust the rear seats during a trip; otherwise, there is a risk of passenger injury.

Make sure that the locking mechanisms of the rear seats engage properly. Otherwise the restraining effect of the safety belts during an accident could be reduced.

**Forward/backward**

Pull the lever and slide the seat into the desired position.

Release the lever and move the seat slightly forward or back so that it engages properly.

**Backrest**

Adjust the backrest tilt, refer to page 111.
Seat heating

Switching on
The temperature setting progresses one step through its control sequence each time you press the button. The maximum temperature is reached when three LEDs are lit.

If the trip is continued within approx. 15 minutes, the seat heating is activated automatically with the temperature set last.

The temperature is reduced, if need be, down to no heat in order to reduce the load on the battery. The LEDs remain lit.

Switching off
Press the button longer.

SAFETY BELTS

Number of safety belts
Your vehicle has been fitted with four or five safety belts for the safety of you and your passengers.

However, they can only offer protection when adjusted correctly.

Notes
Always make sure that safety belts are being worn by all occupants before driving away.

Although airbags enhance safety by providing added protection, they are not a substitute for safety belts.

The shoulder strap’s anchorage point will be correct for adult seat occupants of every build if the seat is correctly adjusted.

⚠️ One person per safety belt
Never allow more than one person to wear a single safety belt. Never allow infants or small children to ride on a passenger's lap.

⚠️ Putting on the belt
Lay the belt, without twisting, snugly across the lap and shoulders, as close to the body as possible. Make sure that the belt lies low around the hips in the lap area and does not press on the abdomen. Otherwise, the belt can slip over the hips in the lap area in a frontal impact and injure the abdomen.

The safety belt must not lie across the neck, rub on sharp edges, be routed over solid or breakable objects, or be pinched.

⚠️ Reduction of restraining effect
Avoid wearing clothing that prevents the belt from fitting properly, and pull the shoulder belt periodically to readjust the tension across your lap; otherwise, the retention effect of the safety belt may be reduced.

Buckling the belt
MINI Countryman:

MINI Paceman:
Make sure you hear the latch plate engage in the belt buckle.
The shoulder strap's anchorage point will be correct for adult seat occupants of every build if the seat is correctly adjusted, refer to page 44.

**Unbuckling the belt**
1. Hold the belt firmly.
2. Press the red button in the belt buckle.
3. Guide the belt back into its reel.

**Securing the buckle tongues**
If the front passenger seat is not occupied, slide the buckle tongue up to the belt stop knob with the clip.
When the outer rear seats are not occupied, the buckle tongues of the rear seats can be slid up to the cargo area trim with the clip.
This helps avoid annoying noises when driving.

**MINI Countryman: center safety belt of rear seat**
The belt buckle embossed with the word CENTER is intended exclusively for use by passengers riding in the center position.
If the center safety belt in the rear is used, the backrests must be locked, refer to page 112.
The safety belt will not have a restraining effect if the backrest is not locked.

**Belt holder in the headliner**
The holder for the safety belt is located in the headliner.

1 Opening for the safety belt
2 Holder for the small buckle tongue

Take the small buckle tongue out of the holder. Move both buckle tongues downward.

**Closing**
Insert the small buckle tongue 2 of the safety belt into the small belt buckle 3.

**Opening**
Press the red button on the small belt buckle 3 with buckle tongue 1.
When the center safety belt is locked:
Press the red button 3 with the buckle tongue of the outer left safety belt.
Putting on the belt

1 Large buckle tongue
2 Small buckle tongue
3 Small belt buckle
4 Large belt buckle

Buckle tongue 1 must be inserted in belt buckle 4. Make sure you hear the buckle tongue engage in the belt buckle.

Insert the buckle tongue into the belt buckle in such a way that the belt lies smoothly against the body of the buckled person and is not twisted.

Stowing the center safety belt

If the center seat is not occupied, insert the belt buckles 3 and 4 into the respective holders, arrows.

Move the buckle tongues to the belt holder on the headliner, refer to page 47, and insert them into the provided holders.

Safety belt reminder for driver's seat and front passenger seat

The indicator lamps light up and a signal sounds. In addition, a message appears on the Control Display. Check whether the safety belt has been fastened correctly.

Damage to safety belts

In the case of strain caused by accidents or damage:

Have the safety belts, including the safety belt tensioners, replaced and have the belt anchors checked.

Checking and replacing safety belts

Have the work performed only by your service center; otherwise, it cannot be ensured that this safety feature will function properly.

HEAD RESTRAINTS

Correctly set head restraint

A correctly adjusted head restraint reduces the risk of spinal injury in the event of an accident.

Adjusting the head restraint

Correctly adjust the head restraints of all occupied seats; otherwise, there is an increased risk of injury in an accident.

Height

Adjust the head restraint so that its center is approx. at ear level.

MINI Countryman: the center rear head restraint is not height adjustable.
Height adjustment

To raise: pull.
To lower: press the button, arrow 1, and push the head restraint down until it engages.
MINI Countryman: additionally press button 2 on the rear head restraints only if you wish to remove them.

Removing

Only remove the head restraint if no one will be sitting in the seat in question.

⚠️ Before transporting passengers
Reinstall the head restraint before transporting anyone in the seat; otherwise, the protective function of the head restraint is unavailable. ⚠️

Rear

1. Pull the head restraint upward as far as possible.
2. Fold the backrest forward slightly.
3. Press button 1 and pull out the head restraint all the way to the stop.
   MINI Countryman: additionally press button 2 using a suitable tool.
4. Pull out the head restraint completely.
5. Fold back the rear seat backrest.

MIRRORS

Exterior mirrors

General information
The mirror on the passenger side is more curved than the driver's mirror.

⚠️ Estimating distances correctly
Objects reflected in the mirror are closer than they appear. Do not estimate the distance to the traffic behind you based on what you see in the mirror, as this will increase your risk of an accident. ⚠️

Front

1. Pull the head restraint upward as far as possible.
2. MINI Countryman: tilt the backrest back slightly.
At a glance

1  Adjusting
2  Selecting the left/right mirror
3  Folding the mirror in and out

Selecting a mirror

To change to the other mirror: slide the mirror switch over.

Adjusting electrically

The setting corresponds to the direction in which the button is pressed.

Adjusting manually

If an electrical malfunction occurs, for example, press the edges of the mirror glass.

Folding the mirror in and out

Press button 3.
The mirror can be folded in up to a vehicle speed of approx. 20 mph/30 km/h.

For example, this is advantageous
▷  In car washes.
▷  In narrow streets.
▷  For folding back mirrors that were folded away manually.

⚠  Fold in the mirror in a car wash
Before entering an automatic car wash, fold in the exterior mirrors by hand or with the button; otherwise, they could be damaged, depending on the width of the vehicle.

Automatic heating

Both exterior mirrors are heated automatically while the engine is running or the ignition is switched on when the external temperature is below a certain value.

Interior rearview mirror

To reduce the blinding effect from the rear when driving at night: turn the knob.

Interior rearview and exterior mirrors, automatic dimming feature

Two photocells are used for control:
▷  In the mirror frame, see arrow.
▷  On the back of the mirror.

For proper operation:
▷  Keep the photocells clean.
Do not cover the area between the inside rearview mirror and the windshield.

Do not apply stickers to the windshield in front of the mirror.

**STEERING WHEEL**

**Adjusting**

⚠️ Do not adjust while driving

Do not adjust the steering wheel while driving; otherwise, an unexpected movement could result in an accident.

1. Fold the lever down.

2. Move the steering wheel to the preferred height and angle to suit your seating position.

3. Fold the lever back.

⚠️ Do not use force to swing the lever back.

Do not use force to swing the lever back up; otherwise, the mechanism will be damaged.
TRANSPORTING CHILDREN SAFELY

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

THE RIGHT PLACE FOR CHILDREN

Notes

⚠️ Children in the vehicle
Do not leave children unattended in the vehicle; otherwise, they could endanger themselves and other persons, e.g., by opening the doors.

Children should always be in the rear

Accident research shows that the safest place for children is on the rear seat.

⚠️ Transporting children in the rear
Transport children younger than 13 years of age or shorter than 5 ft/150 cm in the rear only, using child restraint fixing systems suitable for the age, weight, and height of the child; otherwise, there is an increased risk of injury in an accident.

Children 13 years of age or older must wear a safety belt as soon as a suitable child restraint fixing system can no longer be used, due to their age, weight and size.

⚠️ Installing child seats
Only install child seats in the rear when the rear seat backrest is folded all the way back and engaged; otherwise, there is an increased risk of injury in an accident.

Children on the front passenger seat

Front passenger airbags
Should it be necessary to use a child restraint fixing system on the front passenger seat, make sure that the front and side airbags on the front passenger side are deactivated, refer to page 82.

⚠️ Deactivating the front passenger airbags
If a child restraint fixing system is used in the front passenger seat, the front passenger airbags must be deactivated; otherwise, there is an increased risk of injury to the child when the airbags are triggered, even with a child restraint fixing system.

INSTALLING CHILD RESTRAINT FIXING SYSTEMS

Before mounting

MINI Countryman: before mounting a child restraint fixing system on the rear seats, move the seats into the rearmost positions.

Adjust the inclination of the center backrest to that of the respective outer backrest.

After mounting the child restraint fixing system on the respective outer rear seat, adjust the backrest forward, if necessary, to ensure that the backrest is in contact with the child restraint fixing system. Rear seat backrests, refer to page 111.
Notes

Manufacturer’s information for child restraint fixing systems
To select, mount and use child restraint fixing systems, observe the information provided by the system manufacturer; otherwise, the protective effect can be impaired.

On the front passenger seat

Deactivating the airbags
After installing a child restraint fixing system on the front passenger seat, ensure that the front, side, and knee airbags on the front passenger side are deactivated.

Deactivating the front passenger airbags
If a child restraint fixing system is used in the front passenger seat, the front passenger airbags must be deactivated; otherwise, there is an increased risk of injury to the child when the airbags are triggered, even with a child restraint fixing system.

Seat position and height
Before installing a child restraint fixing system, move the front passenger seat as far back as possible and adjust its height to the highest position to obtain the best possible position for the belt and to offer optimal protection in the event of an accident.

Do not change this seat position once it has been set.

Child seat security

The graphic shows the MINI Countryman as an example.
The rear safety belts and the safety belt for the front passenger can be locked to prevent extension in order to permit attachment of child restraint fixing systems.

To lock the safety belt
1. Secure the child restraint fixing system with the belt.
2. Pull out the belt webbing completely.
3. Allow the belt webbing to be pulled in and pull it taut against the child restraint fixing system.

The safety belt is locked.

To unlock the safety belt
1. Open the belt buckle.
2. Remove the child restraint fixing system.
3. Allow the belt webbing to be pulled in completely.
   Center safety belt: unlock belt buckle 3 in addition, refer to page 48.
   Guide the safety belt to the holder on the headliner.

LATCH CHILD RESTRAINT FIXING SYSTEM

LATCH: Lower Anchors and Tethers for Children.
**Notes**

⚠️ Manufacturer’s information for LATCH child restraint fixing systems

To mount and use the LATCH child restraint fixing systems, observe the operating and safety information from the system manufacturer; otherwise, the level of protection may be reduced.⚠️

**Mounts for the lower LATCH anchors**

The lower anchors may be used to attach the CRS to the vehicle seat up to a combined child and CRS weight of 65 lb/30 kg when the child is restrained by the internal harnesses.

⚠️ Correctly engage the lower LATCH anchors

Make sure that the lower LATCH anchors have properly engaged and that the child restraint fixing system is resting snugly against the backrest; otherwise, the degree of protection offered may be reduced.⚠️

Before installing the child seat, pull the belt out of the area for the child restraint fixing system.

**MINI Countryman**

The mounts for the lower LATCH anchors are located at the points indicated by the arrows.

**MINI Paceman**

The mounts for the lower LATCH anchors are located at the points indicated by the arrows.

The corresponding symbol shows the mounts for the lower LATCH anchors.

**Mounting LATCH child restraint fixing systems**

1. Mount the child restraint fixing system; refer to the operating instructions of the system.
2. Ensure that both LATCH anchors are properly connected.

**CHILD RESTRAINT FIXING SYSTEMS WITH AN UPPER RETAINING STRAP**

**Mounting points**

⚠️ LATCH mounting points

Only use the mounting points for the upper LATCH retaining strap to secure child restraint systems; otherwise, the mounting points could be damaged.⚠️
MINI Countryman

There are two additional mounting points for child restraint fixing systems with an upper retaining strap, arrows.

MINI Paceman

There are two additional mounting points for child restraint fixing systems with an upper retaining strap, arrows.

Guide of the upper LATCH retaining strap

⚠ Retaining strap

Make sure the upper retaining strap does not run over sharp edges and is not twisted as it passes to the top anchor. Otherwise, the strap will not properly secure the child restraint fixing system in the event of an accident.▶

Outer seats:

1. Direction of travel
2. Head restraint
3. Cargo area floor
4. Hook for upper retaining strap
5. Mounting point
6. Backrest
7. Upper retaining strap of child restraint fixing system

MINI Countryman, center seat

1. Direction of travel
2. Head restraint
3. Hook for upper retaining strap
4. Mounting point
5. Cargo area floor
6. Backrest
7. Upper retaining strap of child restraint fixing system
Attaching the upper retaining strap to the mounting point

1. Slide the head restraint upward.
2. Center seat: fold the cargo area floor forward.
3. Guide the upper retaining strap between the supports of the head restraint.
4. Attach the upper retaining strap to the mounting point with the hook.
5. Slide the head restraint into the bottom position.
6. Pull the upper retaining strap taut.

MINI COUNTRYMAN: LOCKING DOORS AND WINDOWS

Rear doors

Push the locking lever on the rear doors down. The door can now be opened from the outside only.

Safety switch for power window

This locks the rear window switches so that the windows cannot be operated from the rear. Press the safety switch, refer to page 43.
DRIVING

VEHICLE EQUIPMENT
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

IGNITION LOCK

Insert the remote control into the ignition lock

Insert the remote control all the way into the ignition lock.

Radio ready state is switched on. Individual electrical consumers can operate.

Removing the remote control from the ignition lock

Do not forcibly pull the remote control out of the ignition lock

Do not forcibly pull the remote control out of the ignition lock as this may cause damage.

Before removing the remote control, push it all the way in to release the locking mechanism. The ignition is switched off if it was on.

Steptronic transmission
You can only take out the remote control if transmission position P is engaged: interlock.

START/STOP BUTTON

Pressing the Start/Stop button switches the ignition on or off and starts the engine.

The engine starts when the Start/Stop button is pressed and:

▷ Manual transmission: the clutch pedal is depressed.
▷ Steptronic transmission: the brake pedal is depressed.

Radio ready state
Individual electrical consumers can operate.

Radio ready state is switched off automatically:

▷ When the remote control is removed from the ignition lock.
▷ With Comfort Access, refer to page 37, by pressing the button on the door handle or the button on the remote control.
▷ After a certain period of time.
**Ignition on**
All electrical consumers can operate. Most indicator and warning lights light up for different lengths of time.
To save battery power when the engine is off, switch off the ignition and any unnecessary electronic systems/power consumers.

**Radio ready state and ignition off**
All indicator and warning lights in the displays go out.
The ignition switches off automatically when the driver's door is opened. Pressing the Start/Stop button again switches the ignition back on.
For example, the ignition is not switched off in the following situations:
▷ Depress the clutch or brake pedal.
▷ The low beams are switched on.

---

**STARTING THE ENGINE**

**General information**

⚠ Enclosed areas

Do not let the engine run in enclosed areas; otherwise, breathing of exhaust fumes may lead to loss of consciousness and death.
The exhaust gases contain carbon monoxide, an odorless and colorless but highly toxic gas.⚠

⚠ Unattended vehicle

Do not leave the car unattended with the engine running; otherwise, it presents a potential source of danger.
Before leaving the car with the engine running, shift to neutral or engage transmission position P and set the parking brake firmly; otherwise, the vehicle may begin to roll.⚠

⚠ Frequent starting in quick succession

Avoid repeated futile attempts at starting the car and avoid starting the car frequently in quick succession. Otherwise, the fuel is not burned or is inadequately burned, and there is the danger of overheating and damaging the catalytic converter.⚠

Do not wait for the engine to warm-up while the vehicle remains stationary; start driving right away, but at moderate engine speeds.
Do not depress the accelerator when starting the engine.

**Starting the engine**

**Manual transmission**
Remote control in the ignition lock or with Comfort Access inside the vehicle, refer to page 37.
1. Depress the brake pedal.
2. Depress the clutch pedal.
3. Press the Start/Stop button.
The ignition is activated automatically for a certain time and is stopped as soon as the engine starts.

**Steptronic transmission**
Remote control in the ignition lock or, with Comfort Access, inside the vehicle, refer to page 37.
1. Depress the brake pedal.
2. Move the selector lever to position P or N.
3. Press the Start/Stop button.
The ignition is activated automatically for a certain time and is stopped as soon as the engine starts.

ENGINE STOP

General information

⚠️ Take the remote control with you
Take the remote control with you when leaving the vehicle so that children, for example, cannot operate the windows and injure themselves. ◄

⚠️ Set the parking brake and further secure the vehicle as required
Set the parking brake firmly when parking; otherwise, the vehicle may roll. On steep upward and downward inclines, further secure the vehicle, for example, by turning the steering wheel in the direction of the curb. ◄

Before driving into a car wash
To make it possible for the vehicle to roll in an automatic car wash, follow the information on Washing in automatic car washes, refer to page 250.

Switching off the engine

Manual transmission
1. With the vehicle at a standstill, press the Start/Stop button.
2. Shift into first gear or reverse.
3. Set the parking brake firmly.
4. Remove the remote control from the ignition lock.

Steptronic transmission
1. Engage transmission position P with the vehicle stopped.
2. Press the Start/Stop button.
3. Set the parking brake firmly.
4. Remove the remote control from the ignition lock.

PARKING BRAKE

The concept
The parking brake is primarily intended to prevent the vehicle from rolling while parked; it brakes the rear wheels.
Also follow the instructions under Switching off the engine, refer to page 59.

Setting
The lever engages automatically.

Releasing
Pull up slightly, press the button, and lower the lever.

Notes
⚠️ Using the parking brake while driving
If it should become necessary to use the parking brake while driving, do not pull the parking brake too forcefully. Keep the button on the parking brake lever pressed at all times.
Excessive application of the parking brake can block the rear wheels and lead to fishtailing of the vehicle.

The brake lights do not light up when the parking brake is pulled.

**TURN SIGNAL, HIGH-BEAMS, HEADLIGHT FLASHER**

1. Turn signal
2. Switching on the high-beams
3. Switching off the high-beams/headlight flasher

**Turn signal**
Press the lever beyond the resistance point.
To switch off manually, press the lever to the resistance point.

Unusually rapid flashing of the indicator lamp indicates that a turn signal bulb has failed.

**Signaling a turn briefly**
Press the lever to the resistance point and hold it there for as long as you want the turn signal to flash.

**Triple turn signal activation**
Press the lever to the resistance point.
The turn signal flashes three times.
This function can be activated or deactivated:
1. "Settings"
2. "Lighting"
3. "Triple turn signal"

The setting is stored for the remote control currently in use.

**WASHER/WIPER SYSTEM**

**Notes**

⚠️ Do not switch on the wipers if frozen
Do not switch on the wipers if they are frozen onto the windshield; otherwise, the wiper blades and the windshield wiper motor may be damaged.

⚠️ Do not use the wipers on a dry windshield
Do not use the wipers on a dry windshield; otherwise, the wiper blades may wear more rapidly or become damaged.

**At a glance**

1. Switching on wipers
2. Switching off wipers or brief wipe
3. Activating/deactivating intermittent wipe or the rain sensor
4. Cleaning the windshield and headlights

Switching on wipers
Press the wiper lever upward, arrow 1.
The lever automatically returns to its initial position when released.

Normal wiper speed
Press up once.
The system switches to operation in the intermittent mode when the vehicle is stationary.

Fast wiper speed
Press up twice or press once beyond the resistance point.
The system switches to normal speed when the vehicle is stationary.

Switching off wipers or brief wipe
Press the wiper lever down, arrow 2.
The lever automatically returns to its initial position when released.
▷ Brief wipe: press down once.
▷ To switch off normal wipe: press down once.
▷ To switch off fast wipe: press down twice.

Intermittent wipe or rain sensor
If the car is not equipped with a rain sensor, the intermittent-wipe time is a preset.
If the car is equipped with a rain sensor, the time between wipes is controlled automatically and depends on the intensity of the rainfall.
The rain sensor is mounted on the windshield, directly in front of the interior rearview mirror.

Deactivate the rain sensor in car washes
Deactivate the rain sensor when passing through an automatic car wash; otherwise, damage could be caused by undesired wiper activation.

Activating intermittent wipe or rain sensor
Press the button, arrow 3.

The symbol is shown in the tachometer.

Setting the sensitivity of the rain sensor
1. Switch on the ignition, refer to page 58.
2. Press the button on the turn indicator lever repeatedly until "SET/INFO" is displayed.
3. Press and hold the button until the display changes.
4. Press the button repeatedly until the symbol and "SET" are displayed.
5. Press and hold the button until the display changes.

6. Press the button to select the desired sensitivity.

7. Wait or hold the button until the display changes.
   The settings were stored.

Deactivating intermittent wipe or rain sensor
Press the button again, arrow 3.

Cleaning the windshield and headlights
Pull the lever, arrow 4.
The system sprays washer fluid on the windshield and activates the wipers briefly.
When the vehicle lighting system is switched on, the headlights are cleaned at regular and appropriate intervals.

Do not use the washer system at freezing temperatures
Do not use the washers if there is any danger that the fluid will freeze on the windshield; otherwise, your vision could be obscured. For this reason, use antifreeze.
Avoid using the washer when the reservoir is empty; otherwise, you could damage the pump.

Windshield washer nozzles
The windshield washer nozzles are heated automatically while the engine is running or the ignition is switched on.

Rear window wiper

0 Resting position
1 Switching on intermittent wipe
   Turn the cap to level 1.
   When reverse gear is engaged, the system switches to continuous operation.
2 Cleaning the rear window with intermittent wipe
   Turn the cap further to level 2 and hold.
3 Cleaning the rear window in the resting position
   Turn the cap to level 3 and hold.

The rear window wiper does not move if the cap is in position 1 before the ignition is switched on.
To switch on the rear window wiper:
1. Move the cap to its basic position.
2. Select the required position again.
Do not use the washing mechanisms when the washer fluid reservoir is empty.

Do not use washing mechanisms when the washer fluid reservoir is empty, otherwise you will damage the washer pump.

WASHER FLUID

General information

Antifreeze for washer fluid

Antifreeze is flammable and can cause injuries if used improperly. Therefore, keep it away from sources of ignition.

Only keep it in the closed original container and inaccessible to children.

Follow the notes and instructions on the container.

United States: The washer fluid mixture ratio is regulated by the U.S. EPA and many individual states; do not exceed the allowable washer fluid dilution ratios limits that apply. Follow the usage instructions on the washer fluid container. Use BMW’s Windshield Washer Concentrate or the equivalent.

Washer fluid reservoir

Adding washer fluid

Only add washer fluid when the engine is cool, and then close the cover completely to avoid contact between the washer fluid and hot engine parts.

Otherwise, there is the danger of fire and a risk to personal safety if the fluid is spilled.

All washer nozzles are supplied from one reservoir.

The recommended minimum filling quantity is 0.2 US gal/1 liter.

Fill with a mixture of window washing concentrate and water; if needed, add antifreeze according to the manufacturer instructions.

Mix the washer fluid before adding to maintain the correct mixing ratio.

Do not fill in undiluted window washing concentrate and do not fill in pure water; this could damage the washer system.

Do not mix window washing concentrate from different manufacturers; this could cause the washer nozzles to clog.

MANUAL TRANSMISSION

Pay attention to the shift plane

When shifting into 5th or 6th gear, push the gearshift lever to the right; otherwise inadvertent shifting into the 3rd or 4th gear could lead to engine damage.
Reverse gear
Select only when the vehicle is stationary. When the gearshift lever is pressed to the left, a slight resistance needs to be overcome.

STEPTRONIC TRANSMISSION
In addition to the fully automatic mode, gears can also be shifted manually using Steptronic, refer to page 65.

Parking the vehicle
Secure the vehicle.
Before leaving the vehicle with the engine running, move the selector lever to position P and set the handbrake; otherwise, the vehicle will begin moving.

Disengaging the remote control
To remove the remote control from the ignition lock, first move the selector lever to position P and switch off the engine: interlock. Remove the remote control from the ignition lock, refer to page 57.

Selector lever positions
P R N D M/S + –

Displays in the tachometer
The selector lever position is displayed and the engaged gear, such as M4, is displayed in manual mode.

Changing selector lever positions
- With the ignition switched on or the engine running, the selector lever can be moved out of position P.
- When the vehicle is stationary, step on the brake before shifting out of P or N; otherwise, the selector lever is locked: shiftlock.

Press on the brake pedal until you start driving.
To prevent the vehicle from creeping after you select a driving position, maintain pressure on the brake pedal until you are ready to start.

A lock prevents accidental shifting into selector lever positions R and P.
To override the lock, press the button on the front of the selector lever, see arrow.

P Park
Select only when the vehicle is stationary. The front wheels are blocked.

R is Reverse
Select only when the vehicle is stationary.

N is Neutral
For example, engage this position in a car wash. The vehicle can roll.

D Drive
Position for normal vehicle operation. All forward gears are selected automatically.
Under normal operating conditions, fuel consumption is lowest when you are driving in position D.

**Kickdown**
Kickdown is used to achieve maximum driving performance. Press on the accelerator beyond the resistance point at the full throttle position.

**Sport program and manual mode M/S**

**Activating the Sport program**
Move the selector lever from position D toward the left into the M/S shifting slot.

The Sport program is activated and DS is displayed. This position is recommended for a performance-oriented driving style.

To deactivate the Sport program or manual mode M/S, move the selector lever to the right into position D.

**Activating the M/S manual mode**
Move the selector lever from position D toward the left into the M/S shifting slot.

Push the selector lever forward or backward.

Manual mode becomes active and the gear is changed.

The tachometer displays the engaged gear, e.g. M1.

- To shift up: press the selector lever backward.
- To shift down: press the selector lever forward.

The vehicle only shifts up or down at appropriate engine and road speeds, e.g., it does not shift down if the engine speed is too high. The selected gear is briefly displayed in the instrument panel, followed by the current gear.

**Shifting gears using the shift paddles on the steering wheel**
The shift paddles on the steering wheel allow you to shift gears quickly while keeping both hands on the steering wheel.

- When the shift paddles on the steering wheel are used to shift gears while in automatic mode, the transmission switches to manual mode.
- If the shift paddles are not used to accelerate or shift gears for a certain amount of time, the transmission switches back to automatic mode.

If the selector lever is in the M/S gear plane, manual mode remains active.

- Pull one of the two shift paddles: The transmission shifts up.
- Press one of the two shift paddles: The transmission shifts down.

The vehicle only shifts up or down at appropriate engine and road speeds, e.g., it does not shift down if the engine speed is too high. The selected gear is briefly displayed in the instrument panel, followed by the current gear.
Manually unlocking the selector lever lock

If the selector lever is locked in position P although the ignition is switched on, the brake is depressed, and the button on the selector lever is pressed, the selector lever lock can be overridden:

1. Switch off the ignition.
2. Unclip the sleeve of the selector lever.
3. Pull the sleeve up over the selector lever until the sleeve is inside out.
   - Pull off the plug-in cable connector if necessary.
4. Insert the pulling hook 1 into the loop on the passenger side.
   - The pulling hook is found in the vehicle document portfolio or in the pouch of the wheel change set, refer to page 242.
5. Pull the loop upward.
6. Move the selector lever into the desired position, pressing the button on the front of the selector lever.

⚠️ Set the parking brake

Manually unlock the selector lever lock for towing only. Before manually unlocking the selector lever lock, pull the parking brake firmly; otherwise, the vehicle may roll away and cause personal injury or property damage.
DISPLAYS

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

ODOMETER, EXTERNAL TEMPERATURE DISPLAY, CLOCK

At a glance

1 Current speed
2 Odometer, trip odometer, external temperature, time
3 Resetting the trip odometer

Press the button on the turn indicator lever to open information in display area 2.

The following information is displayed consecutively:

▷ Trip odometer
▷ Time
▷ External temperature

Trip odometer

Displaying the trip odometer
Press button 3 briefly.

Resetting the trip odometer
1. Press button 3 briefly.
   The trip odometer is displayed.
2. Press button 3 again.
   The trip odometer is reset.

Time

Set the time, refer to page 71.

External temperature, external temperature warning

If the display drops to +37 °F/+3 °C, a signal sounds and a warning light lights up. There is the increased danger of ice.

⚠️ Ice on roads

Even at temperatures above +37 °F/+3 °C, there can be a risk of ice on roads.

Therefore, drive carefully on bridges and shady roads, for example, to avoid the increased danger of an accident.⚠️

Units of measure

To set the respective units of measure, miles or km for the odometer and °C or °F for the external temperature, refer to page 71.
TACHOMETER

It is imperative that you avoid engine speeds in the red warning field. In this range, the fuel supply is interrupted to protect the engine.

COOLANT TEMPERATURE

A warning lamp will come on if the coolant, and therefore the engine, becomes too hot. In addition, a message will appear on the Control Display.

Check the coolant level, refer to page 232.

FUEL GAUGE

The arrow next to the fuel pump symbol on the fuel gauge indicates the side of the vehicle with the fuel filler flap.

The vehicle inclination may cause the display to vary.

Notes on refueling, refer to page 212.

Filling capacities, refer to page 261.

Range

After the reserve range is reached:

▷ The remaining LEDs change from orange to red, arrow.
▷ A message is briefly displayed on the Control Display.
▷ The remaining range is shown on the tachometer.
▷ When a dynamic driving style is used, such as when corners are taken rapidly, engine functions are not ensured.

The message appears continuously below a range of approx. 30 miles/50 km.

Refuel promptly

At the latest, refuel at a range below 30 miles/50 km; otherwise, the engine function is not ensured and damage may occur.

COMPUTER

Opening information in the tachometer

Press the button on the turn indicator lever.

Overview of the information

The following information is displayed consecutively by repeatedly pressing the button on the turn indicator lever:

▷ Range.
▷ Average fuel consumption.
▷ Current fuel consumption.
▷ Average speed.
To set the corresponding units of measure, refer to page 71.

**Information in detail**

**Range**

Displays the estimated cruising range available with the remaining fuel.

It is calculated based on your driving style over the last 18 miles/30 km.

**Average fuel consumption**

This is calculated for the period during which the engine is running.

With the trip computer, refer to page 69, the average consumption can be displayed for an additional distance.

To reset the average consumption: press the button on the turn indicator lever for approx. 2 seconds.

**Current fuel consumption**

Displays the current fuel consumption. You can check whether you are currently driving in an efficient and environmentally-friendly manner.

**Average speed**

Periods in which the vehicle was parked and the engine was switched off manually are not included in the average speed calculations.

With the trip computer, refer to page 69, the average speed can be displayed for an additional distance.

To reset the average speed: press the button on the turn indicator lever for approx. 2 seconds.

**Displays on the Control Display**

Display the computer or trip computer on the Control Display.

1. "Vehicle Info"

2. "Onboard info" or "Trip computer"

Displays on the "Onboard info":

- Range.
- Distance to destination.
- Estimated time of arrival if a destination was entered in the navigation system.

Displays on the "Trip computer":

- Departure time.
- Trip duration.
- Trip distance.

Both displays show:

- Average fuel consumption.
- Average speed.
Resetting the fuel consumption and speed

Resetting the values for average speed and average fuel consumption:

1. Select the respective menu item and press the MINI joystick.
2. Press the MINI joystick again to confirm your selection.

Resetting the trip computer

Resetting all values:

1. "Vehicle Info"
2. "Trip computer"
3. "Reset"

SETTINGS AND INFORMATION

Operating concept

Some settings and information can only be created or opened while the ignition is switched on, the vehicle is standing, and the doors are closed.

1. Button for:
   - Selecting the display.
   - Setting values.
   - Confirming the selected display or set values.
   - Calling up computer information 68.

Exiting displays

1. Press the button on the turn indicator lever repeatedly until "HOME" is displayed.
2. Hold the button down.
   The current speed is displayed again.
   Displays are also exited if no entries are made within approx. 8 seconds.
Next setting or information

1. Within a setting or information display, press the button on the turn indicator lever repeatedly until "NEXT" is displayed.
2. Hold the button down.
   Direct change to the next setting or piece of information.

UNITS OF MEASURE

The units of measure, such as for fuel consumption, route/distance, and temperature, can be changed. The settings are stored for the remote control currently in use.

1. "Settings"
2. "Language/Units"

3. Select the desired menu item.
4. Select the desired unit.

CLOCK

Setting the time

1. "Settings"

2. "Time/Date"

3. "Time:"

4. Turn the MINI joystick to set the hours and press the MINI joystick.
5. Turn the MINI joystick to set the minutes and press the MINI joystick.

The time is stored.

Setting the time format

1. "Settings"
2. "Time/Date"
3. "Format:"
4. Select the desired format.
The time format is stored.
The settings are stored for the remote control currently in use.

**Setting the time zone**
1. "Settings"
2. "Time/Date"
3. "Time zone:"
4. Turn the MINI joystick until the desired time zone is displayed and press the MINI joystick.
The time zone is stored.

**DATE**

**Setting the date**
1. "Settings"
2. "Time/Date"
3. "Date:"
4. Turn the MINI joystick until the desired day is displayed and press the MINI joystick.
5. Make the necessary settings for the month and year.
The date is stored.

**Setting the date format**
1. "Settings"
2. "Time/Date"

3. "Format:"
4. Select the desired format.

The settings are stored for the remote control currently in use.

**SETTINGS ON THE CONTROL DISPLAY**

**Language**

**Setting the language**
1. "Settings"
2. "Language/Units"
3. "Language:"
4. Select the desired language.
The setting is stored for the remote control currently in use.

**Setting the voice dialog**
Voice dialog for the voice activation system, refer to page 25.
Brightness
The brightness is automatically adapted to the ambient lighting conditions. However, the basic setting can be changed when the low beams are switched on.

1. "Settings"
2. "Control display"
3. "Brightness"

4. Turn the MINI joystick until the desired setting is selected.
5. Press the MINI joystick.
The setting is stored for the remote control currently in use.
Depending on the light conditions, the brightness control may not be clearly visible.

SERVICE REQUIREMENTS

The remaining driving distance and the date of the next scheduled service are displayed briefly immediately after you start the engine or switch on the ignition.

The current service requirements can be read out from the remote control by the service specialist.

Detailed information on service requirements
More information on the scope of service required can be displayed on the Control Display.

1. "Vehicle Info"
2. "Vehicle status"

3. "Service required"
Required maintenance procedures and legally mandated inspections are displayed.
Additional information can be displayed on each entry:
Select the entry and press the MINI joystick.
To exit from the menu:
Move the MINI joystick to the left.

Symbols

<table>
<thead>
<tr>
<th>Symbols</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![OK icon]</td>
<td>No service is currently required.</td>
</tr>
<tr>
<td>![Triangle icon]</td>
<td>The deadline for service or a legally mandated inspection is approaching.</td>
</tr>
<tr>
<td>![Double Triangle icon]</td>
<td>The service deadline has already passed.</td>
</tr>
</tbody>
</table>
Entering appointment dates
Enter the dates for the required inspections.
Make sure the date on the Control Display is set correctly.

1. "Vehicle Info"
2. "Vehicle status"
3. "Service required"
4. "§ Vehicle inspection"
5. Open the menu for entering the deadline.
6. "Date:"
7. Create the settings.
8. Press the MINI joystick to apply the setting.
   The year is highlighted.
9. Turn the MINI joystick to create the setting.
10. Press the MINI joystick to apply the setting.
    The date entry is stored.

To exit from the menu:
Move the MINI joystick to the left.

CHECK CONTROL

The concept
The Check Control monitors vehicle functions and alerts you to any malfunctions in the systems being monitored.

A Check Control message consists of indicator and warning lamps in the instrument cluster and, in some circumstances, an acoustic signal and text messages at the top of the Control Display.

Indicator/warning lamps

The indicator and warning lamps can light up in a variety of combinations and colors in display area 1 or 2.

Several of the lamps are checked for proper functioning and light up temporarily when the engine is started or the ignition is switched on.

⚠️ The symbol indicates that Check Control messages have been stored. The Check Control messages can be displayed later.
Text messages
Text messages at the upper edge of the Control Display in combination with a symbol in the instrument cluster explain a Check Control message and the meaning of the indicator and warning lamps.

Supplementary text messages
Additional information, such as on the cause of a fault or the required action, can be called up via Check Control.

In urgent cases, this information will be shown as soon as the corresponding light comes on.

Hiding Check Control messages
Press the button on the turn indicator lever.

Some Check Control messages are displayed continuously and are not cleared until the malfunction is eliminated. If several malfunctions occur at once, the messages are displayed consecutively.

They are marked with the symbol shown here.

Other Check Control messages are hidden automatically after approx. 20 seconds. However, they are stored and can be displayed again later.

They are marked with the symbol shown here.

Viewing stored Check Control messages
The stored Check Control messages can only be displayed while the driver's door is closed.

1. Press the button on the turn indicator lever repeatedly until "SET/INFO" is displayed.
2. Press and hold the button until the display changes.
3. Press the button repeatedly until the corresponding symbol and "CHECK INFO" appear on the display.
4. Press and hold the button.
   If there is no Check Control message, this is indicated by "CHECK OK".
   If a Check Control message has been stored, the corresponding message is displayed.
The text message is also displayed on the Control Display.

5. Press the button to check for other messages.

Displaying on the Control Display

1. "Vehicle Info"
2. "Vehicle status"
3. "Check Control"

4. Select the text message.
LAMPS

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AT A GLANCE

0 Lamps off / daytime running lights
1 Parking lights and daytime running lights
2 Low-beam headlights and welcome lights
3 Automatic headlight control, Adaptive Light Control, daytime running lights, and welcome lights

PARKING LIGHTS/LOW BEAMS, HEADLIGHT CONTROL

General information

When the driver’s door is opened with the ignition switched off, the exterior lighting is automatically switched off when the light switch is in position 0, 2, or 3.

Switch on the parking lights if necessary, switch position 1.

Parking lights

Switch position 1: the vehicle lights light up on all sides.

Do not use the parking lights for extended periods; otherwise, the battery may become discharged and it would then be impossible to start the engine.

When parking, it is preferable to switch on the one-sided roadside parking lights, refer to page 78.

Low beams

Switch position 2: the low beams are lit when the ignition is switched on.

Automatic headlight control

Switch position 3: the low beams are switched on and off automatically depending on the ambient light, e.g., in tunnels, in twilight, or if there is precipitation. Adaptive Light Control is active.

A blue sky with the sun low on the horizon can cause the lights to be switched on.

The low beams remain switched on independent of the ambient lighting conditions when you switch on the front fog lights.

Personal responsibility

The automatic headlamp control cannot serve as a substitute for your personal judgment in determining when the lamps should be switched on in response to ambient lighting conditions.
For example, the sensors are unable to detect fog or hazy weather. To avoid safety risks, you should always switch on the lamps manually under these conditions. ◄

The exterior lighting goes out automatically after the vehicle is switched off.

**High-beams/roadside parking lights**

1. Turn signal/roadside parking light
2. Switching on the high-beams
3. Switching off the high-beams/headlight flasher

To assist in parking, the vehicle can be illuminated on one side; note the country-specific regulations. The roadside parking lights drain the battery. Therefore, do not leave them on for unduly long periods of time; otherwise, the battery might not have enough power to start the engine.

**Switching on the roadside parking light**

To switch on the roadside parking light on the left or right, press the turn indicator lever up or down after switching off the vehicle, arrow 1.

**Switching off the roadside parking light**

Press the lever up or down to the resistance point.

**Daytime running lights**

The daytime running lights light up in switch position 0, 1, or 3 when the ignition is switched on.

The exterior lighting goes out automatically after the vehicle is switched off.

In switch position 1, the parking lights light up after the ignition is switched off.

**Activating/deactivating**

In some countries, driving with daytime running lights is mandatory; for this reason, daytime running lights cannot be deactivated in these cases.

1. "Settings"
2. "Lighting"
3. "Daytime running lamps"

The setting is stored for the remote control currently in use.

**Welcome lights**

If the light switch stays in switch position 2 or 3 after the vehicle is switched off, the parking lights and the interior lights light up for a certain period when the vehicle is unlocked.

**Headlight courtesy delay feature**

The low beams stay lit for a short while after the ignition is switched off, if the lights are switched off and the headlight flasher is switched on.
Setting the duration
1. "Settings"
2. "Lighting"
3. "Pathway light: s"
4. Set the duration.
The setting is stored for the remote control currently in use.

ADAPTIVE LIGHT CONTROL

The concept
Adaptive Light Control is a variable headlight control system that enables dynamic illumination of the road surface.
Depending on the steering angle and other parameters, the light from the headlight follows the course of the road.

Activating
With the ignition switch on, turn the light switch to position 3, refer to page 77.
To avoid blinding oncoming traffic, the Adaptive Light Control does not swivel to the driver's side when the vehicle is at a standstill.
When driving in reverse, Adaptive Light Control is not active.

Malfunction
The warning light lights up. A message appears on the Control Display. Adaptive Light Control is malfunctioning or has failed. Have the system checked as soon as possible.

FOG LIGHTS

At a glance
To switch on the front fog lights: press the switch.
To switch off, press the respective switch upward or downward again.

Fog lights
The parking lights or low beams must be switched on. The green indicator lamp lights up when the front fog lights are switched on.
Depending on the vehicle equipment, the front fog lights are switched off when the headlight flasher or the high-beams are activated.
If the automatic headlight control is activated, refer to page 77, the low beams are switched on automatically when the front fog lights are switched on.

INSTRUMENT LIGHTING
The parking lights or low beams must be switched on to adjust the brightness. The brightness is increased to a certain limit and is then reduced again.
Press the button briefly: the brightness changes in stages.<br>Press and hold the button: the brightness changes continuously.

INTERIOR LIGHTS

The interior lights, the footwell lights and the cargo area light are controlled automatically.
To avoid draining the battery, all lights inside the vehicle are switched off some time after the ignition is switched off.

Switching interior lights on/off manually

To switch the interior lights on/off: press the switch.
If the interior lights are to remain switched off, press the switch for approx. 3 seconds.

Reading lights

Reading lights are located in the front next to the interior light and in the rear.

Switching the reading lights on/off

Front: press the switch.
Rear: press the button.

Ambient lighting

The color and brightness of the ambient lighting can be changed.

Press the switch forward: the color changes in steps.
Press the switch back: the brightness changes in steps.
Intermediate settings and intermediate colors are possible.
For continuously changing colors of the ambient lighting, press the switch forward for more than 10 seconds.
For Canadian vehicles:
Continuously changing colors of the ambient lighting is not available.
SAFETY

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AIRBAGS

The graphic shows the MINI Paceman as an example.

1 Front airbags
2 Knee airbag
3 Side airbag
4 Head airbags

Front airbags
Front airbags help protect the driver and front passenger by responding to frontal impacts in which safety belts alone cannot provide adequate restraint.

Side airbags
In a lateral impact, the side airbag supports the side of the body in the chest and lap area.

Head airbags
In a lateral impact, the head airbag supports the head.

Knee airbag
The knee airbag supports the legs in a frontal impact.
Protective action

Airbags are not triggered in every impact situation, e.g., in less severe accidents or rear-end collisions.

⚠️ Information on how to ensure the optimal protective effect of the airbags

▷ Keep at a distance from the airbags.
▷ Always grasp the steering wheel on the steering wheel rim, holding your hands at the 3 o’clock and 9 o’clock positions, to keep the danger of injury to your hands or arms as low as possible if the airbag is triggered.
▷ There should be no people, animals, or objects between an airbag and a person.
▷ Do not use the cover of the front airbag on the front passenger side as a storage area.
▷ Keep the dashboard and window on the front passenger side clear, i.e., do not cover with adhesive labels or coverings, and do not attach holders or cables such as for navigation instruments and mobile phones.
▷ Make sure that the front passenger is sitting correctly, i.e., keeps his or her feet and legs in the footwell; otherwise, leg injuries can occur if the front airbag is triggered.
▷ Do not place slip covers, seat cushions or other objects on the front passenger seat that are not approved specifically for seats with integrated side airbags.
▷ Do not hang pieces of clothing, such as jackets, over the backrests.
▷ Make sure that occupants keep their heads away from the side airbag and do not rest against the head airbag; otherwise, injuries can occur if the airbags are triggered.
▷ Do not remove the airbag restraint system.
▷ Do not remove the steering wheel.
▷ Do not apply adhesive materials to the airbag cover panels, cover them or modify them in any way.

▷ Never modify either the individual components or the wiring in the airbag system. This also applies to steering wheel covers, the dashboard, the seats, the roof pillars and the sides of the headliner.

Even when all instructions are followed closely, injury from contact with the airbags cannot be ruled out in certain situations.

The ignition and inflation noise may lead to short-term and, in most cases, temporary hearing impairment in sensitive individuals.

⚠️ In the case of a malfunction, deactivation and after triggering of the airbags

Do not touch the individual components immediately after the system has been triggered; otherwise, there is the danger of burns.

Only have the airbags checked, repaired or dismantled and the airbag generator scrapped by your service center or a workshop that has the necessary authorization for handling explosives.

Non-professional attempts to service the system could lead to failure in an emergency or undesired triggering of the airbag, either of which could result in injury.

Warning notices and information about the airbags can also be found on the sun visors.

Automatic deactivation of the front passenger airbags

The system determines whether the front passenger seat is occupied by measuring the electrical resistance of the human body.

The front, side, and knee airbags on the front passenger side are activated or deactivated accordingly by the system.

The indicator lamp above the interior rearview mirror, refer to page 83, shows the current status of the front passenger airbags, deactivated or activated.
Leave feet in the footwell
Make sure that the front passenger keeps his or her feet in the footwell; otherwise, the front passenger airbags may not function properly. ▶

Child restraint fixing system in the front passenger seat
Before transporting a child on the front passenger seat, read the safety and operating instructions under Transporting children safely, refer to page 52. ▶

Malfunction of the automatic deactivation system
When transporting older children and adults, the front passenger airbags may be deactivated in certain sitting positions. In this case, the indicator lamp for the front passenger airbags lights up.
In this case, change the sitting position so that the front passenger airbags are activated and the indicator lamp goes out.
If it is not possible to activate the airbags, have the person sit in the rear.
To make sure that occupation of the seat cushion can be detected correctly:
▶ Do not attach seat covers, seat cushion padding, ball mats, or other items to the front passenger seat unless they are specifically recommended by the manufacturer of your MINI.
▶ Do not place electronic devices on the passenger seat if a child restraint fixing system is mounted on the seat.
▶ Do not place objects under the seat that could press against the seat from below.

Indicator light for the front passenger airbags
The indicator lamp for the front passenger airbags indicates the operating state of the front passenger airbags.
The light indicates whether the airbags are activated or deactivated.
▶ The indicator lamp lights up when a child who is properly seated in a child restraint fixing system intended for that purpose is detected on the seat or the seat is empty. The airbags on the front passenger side are not activated.
▶ The indicator lamp does not light up when, for example, a correctly seated person of sufficient size is detected on the seat. The airbags on the front passenger side are activated.
Most child seats are detected by the system. Especially the child seats required by NHTSA at the time that the vehicle was manufactured. After installing a child seat, make sure that the indicator lamp for the front passenger airbags lights up. This indicates that the child seat has been detected and the front passenger airbags are not activated.
Operational readiness of airbag system

In the radio ready state and beyond, refer to page 57, the warning light lights up briefly to indicate that the entire airbag system and the belt tensioners are operational.

Airbag system malfunction

▷ Warning light does not light up in the radio ready state.
▷ Warning light remains permanently on.

Have the airbag system checked without delay if there is a malfunction

In the event of a malfunction in the airbag system, have it checked without delay; otherwise, there is the risk that the system will not function as intended even if a sufficiently severe accident occurs.

FTM FLAT TIRE MONITOR

The concept

The system does not measure the actual inflation pressure in the tires.

The system detects a pressure loss in a tire by comparing the rotational speeds of the individual wheels while moving.

In the event of a pressure loss, the diameter and therefore the rotational speed of the corresponding wheel change. This is detected and reported as a flat tire.

Functional requirements

The system must have been initialized when the tire inflation pressure was correct; otherwise, reliable signaling of a flat tire is not ensured.

Initialize the system after each correction of the tire inflation pressure and after every tire or wheel change.

System limits

⚠️ Sudden tire damage

Sudden serious tire damage caused by external influences cannot be indicated in advance.

A natural, even pressure loss in all four tires cannot be detected. Therefore, check the tire inflation pressure regularly.

The system could be delayed or malfunction in the following situations:

▷ When the system has not been initialized.
▷ When driving on a snowy or slippery road surface.
▷ Sporty driving style: slip in the drive wheels, high lateral acceleration.
▷ When driving with snow chains.

Status display

The current status of the Flat Tire Monitor can be displayed on the Control Display, e.g., whether or not the FTM is active.

1. "Vehicle Info"
2. "Vehicle status"
3. "Flat Tire Monitor"

The status is displayed.

 Initialization
 The initialization process adopts the set inflation tire pressures as reference values for the detection of a flat tire. Initialization is started by confirming the inflation pressures.
 Do not initialize the system when driving with snow chains.

1. "Vehicle Info"
2. "Vehicle status"
3. "Reset"
4. Start the engine, but do not start driving.
5. Start the initialization with "Reset".
6. Drive away.

The initialization is completed while driving, which can be interrupted at any time. The initialization automatically continues when driving resumes.

Indication of a flat tire

The warning lights come on in yellow and red. A message appears on the Control Display. In addition, a signal sounds.

There is a flat tire or a major loss in tire inflation pressure.

1. Reduce your speed and stop cautiously. Avoid sudden braking and steering maneuvers.
2. Check whether the vehicle is fitted with regular tires or run-flat tires.

Run-flat tires, refer to page 224, are labeled with a circular symbol containing the letters RSC marked on the tire sidewall.

Do not continue driving without run-flat tires

Do not continue driving if the vehicle is not equipped with run-flat tires; continued driving may result in serious accidents. ◄

When a flat tire is indicated, DSC Dynamic Stability Control is switched on if necessary.

Actions in the event of a flat tire

Normal tires

1. Identify the damaged tire.

Do this by checking the inflation pressure in all four tires.

The tire pressure gauge of the Mobility System, refer to page 225, can be used for this purpose.

If the tire inflation pressure in all four tires is correct, the Flat Tire Monitor may not have been initialized. In this case, initialize the system.

If an identification is not possible, please contact the service center.

2. Rectify the flat tire using the Mobility System, refer to page 225.
Run-flat tires
You can continue driving with a damaged tire at speeds up to 50 mph/80 km/h.

Continued driving with a flat tire
If continuing to drive with a damaged tire:
1. Avoid sudden braking and steering maneuvers.
2. Do not exceed a speed of 50 mph/80 km/h.
3. At the next opportunity, check the inflation pressure in all four tires.
   If the tire inflation pressure in all four tires is correct, the Flat Tire Monitor may not have been initialized. In this case, initialize the system.

Possible driving distance with complete loss of tire inflation pressure:
The possible driving distance after a loss of tire inflation pressure depends on the cargo load and the driving style and conditions.
For a vehicle containing an average load, the possible driving distance is approx. 50 miles/80 km.

When the vehicle is driven with a damaged tire, its handling characteristics change, e.g., reduced lane stability during braking, a longer braking distance, and altered self-steering properties. Adjust your driving style accordingly. Avoid abrupt steering maneuvers or driving over obstacles, e.g., curbs, potholes, etc.
Because the possible driving distance depends on how the vehicle is used during the trip, the actual distance may be smaller or greater depending on the driving speed, road conditions, external temperature, cargo load, etc.

A loss of tire inflation pressure results in a change in the handling characteristics, e.g., reduced lane stability during braking, a longer braking distance and altered self-steering properties.

Final tire failure
Vibrations or loud noises while driving can indicate the final failure of the tire. Reduce speed and stop; otherwise, pieces of the tire could come loose and cause an accident. Do not continue driving, and contact your service center.

TIRE PRESSURE MONITOR TPM
The concept
The system monitors the tire pressure in the four mounted tires. The system notifies you if there is a significant loss of pressure in one or more tires. Sensors in the tire valves measure the tire pressure.

Notes
Tire damage caused by external influences
Sudden tire damage caused by external influences cannot be indicated in advance.

To operate the system, also note the additional information and instructions contained under Tire inflation pressure, refer to page 216.

Functional requirements
The system must have been reset while the inflation pressure was correct; otherwise, it may not reliably signal a loss in pressure.
Perform a system reset after adjusting the tire inflation pressure to a new value and after changing a tire or wheel.
Always use wheels with TPM electronics to ensure that the system will operate properly.
**Status display**

The current status of the Tire Pressure Monitor (TPM) can be displayed on the Control Display, e.g., whether or not the TPM is active.

1. "Vehicle Info"
2. "Vehicle status"
3. "Tire Pressure Monitor - TPM"

The status is displayed.

**Status display**

The tire and system status is indicated on the Control Display by the color of the tires and a text.

**All wheels are green**

The system is active and issues warnings based on the tire inflation pressures stored during the last reset.

**One wheel is yellow**

A flat tire or major drop in inflation pressure in the indicated tire.

**All wheels are yellow**

A flat tire or major drop in inflation pressure in several tires.

**Wheels, gray**

The system cannot detect a flat tire. Reasons for this may be:

▷ The system is being reset.
▷ Malfunction.

**Performing a reset**

Perform a system reset after adjusting the tire inflation pressure to a new value and after changing a tire or wheel.

1. "Vehicle Info"
2. "Vehicle status"
3. "Reset"

4. Start the engine - do not drive away.
5. Start the initialization with "Reset".
6. Drive away.

The wheels are shown in gray and the status is displayed.

After a short trip at over 20 mph/30 km/h, the set tire inflation pressures are adopted as target values. The reset is completed automatically as you drive.

After a successful reset, the wheels appear in green on the Control Display and "Status: TPM active" is displayed.

The trip can be interrupted at any time. When driving resumes, the reset is continued automatically.

**Low tire pressure message**

The warning lights come on in yellow and red. A Check Control message is displayed. A message is displayed on the onboard monitor. In addition, a signal sounds.

▷ There is a flat tire or substantial loss of inflation pressure on the indicated wheel.
The system was not reset after a wheel change and thus issues warnings based on the inflation pressures initialized last.

1. Reduce your speed and stop cautiously. Avoid sudden braking and steering maneuvers.

2. Check whether the vehicle is fitted with regular tires or run-flat tires.
   Run-flat tires, refer to page 224, are labeled on the tire sidewall with a circular symbol containing the letters RSC.

Do not continue driving without run-flat tires

Do not continue driving if the vehicle is not equipped with run-flat tires; continued driving may result in serious accidents.

When a low inflation pressure is indicated, DSC Dynamic Stability Control is switched on if necessary.

Actions in the event of a flat tire

Normal tires

1. Identify the damaged tire.
   Do this by checking the air pressure in all four tires. The tire pressure gauge of the Mobility System, refer to page 225, can be used for this purpose.

   If the tire inflation pressure in all four tires is correct, the Tire Pressure Monitor may not have been reset. Reset the system.

   If an identification is not possible, please contact the service center.

2. Rectify the flat tire using the Mobility System, refer to page 225.
   Use of tire sealant, e.g., the Mobility System, may damage the TPM wheel electronics. In this case, have the electronics checked at the next opportunity and have them replaced if necessary.

Run-flat tires

You can continue driving with a damaged tire at speeds up to 50 mph/80 km/h.

Do not continue driving without run-flat tires

Do not continue driving if the vehicle is not equipped with run-flat tires; continued driving may result in serious accidents.

Continued driving with a flat tire

If continuing to drive with a damaged tire:

1. Avoid sudden braking and steering maneuvers.

2. Do not exceed a speed of 50 mph/80 km/h.

3. Check the air pressure in all four tires at the next opportunity.
   If the tire inflation pressure in all four tires is correct, the Tire Pressure Monitor may not have been reset. Reset the system.

Possible driving distance with complete loss of tire inflation pressure:

The possible driving distance after a loss of tire inflation pressure depends on the cargo load and the driving style and conditions.

For a vehicle containing an average load, the possible driving distance is approx. 50 miles/80 km.

When the vehicle is driven with a damaged tire, its handling characteristics change, e.g., reduced lane stability during braking, a longer braking distance, and altered self-steering properties. Adjust your driving style accordingly. Avoid abrupt steering maneuvers or driving over obstacles, e.g., curbs, potholes, etc.

Because the possible driving distance depends on how the vehicle is used during the trip, the actual distance may be smaller or greater depending on the driving speed, road conditions, external temperature, cargo load, etc.
Continued driving with a flat tire
Drive moderately and do not exceed a speed of 50 mph/80 km/h.
A loss of tire inflation pressure results in a change in the handling characteristics, e.g., reduced lane stability during braking, a longer braking distance and altered self-steering properties.

Final tire failure
Vibrations or loud noises while driving can indicate the final failure of the tire. Reduce speed and stop; otherwise, pieces of the tire could come loose and cause an accident. Do not continue driving, and contact your service center.

Message indicating that the inflation pressure needs to be checked
The yellow warning light lights up.
A Check Control message is displayed.
An additional message is displayed on the onboard monitor.

▷ The system has detected that a wheel was changed but a reset was not performed.
▷ The tire was not inflated according to specifications.
▷ The tire pressure has dropped since the last confirmation.

In this case:
▷ Check the tire inflation pressure and correct it if necessary.
▷ After changing a wheel, reset the system.

System limits
The system will not function properly if a reset was not performed, e.g., it may identify a tire as flat although the tire is filled to the correct inflation pressure.
The tire pressure depends on the temperature of the tire. An increase in the tire temperature, e.g., while driving or due to sunlight, increases the tire inflation pressure. The tire pressure decreases when the tire temperature drops. In case of severe temperature drops, this behavior may lead to a warning on account of the defined warning limits.

Malfunction
The yellow warning light flashes yellow and then lights up continuously.
A Check Control message is displayed.
An additional message is displayed on the onboard monitor.
A flat tire or tire inflation pressure loss cannot be detected.
Display in the following situations:
▷ A wheel without TPM electronics is mounted, e.g., a compact wheel:
   Have the system checked by the service center if necessary.
▷ Malfunction:
   Have the system checked by the service center.
▷ TPM was unable to complete the reset.
   Reset the system again.

The yellow warning light flashes and then lights up continuously.
A Check Control message is displayed.
An additional message is displayed on the onboard monitor.
A flat tire or tire inflation pressure loss cannot be detected.
Display in the following situation:
▷ Disturbance by other systems or devices with the same radio frequency:
   After leaving the area of the disturbance, the system automatically becomes active again.
Declaration according to NHTSA/FMVSS 138 Tire Pressure Monitoring Systems

Each tire, including the spare (if provided) should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label, you should determine the proper tire inflation pressure for those tires.).

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS) that illuminates a low tire pressure telltale when one or more of your tires is significantly under-inflated. Accordingly, when the low tire pressure telltale illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under-inflated tire causes the tire to overheat and can lead to tire failure. Under-inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle's handling and stopping ability.

Please note that the TPMS is not a substitute for proper tire maintenance, and it is the driver's responsibility to maintain correct tire pressure, even if under-inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale.

Your vehicle has also been equipped with a TPMS malfunction indicator to indicate when the system is not operating properly. The TPMS malfunction indicator is combined with the low tire pressure telltale. When the system detects a malfunction, the telltale will flash for approximately one minute and then remain continuously illuminated. This sequence will continue upon subsequent vehicle startups as long as the malfunction exists. When the malfunction indicator is illuminated, the system may not be able to detect or signal low tire pressure as intended. TPMS malfunctions may occur for a variety of reasons, including the installation of replacement or alternate tires and wheels allow the TPMS to continue to function properly.

SPEED LIMIT

The concept

Enter a speed for which a Check Control message will be displayed when the speed is reached. This enables you to receive warnings if you exceed a speed limit in an urban area, for example.

You are only warned of reaching this speed a second time if your vehicle speed falls below it again by at least 3 mph/5 km/h.

Displaying, setting or changing the limit

1. "Settings"
2. "Speed"
3. "Warning at:"
4. Turn the MINI joystick to accept the setting.
5. Press the MINI joystick to apply the setting. The limit is stored.

Applying your current speed as the limit

1. "Settings"
2. "Speed"
3. "Select current speed"

4. Press the MINI joystick.

The system adopts your current speed as the limit.

**Activating/deactivating the limit**

1. "Settings"
2. "Speed"
3. "Warning"

4. Press the MINI joystick.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

ANTILOCK BRAKE SYSTEM

ABS
ABS prevents locking of the wheels during braking.
Steerability is maintained even during full braking. This increases active driving safety.
ABS is operational every time you start the engine.

Electronic brake-force distribution EBV
The system controls the brake pressure in the rear wheels to ensure stable braking behavior.

CBC Cornering Brake Control
When braking in curves or during a lane change, driving stability and steering response are improved further.

BRAKE ASSISTANT
When the brakes are applied rapidly, this system automatically produces the maximum braking force boost. In this way, the system helps keep the braking distance as short as possible. This system utilizes all of the benefits provided by ABS.
Do not reduce the pressure on the brake pedal for the duration of full braking.

DYNAMIC STABILITY CONTROL DSC

The concept
DSC prevents traction loss in the driving wheels when driving away and accelerating.
DSC also recognizes unstable vehicle conditions, such as fishtailing or nose-diving. Subject to physical limits, DSC helps to keep the vehicle on a steady course by reducing engine speed and by applying brakes to the individual wheels.
DSC is operational every time you start the engine.

⚠️ Adjust your driving style to the situation
An appropriate driving style is always the responsibility of the driver.
The laws of physics cannot be repealed, even with DSC.
Do not reduce the additional safety margin with a risky driving style, as otherwise there is a risk of an accident.

\[\text{Seite 92}\]
Deactivating DSC

Press the switch until the DSC OFF indicator lamp lights up in the speedometer and DSC OFF appears in the tachometer. DSC is deactivated. Intervening measures to stabilize the vehicle and give it forward momentum are no longer executed.

When driving with snow chains or to rock the vehicle free of snow, it may be useful to deactivate DSC temporarily.

To increase vehicle stability, activate DSC again as soon as possible.

Activating DSC

Press the switch again; the DSC indicator lamps in the display elements go out.

Indicator/warning lights

The indicator lamp in the tachometer flashes: DSC is controlling the drive forces and brake forces.

The indicator lamp lights up: DSC and DTC has failed.

The indicator lamp in the speedometer lights up and DSC OFF appears in the tachometer.

DSC and DTC deactivated.

DYNAMIC TRACTION CONTROL DTC

The concept

The DTC system is a version of the DSC in which forward momentum is optimized.

The system ensures maximum forward momentum on special road conditions, e.g., unplowed snowy roads, but driving stability is limited.

It is therefore necessary to drive with appropriate caution.

You may find it useful to briefly activate DTC under the following special circumstances:

▷ When driving in sand, on snowy inclines, in slush, or on unplowed, snow-covered road surfaces

▷ When rocking a vehicle free or starting off in deep snow, sand, or on loose ground

▷ When driving with snow chains.
Activating DTC
Press the switch; the DSC OFF indicator lamp lights up in the speedometer and TRACTION appears in the tachometer. Dynamic Stability Control DSC is deactivated, Dynamic Traction Control DTC is activated.

Deactivating DTC
Press the switch again; the DSC OFF indicator lamp in the speedometer and TRACTION in the tachometer go out.
In the interest of better forward momentum, brake intervention is performed in the manner of a differential lock when the drive wheels spin unevenly even when DSC/DTC is deactivated.

Indicator/warning lamps
The indicator lamp in the tachometer flashes: DTC is controlling the drive forces and brake forces.
The indicator lamp lights up: DSC and DTC has failed.
The indicator lamp in the speedometer lights up and TRACTION appears in the tachometer.

HILL DRIVE-OFF ASSISTANT
This system supports driving away on gradients. The parking brake is not required.

1. Hold the vehicle in place with the foot brake.
2. Release the foot brake and drive away without delay.

Driving off without delay
After releasing the foot brake, start driving without delay, since the drive-off assistant will not hold the vehicle in place for more than approx. 2 seconds and the vehicle will begin rolling back.

ALL4 ALL-WHEEL SYSTEM
ALL4 is the all-wheel system of your MINI. The combined effects of ALL4 and DSC further optimize the traction and dynamic driving characteristics. The ALL4 all-wheel system variably distributes the drive forces to the front and rear axles depending on the driving situation and prevailing road conditions.

SPORT BUTTON
When this button is pressed, the vehicle responds in an even sportier manner.
The engine responds more spontaneously to accelerator movements.
The steering responds more directly.
Cooper S, John Cooper Works: the engine sounds sportier when coasting.
For Steptronic transmissions: more rapid gear changes in the Sport program.

Activating the system

Press the switch; the LED in the button lights up and SPORT is displayed briefly in the tachometer.

Deactivating the system

Press the switch again.
Switch the engine off.
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

**CRUISE CONTROL**

**The concept**

The system is functional at speeds beginning at approx. 20 mph/30 km/h. The vehicle stores and maintains the speed specified using the controls on the steering wheel.

**Do not use cruise control**

Do not use the system if unfavorable conditions make it impossible to drive at a constant speed, for instance:

- On curvy roads.
- In heavy traffic.
- On slippery roads, in fog, snow or rain, or on a loose road surface.

Otherwise, you could lose control of the vehicle and cause an accident.

### Controls

**At a glance**

1. Maintaining, storing, and increasing the speed
2. Activating/deactivating cruise control
3. Maintaining, storing, and reducing the speed
4. Resuming cruise control

**Switching on**

Press button 2.

The indicator lamp lights up in the speedometer. Cruise control is ready to operate and can be activated.

**Switching off**

Press button 2.

- When activated: press twice.
- When interrupted: press once.

The displays go out. The stored target speed is cleared.

**Interrupting**

Press button 2.

The system is interrupted automatically if

- The brakes are applied.
- The clutch pedal is depressed.
The transmission position D is disengaged.

DSC intervenes.

Maintaining, storing the current speed
Press button 1 or button 3.
The current speed is maintained and stored. It is displayed briefly in the tachometer.

On downhill gradients, it may prove impossible to maintain the set speed if the engine braking power is insufficient. On uphill gradients, it may prove impossible to maintain the set speed if the engine power output is insufficient.

Increasing speed
Press button 1 repeatedly until the desired speed is reached.
Each time the button is pressed, the speed increases by approx. 1 mph/1 km/h.
Press and hold button 1 until the desired speed is reached.
The vehicle accelerates without pressure on the accelerator pedal. After the button is released, the achieved speed is maintained and stored.

Decreasing speed
Press button 3 repeatedly or hold it until the desired speed is reached.
The functions are the same those when the speed is increased, only that the speed is reduced.

Resuming a speed stored beforehand
Press button 4.
The last stored speed is resumed and maintained.
The stored speed is cleared when the ignition is switched off.

Display in the tachometer
The selected speed is displayed briefly.
If the display --- mph or --- km/h appears briefly, conditions may not be adequate to operate the system.

For better control
The indicator lamp lights up in the speedometer. Cruise control is ready to operate and can be activated.

Malfunction
The warning lamp in the tachometer lights up.
A message appears on the Control Display.
The system is malfunctioning or has failed.

PARK DISTANCE CONTROL
PDC
The concept
PDC provides support when parking in reverse. Signal tones and a visual display indicate that the vehicle is approaching an object behind it. Measurements are made by four ultrasound sensors in the bumpers.
The range of these sensors is approx. 6 ft/2 m.
An acoustic warning is first given:
By the two corner sensors at approx. 24 in/60 cm.
By the rear middle sensors at approx. 5 ft/1.50 m.

Avoid driving quickly with PDC
PDC is a parking aid that can display objects when the vehicle approaches them slowly, as is the case during parking maneuvers. Avoid driving toward an object quickly as the system may then be too late in issuing a warning for technical reasons.

Automatic operation
The system is activated after approx. one second when reverse gear or selector lever position R is engaged while the engine is running or the ignition is switched on. Await this short period before setting the vehicle into motion.

Signal tones
The closer the vehicle is to the object, the shorter the intervals become. If the distance to a detected object is less than approx. 12 in/30 cm, a continuous tone is sounded. If the distance remains constant, for example when driving parallel to a wall, the signal tone is stopped after approx. 3 seconds.

PDC with visual warning
Displaying the approach to an object on the Control Display. The contours of distant objects are displayed on the Control Display before a signal tone is output. The display is shown on the Control Display as soon as reverse gear or selector lever position R is engaged.

System limits
Check the traffic situation as well
PDC cannot serve as a substitute for the driver's personal judgment of the traffic situation. Check the traffic situation around the vehicle with your own eyes. Otherwise, an accident could result from road users or objects located outside of the PDC detection range. Loud noises from outside and inside the vehicle may prevent you from hearing the PDC's signal tone.

Malfunction
The warning light lights up. A message appears on the Control Display. PDC is malfunctioning or has failed. Have the system checked.

To ensure full functionality of the sensors, keep the sensors clean and free of ice. When using high-pressure washers, do not spray the sensors for long periods and maintain a distance of at least 12 in/30 cm.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AIR CONDITIONER

1 Air volume
2 Cooling function
3 Recirculated air mode
4 Temperature
5 Rear window defroster
6 Vent settings
7 Windshield heating

Notes

⚠️ Sufficient ventilation

When remaining in the vehicle for an extended period of time, ensure sufficient external ventilation. Do not continuously use recirculated-air mode; otherwise the air quality in the interior continuously worsens.
Air volume

Vary the air volume. The higher the rate, the more effective the heating or cooling will be. The air flow rate may be reduced or the blower may be switched off entirely to save on battery power.

Switching the system on/off

Turn the rotary switch for the air volume to 0. The blower and air conditioner are completely switched off and the air supply is cut off. Set any air volume to switch on the air conditioning.

Cooling function

The passenger compartment can only be cooled with the engine running.

The cooling function cools and dehumidiﬁes the incoming air before reheating it as required, according to the temperature setting. The cooling function helps to prevent condensation on the windows or to remove it quickly. Depending on the weather, the windshield may fog up brieﬂy when the engine is started. To cool the air faster and more intensively when external temperatures are high, switch on the recirculated air mode.

Recirculated air mode

If the air outside the car has an unpleasant odor or contains pollutants, shut off the supply to the interior of the car temporarily. The system then recirculates the air currently within the vehicle.

Should the windows fog up in the recirculated-air mode, press the AUTO button or switch off the recirculated-air mode and increase the air volume if necessary. Make sure that air can flow onto the windshield. Recirculated air mode is automatically deacti‐vated at low external temperatures.

Temperature

Turn upward, red, to raise the temperature. Turn downward, blue, to lower the temperature.

Rear window defroster

The rear window defroster switches off automatically after a certain period of time. The rear window defroster power may be lowered or even switched off entirely to save on battery power.

Vent settings

Direct the ﬂow of air to the windows , to the upper body area , or to the footwell . Intermediate positions are possible.

Windshield heating

The windshield heating switches off automatically after some time. The windshield heating may be reduced or even switched off entirely to save on battery power.

Defrosting and defogging windows

1. Set the maximum air volume.
2. Air distribution in position . By switching on the cooling function, the windows are defogged more rapidly.
3. Set the highest temperature, red.
4. Deactivate recirculated air mode.
5. Switch on the windshield heating if necessary.
6. Switch on the rear window defroster if necessary.

Microfilter
The microfilter traps dust and pollen. The microfilter is changed by the service center during routine maintenance work.

AUTOMATIC CLIMATE CONTROL

1 Air volume, manual
2 AUTO program
3 Recirculated air mode
4 Maximum cooling
5 Manual air distribution
6 Temperature
7 Defrosting windows and removing condensation
8 Cooling function
9 Rear window defroster
10 Windshield heating

Microfilter/activated-charcoal filter
The microfilter traps dust and pollen. The activated-charcoal filter provides additional protection by filtering gaseous pollutants from the outside air. The service center replaces this combined filter during routine maintenance.
Notes

Sufficient ventilation
When remaining in the vehicle for an extended period of time, ensure sufficient external ventilation. Do not continuously use recirculated-air mode; otherwise the air quality in the interior continuously worsens.

Comfortable interior climate
The AUTO program offers the optimum air distribution and air volume for virtually all conditions, refer to AUTO program below. Select a comfortable interior temperature only.
The following sections contain more detailed information on the available setting options.
Most of these settings are stored for the remote control in use, Personal Profile settings, refer to page 31.

Air volume, manual
Press the – button to reduce the air volume. Press the + button to increase the air volume.
The automatic mode for the air volume can be switched on again using the AUTO button.
The air flow rate may be reduced or the blower may be switched off entirely to save on battery power. The display remains the same.

Switching the system on/off
Reduce the air volume by pressing the – button until the system is switched off. All displays go out.
Press the AUTO button to switch the automatic climate control back on.

AUTO program
The AUTO program automatically adjusts the air distribution to the windshield and side windows, toward the upper body area, and into the footwell. The air volume and your specifications for the temperature are adjusted to outside influences due to the seasons, e.g., solar radiation.
The cooling function is switched on automatically with the AUTO program.
The program is switched off if the air distribution is manually adjusted or the button is pressed again.

Recirculated air mode
If the air outside the car has an unpleasant odor or contains pollutants, shut off the supply to the interior of the car temporarily. The system then recirculates the air currently within the vehicle.
Should the windows fog up in the recirculated-air mode, press the AUTO button or switch off the recirculated-air mode and increase the air volume if necessary. Make sure that air can flow onto the windshield.
Recirculated air mode is automatically deactivated at low external temperatures.

Maximum cooling
Automatic climate control switches to the lowest temperature, a high air volume, and recirculated air mode.
For maximum cooling, open the vents for the upper body area.
The air is cooled as quickly as possible:
▷ At an external temperature above 32 °F/0 °C.
▷ When the engine is running.
Manual air distribution

The flow of air is directed, as selected, to the windows, to the upper body area, or to the footwell.

The automatic mode for the air distribution can be switched back on using the AUTO button.

Temperature

Set the desired temperature individually.

The automatic climate control achieves this temperature as quickly as possible regardless of the season, using maximum cooling or heating power if necessary, and then maintains it.

When switching between different temperature settings in rapid succession, the automatic climate control does not have sufficient time to adjust the set temperature.

Rear window defroster

The rear window defroster switches off automatically after a certain period of time.

Depending on the vehicle equipment, upper wires are used as an antenna and are not part of the rear window defroster.

Defrosting and defogging windows

Quickly removes ice and condensation from the windshield and front side windows. For this purpose, also switch on the cooling function.

The windshield heating switches on automatically.

Windshield heating

The windshield heating switches off automatically after some time.

Cooling function

The cooling function cools and dehumidifies the incoming air before reheating it as required, according to the temperature setting. The passenger compartment can only be cooled with the engine running.

The cooling function helps to prevent condensation on the windows or to remove it quickly.

Depending on the weather, the windshield may fog up briefly when the engine is started. Recirculated air mode is switched on automatically if necessary.

The cooling function is switched on automatically when the AUTO button is pressed.

Microfilter/activated-charcoal filter

The microfilter traps dust and pollen. The activated-charcoal filter provides additional protection by filtering gaseous pollutants from the outside air. The service center replaces this combined filter during routine maintenance.
VENTILATION

1 Knob for continuous opening and closing
2 Nozzle for direction of air flow

Opening/closing
Turn the knob.

Direction of air flow
Pivot the entire nozzle.
INTERIOR EQUIPMENT

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

UNIVERSAL GARAGE DOOR OPENER

The concept

The universal garage door opener can be used to operate up to 3 functions in remote-controlled systems, such as garage door drives or lighting systems. The universal garage door opener replaces up to 3 different hand-held transmitters. To operate it, the buttons on the interior rearview mirror must be programmed for the desired functions. The hand-held transmitter for the system is needed for the programming procedure.

During programming

During programming and before activating a device using the Universal Garage Door Opener, ensure that there are no people, animals, or objects in the range of movement of the remote-controlled device; otherwise, there is a risk of injury or damage.

Also follow the safety instructions of the hand-held transmitter.

Before selling the vehicle, delete the stored functions for security reasons.

Compatibility

If this symbol is printed on the packaging or in the operating instructions of the system being operated, the system is generally compatible with the universal garage door opener.

If you have any questions, please contact:
▷ Your service center.
▷ www.homelink.com on the Internet.

HomeLink is a registered trademark of the Gentex Corporation.

Controls on the interior rearview mirror

1. LED
2. Buttons
3. Hand-held transmitter, required for programming.

Programming

General information

1. Switch on the ignition.
2. Initial setup:

Press the right and left buttons on the interior rearview mirror simultaneously for approx. 20 seconds until the LED on the interior rearview mirror begins to flash. All programmed settings of the buttons on the interior rearview mirror are deleted.
3. Hold the hand-held transmitter of the system to be operated a distance of approx. 1 to 3 in/2.5 to 8 cm away from the buttons on the interior rearview mirror. The required distance depends on the particular hand-held transmitter.

4. Press the button of the desired function on the hand-held transmitter and the button being programmed on the interior rearview mirror simultaneously and hold. The LED on the interior rearview mirror flashes slowly at first.

5. When the LED flashes more rapidly, release both buttons. Rapid flashing indicates that the button on the interior rearview mirror has been programmed.

If the LED does not flash faster after 60 seconds, change the distance between the interior rearview mirror and the hand-held transmitter and repeat the step. Multiple trials at different distances may be necessary. Wait at least 15 seconds between trials.

6. To program additional functions on other buttons, repeat steps 3 to 5.

The systems can be operated with the buttons on the interior rearview mirror.

**Special characteristics of alternating-code radio systems**

If the system cannot be operated after repeated programming, check whether the system to be operated uses an alternating-code system.

Read the operating instructions of the system or press and hold the programmed button on the interior rearview mirror. If the LED on the interior rearview mirror flashes rapidly at first and then lights up continuously for 2 seconds, the system is equipped with an alternating-code system. This flashing LED pattern repeats itself for approx. 20 seconds.

In systems with an alternating-code system, the universal garage door opener and the system must be additionally synchronized.

Please obtain additional information on synchronization in the operating instructions of the system being set up.

The systems will be easier to synchronize with the aid of a second person.

**Synchronization:**

1. Park the vehicle within range of the remote-controlled system.

2. Program the corresponding button on the interior rearview mirror as described.

3. Identify and press the synchronization button on the system being set up. You have approx. 30 seconds for the next step.

4. Press and hold the button on the interior rearview mirror for approx. 3 seconds and then release it. Repeat this step up to three times if necessary to complete the synchronization procedure. When synchronization is completed, the programmed function is executed.

**Reprogramming individual buttons**

1. Switch on the ignition.

2. Hold the hand-held transmitter at a distance of approx. 1 to 3 in/2.5 to 8 cm from the memory buttons.

   The required distance depends on the particular hand-held transmitter.

3. Press the memory button of the universal garage door opener.

4. If the LED flashes slowly after approx. 20 seconds, press the transmit button on the hand-held transmitter.

5. Release both buttons when the LED flashes rapidly.

   If the LED does not flash rapidly after approx. 60 seconds, change the distance and repeat the step.
Canada: if the LED does not flash rapidly after approx. 60 seconds, change the distance and repeat the step. If programming was aborted by the hand-held transmitter, hold down the memory button and press and release the button on the hand-held transmitter several times for 2 seconds.

Controls

Prior to operation

Before operating a unit with the Universal Garage Door Opener, ensure that there are no people, animals, or objects in the range of movement of the system; otherwise, there is a risk of injury or damage. Also follow the safety instructions of the hand-held transmitter.

The system, such as the garage door, can be operated using the button on the interior rearview mirror with the engine running or the ignition switched on. When you are within the reception range of the system, press and hold the button until the function is initiated. The LED on the interior rearview mirror lights up continuously while the radio signal is being transmitted.

Deleting stored functions

Press the right and left buttons on the interior rearview mirror simultaneously for approx. 20 seconds until the LED flashes rapidly. All stored functions are deleted. The functions cannot be deleted individually.

SUN VISOR

Glare protection

Folding down
Fold the sun visor down.

Folding up
Fold the sun visor up.

Glare protection from the side

Folding down
1. Fold the sun visor down.
2. Detach from the holder and pivot sideways to the side window.

Folding up
To close the sun visor, proceed in reverse order.

Vanity mirror

A vanity mirror is located behind a cover on each sun visor. To open, fold the cover up. Depending on the vehicle equipment, mirror lighting comes on when the cover is opened.

DIGITAL COMPASS

1. Adjustment button on the back of the mirror
2. Display

The display shows the main or secondary compass direction in which the vehicle is traveling.

Operating concept

Various functions can be called up by pressing the adjustment button with a pointed object such as a pen. The following adjustment options are displayed one after the other, de-
pending on how long the adjustment button is pressed:
▷ Press briefly: switch the display on/off.
▷ 3 to 6 seconds: set the compass zone.
▷ 6 to 9 seconds: calibrate the compass.
▷ 9 to 12 seconds: set left-hand/right hand steering.
▷ 12 to 15 seconds: set the language.

**Setting compass zones**
Set the compass zone corresponding to the vehicle’s geographic location so that the compass can function correctly; refer to the world map with compass zones.

Press the adjustment button for 3-4 seconds. The number of the compass zone set is shown in the display.

To change the zone setting, briefly press the adjustment button repeatedly until the display shows the number of the compass zone corresponding to the current location.

The compass is operational again after approx. 10 seconds.

**Calibrating the digital compass**
The digital compass must be calibrated in the following situations:
▷ An incorrect compass direction is shown.
▷ The cardinal direction displayed does not change even if the direction of travel changes.
▷ Not all compass directions are shown.

**Procedure**
1. Make sure that there are no large metal objects or overhead power lines in the vicinity of the vehicle and that there is enough space to drive in a circle.
2. Set the currently valid compass zone.
3. Press the adjustment button for 6-7 seconds to call up C. Then drive at least one full circle at a maximum speed of 4 mph/7 km/h. When the system is calibrated, the C is replaced by the compass directions.
Right-hand/left-hand steering
The digital compass is set for right-hand or left-hand steering at the factory.

Setting the language
Press the adjustment button for 12-13 seconds. Briefly press the adjustment button again to switch between English "E" and German "O". The setting is automatically saved after approx. 10 seconds.

CUPHOLDERS AND ASHTRAY/ LIGHTER

Cupholders
Two cupholders are located in the center console in the front.

MINI Countryman: two additional cupholders are located at the end of the center console in the rear. Additional cupholders can be installed on the center rail.

MINI Paceman: additional cupholders are located in the console between the rear seats.

Depending on the equipment, additional cupholders can be installed on the center rail.

⚠️ Shatter-proof containers and no hot drinks
Use light and shatter-proof containers and do not transport hot drinks. Otherwise, there is the increased danger of injury in an accident.

⚠️ Unsuitable containers
Do not forcefully push unsuitable containers into the cupholders. This may result in damage.

Ashtray
The ashtray is located in one of the cupholders in the center console at the front.

Emptying
Take out the entire ashtray, arrow. When installing, ensure that the ashtray is inserted in the cupholder with the adapter.

Lighter

With the engine running or the ignition switched on, press in the cigarette lighter.
The lighter can be removed as soon as it pops back out.

⚠️ Danger of burns
   Only hold the hot lighter by its head; otherwise, there is the danger of getting burned.

Switch off the ignition and take the remote control with you when leaving the vehicle so that children cannot use the lighter and burn themselves. 

**CONNECTING ELECTRICAL DEVICES**

The lighter socket can be used as a socket for electrical equipment while the engine is running or when the ignition is switched on. The total load of all sockets must not exceed 140 watts at 12 volt.

Avoid damaging the sockets by attempting to insert plugs of unsuitable shape or size.

⚠️ Do not connect the charger to the socket
   Do not connect the battery charger to the socket installed in the vehicle at the factory as this could damage the battery.

⚠️ Replace the cover after use
   Replace the lighter or socket cover after use; otherwise, objects that fall into the lighter socket or power socket could cause a short circuit.

**Socket in the center console**

Remove the cover or lighter, refer to page 109, from the socket.

**Socket in the rear**

MINI Countryman

Take out the cover.

MINI Paceman

Take out the cover.

**Socket in the cargo area**

MINI Countryman

Take out the cover.
MINI Paceman

Take out the cover.

**CARGO AREA**

**Cargo cover**

⚠️ Do not place objects on the covers
Do not place objects on the cover; if you do so, they may pose a danger to vehicle occupants during braking or evasive maneuvers or damage the cover. ◀

⚠️ Move the cover into position
When closing, ensure that the cargo cover is resting on the rubber buffers of the securing straps; otherwise, damage may occur when closing the tailgate. ◀

When the tailgate is opened, the cargo cover is raised.

To load bulky luggage, the cover can be removed.

1. Detach the securing straps from the tailgate.
2. Lift the cover slightly, arrow 1, and pull it back and out of the bracket, arrow 2.

MINI Countryman: rear seat backrests

⚠️ Danger of pinching
Before folding down the rear seat backrests, ensure that path of movement of the backrests is clear. Especially when the middle section is folded down, ensure that no one is located in or reaches into the path of movement of the rear seat backrests. Otherwise, injuries or damage may result. ◀

⚠️ Observe the instructions concerning the safety belt
Observe the instructions concerning the safety belt, refer to page 46. Otherwise, personal protection may be compromised. ◀

The rear seat backrest is divided at a ratio of 40-20-40.

When the outer rear seat backrests are folded down, it is not permissible for a person to travel on the center seat.

Remove the third head restraint, refer to page 49, if necessary.
Open the center safety belt and insert it in the belt holder on the headliner, refer to page 47.

Enlarge the cargo area by adjusting the rear seat backrests to a more upright position.

The backrests can be adjusted to 10 different positions between the comfort and transport positions and they can be folded down.

In the comfort position, the backrests are tilted back to the greatest possible angle and in the transport position they are nearly vertical.

Before beginning with the mounting of a child restraint fixing system, note the instructions, refer to page 52.

1. Hold the top of the backrest, for example the head restraint, and pull on the loop, arrow.

2. Engage the backrest in the desired position or fold it down.

**Folding the backrests back up**

- **Locking the backrest**

  When folding back, ensure that the locks engage properly; otherwise, cargo could be catapulted forward into the passenger compartment during braking maneuvers and swerving, endangering the occupants.

- **No child restraint fixing systems**

  Do not mount child restraint fixing systems in the rear when the rear seat backrests are adjusted to a more vertical position; otherwise, the protection provided by these systems may be reduced.

When the backrests are folded back up, they engage in the transport position.

To set the desired backrest inclination or comfort position, hold the backrest, pull the loop forward, and adjust the backrest.

**MINI Paceman: rear seat backrests**

- **Danger of pinching**

  Before folding down the rear seat backrests, ensure that path of movement of the backrests is clear; otherwise, injuries or damage may result.

  1. Fold the belt buckles down.

  2. Pull on the respective loop, arrow.

  The backrest is unlocked.

  3. Fold the backrest forward.

**Folding the backrests back up**

Hold the top of the backrest, for example the head restraint, and fold it back.

- **Locking the backrest**

  When folding back, ensure that the locks engage properly; otherwise, cargo could be catapulted forward into the passenger com-
partment during braking maneuvers and swerving, endangering the occupants. ◄

**Flat loading floor**

⚠️ Maximum load

Do not exceed the maximum load of 330 lbs, 150 kg, on the loading floor; otherwise, damage may result. ◄

**Access to storage area**

A storage area for items like the partition net is found under the loading floor.

1. Reach into the recess, arrow 1, on the rear edge of the loading floor.
2. Lift the loading floor at the rear, arrow 1, and fold it forward, arrow 2.

MINI Countryman:

![Diagram of loading floor access](image)

MINI Paceman:

![Diagram of loading floor access](image)

**Removing**

The loading floor can be removed if necessary.

1. Fold up the loading floor.
2. Pull it back slightly and out of the holders.
3. Then remove it upward.

The folded loading floor can be stored in the cargo area.

**MINI Countryman: partition net**

⚠️ Firmly attach the partition net

Make sure that the partition net is firmly attached; otherwise, injuries may result. ◄

**Before installing**

1. Remove the pouch with the partition net from the storage compartment under the loading floor in the cargo area.
2. Take the partition net out of the pouch, unroll it, and unfold it.
3. Unfold the partition net to the point where the rod elements engage.

**Installation behind the front seats**

1. Take out the cargo cover if necessary.
2. Fold down the rear seat backrests, refer to Enlarging the cargo area.

Before closing the tailgate, lower the loading floor back onto the cargo area floor.
3. Insert the retaining pins of the partition net all the way into the front holders in the headliner, arrow 1, and push forward.

4. Attach the hooks, arrow 2, at the bottom of the retaining straps on both sides to the eyelets on the vehicle floor.

5. Lash the partition net tightly. To do this, tighten the retaining straps using the tensioning buckles.

Removing

To remove and stow the partition net, proceed in reverse order.

To fold up, press the release button, arrow.

MINI Countryman: multi-function hook

Hooks designed for hanging shopping bags and totes, for example, are located on the left and right sides of the cargo cover support, arrow.

⚠️ Do not hang heavy items from the hooks
Only hang light bags or suitable objects from the holders. Otherwise, there is a danger of objects flying about during braking and evasive maneuvers.

Only transport heavy luggage in the trunk if it has been appropriately secured.PageIndex10
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

NOTES

⚠️ No loose objects in the passenger compartment

Do not stow any objects in the passenger compartment without securing them; otherwise, they may present a danger to occupants for instance during braking and avoidance maneuvers.⚠️

⚠️ No non-slip mats on the dashboard

Do not use non-slip materials, such as non-slip mats, on the dashboard, or it could be damaged by the substances in the materials.⚠️

GLOVE COMPARTMENT

Opening

Pull the handle to open the lid.

The light in the glove compartment switches on.

Closing

Fold up the cover.

⚠️ Close the glove compartment again immediately

Close the glove compartment immediately after use while driving; otherwise, injury may occur during accidents.⚠️

STORAGE COMPARTMENTS

Interior

▷ Glove compartment, refer to page 115.
▷ Center armrest, refer to page 116.
▷ Center rail, refer to page 116.
▷ Compartments in the center console.
▷ Compartments in the doors.
▷ Pockets on the back of the front seat backrests.

Cargo area

▷ Lashing eyes, refer to page 126.
▷ Storage compartment under the flat loading floor, refer to page 113.
▷ Multi-function hook on the cargo cover support, refer to page 114.
USB interface for data transfer
Updating the navigation data, refer to page 132, from the USB medium via the USB interface in the glove compartment.

Observe the following when connecting:
▷ Do not use force when plugging the connector into the USB interface.
▷ Do not connect devices such as fans or lamps to the USB interface.
▷ Do not connect USB hard drives.
▷ Do not use the USB interface to recharge external devices.

CENTER ARMREST
The center armrest between the front seats contains a storage compartment or a cover for the snap-in adapter, refer to page 198, depending on the equipment.

Do not position tall accessory parts directly on the center rail of the center armrest; otherwise, they may be damaged when the center armrest is opened or closed.

Center armrest front
Opening
Press the button, arrow, and pull up the lid.

Adjusting the position and fixing
1. Push lever 3 into position 1.
2. Adjust the position of the base plate.
3. Push lever 3 downward into position 0.
   Do not apply excessive pressure to the lever.

The base plate is fixed.

Fix the base plate
Fix the base plate before driving away; otherwise, injuries may result during an accident.

CENTER RAIL
Various accessory parts can be mounted on the center rail and moved to different positions.
CLOTHES HOOKS

Clothes hooks are located on the grab handles in the rear.

⚠️ Do not obstruct view
When suspending clothing from the hooks, ensure that it will not obstruct the driver’s vision.

⚠️ No heavy objects
Do not hang heavy objects from the hooks; otherwise, they may present a danger to passengers during braking and evasive maneuvers.

CONNECTION FOR AN EXTERNAL AUDIO DEVICE

This can be used to connect an external audio device, refer to page 167, such as a CD or MP3 player.
THINGS TO REMEMBER WHEN DRIVING

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

BREAKING-IN PERIOD

General information

Moving parts need to be broken in to adjust to each other.

The following instructions will help achieve a long vehicle life and good economy.

Engine and differential

Always obey all official speed limits.

Up to 1,200 miles/2,000 km

Drive at various engine and vehicle speeds, but do not exceed:

▷ For a gasoline engine, 4,500 rpm and 100 mph/160 km/h.

Avoid full-throttle operation and use of the transmission's kickdown mode for the initial miles.

From 1,200 miles/2,000 km

The engine and vehicle speed can gradually be increased.

Tires

Due to technical factors associated with their manufacture, tires do not achieve their full traction potential until after an initial breaking-in period.

Drive conservatively for the first 200 miles/300 km.

Brake system

Brakes require an initial break-in period of approx. 300 miles/500 km to achieve optimized contact and wear patterns between brake pads and discs. Drive cautiously during this break-in period.

Clutch

The clutch requires an initial break-in period of approx. 300 miles/500 km to function at an optimal level.

During this break-in period, engage the clutch gently.

Following part replacement

The same breaking in procedures should be observed if any of the components mentioned above have to be renewed in the course of the vehicle’s operating life.

GENERAL DRIVING NOTES

Ground clearance

Ensure adequate ground clearance

Ensure adequate ground clearance, e.g., when driving into underground garages, when driving over curbs, or when driving in winter; otherwise, damage may occur to the vehicle.
Closing the tailgate

⚠ Drive with the tailgate closed

Only drive with the tailgate closed; otherwise, passengers and other road users may be endangered or the vehicle may be damaged if an accident occurs or during braking or swerving. In addition, exhaust fumes may enter the passenger compartment. ◄

If, despite this, the vehicle must be driven with the tailgate open:
▷ Drive moderately.
▷ Close all windows and the glass sunroof.
▷ Switch off recirculated air mode and greatly increase the blower speed.

Hot exhaust system

⚠ Hot exhaust system

High temperatures are generated in the exhaust system.

Do not remove the heat shields installed and never apply undercoating to them. Make sure that flammable materials, e. g. hay, leaves, grass, etc. do not come in contact with the hot exhaust system during driving, while in idle position mode, or when parked. Such contact could lead to a fire, and with it the risk of serious personal injury as well as property damage.

Do not touch hot exhaust pipes; otherwise, there is the danger of getting burned. ◄

Mobile communication devices in the vehicle

⚠ Mobile communication devices in the vehicle

It is not recommended to use mobile phones, such as mobile phones without a direct connection to an external aerial in the vehicle's passenger compartment. Otherwise, the vehicle electronics and mobile communication devices can interfere with each other. In addition, there is no assurance that the radiation generated during transmission will be discharged from the vehicle interior. ◄

Hydroplaning

On wet or slushy roads, a wedge of water can form between the tires and road surface. This phenomenon is referred to as hydroplaning. It is characterized by a partial or complete loss of contact between the tires and the road surface, ultimately undermining your ability to steer and brake the vehicle.

⚠ Hydroplaning

When driving on wet or slushy roads, reduce your speed to prevent hydroplaning. ◄

The risk of hydroplaning increases as the tire tread depth decreases. Minimum tread depth, refer to page 222.

Driving through water

Drive though calm water only if it is not deeper than 12 inches/30 cm and at this height, no faster than walking speed, up to 6 mph/10 km/h.

Using the parking brake on inclines

⚠ Using the parking brake

On inclines, do not hold the vehicle stationary with a slipping clutch for extended period; use the parking brake instead. Otherwise, the clutch will be subject to increased wear. ◄

Support from the hill drive-off assistant, refer to page 94.

Braking safely

The vehicle is equipped with ABS as a standard feature.

Applying the brakes fully is the most effective way of braking in situations when this is necessary.

The vehicle maintains steering responsiveness. You can still avoid any obstacles with a minimum of steering effort.
Pulsation of the brake pedal and sounds from the hydraulic circuits indicate that ABS is in its active mode.

⚠️ Do not let your foot rest on the brake pedal

Do not drive with your foot resting on the brake pedal. Even light but consistent pedal pressure can lead to high temperatures, brake wear and possibly even brake failure.⚠️

Objects in the area around the pedals

⚠️ No objects in the area around the pedals

Keep floor mats, carpets, and any other objects out of the area of motion of the pedals; otherwise, the function of the pedals could be impeded while driving

Do not place additional floor mats over existing mats or other objects.

Only use floor mats that have been approved for the vehicle and can be properly fixed in place.

Ensure that the floor mats are securely fastened again when they are returned after being removed, such as for cleaning.⚠️

Driving in wet conditions

When roads are wet or there is heavy rain, briefly exert gentle pressure on the brake pedal every few miles.

Ensure that this action does not endanger other road users.

The heat generated in this process helps dry the brake discs and pads.

In this way braking efficiency will be available when you need it.

Hills

Drive long or steep downhill gradients in the gear in which the least braking is required. Otherwise, the brake system may overheat, resulting in a reduction in the brake system efficiency.

You can increase the engine's braking effect by shifting down, going all the way to first gear, if necessary.

Downshifting in manual mode of the Steptronic transmission, refer to page 65.

⚠️ Avoid load on the brakes

Avoid placing excessive load on the brake system. Light but consistent brake pressure can lead to high temperatures, brake wear and possibly even brake failure.⚠️

⚠️ Do not drive in neutral

Never drive with the transmission in neutral, with the engine switched off or with the clutch depressed; otherwise, you will have neither the braking action of the engine nor its power assistance when braking or steering.⚠️

Brake disc corrosion

Corrosion on the brake discs and contamination on the brake pads are furthered by:

▷ Low mileage.
▷ Extended periods when the vehicle is not used at all.
▷ Infrequent use of the brakes.

Corrosion occurs when the minimum pressure that must be exerted by the pads during brake applications to clean the discs is not reached. Should corrosion form on the brake discs, the brakes will tend to respond with a pulsating effect that generally cannot be corrected.

When the vehicle is parked

When using the automatic climate control, condensation water develops that exits underneath the vehicle.

Therefore, traces of condensed water under the vehicle are normal.

After the engine is switched off, the coolant pump may continue running for some time in the MINI Cooper S. This causes noises in the engine compartment.
Driving on poor roads
Your MINI with ALL4 all-wheel drive feels comfortable on all streets and roads. It combines an all-wheel drive system with the advantages of a normal passenger car.

⚠️ Do not drive on unpaved terrain
Do not drive on unpaved terrain, as otherwise the vehicle may be damaged.

For your own safety and the safety of passengers and the vehicle, adhere to the following points:

▷ Familiarize yourself with the vehicle before driving; never take risks.
▷ Adjust speeds according to road conditions. The steeper and rougher the road surface is, the lower the speed should be.
▷ When driving on steep uphill and downhill grades: the engine oil and coolant should be filled nearly to the MAX mark.
▷ Watch for stones, holes, and other obstacles and drive around these where possible.
▷ On bumps and rough roads, avoid contact between the vehicle body and the ground. The maximum ground clearance is 6 inches/15 cm and may vary with the loaded cargo.
▷ When driving through water, do not exceed the maximum water height of 12 inches/30 cm and drive at walking speed.
▷ After driving through water, press on the brake pedal several times at low speeds to dry the brakes.
▷ Depending on the prevailing terrain, activate Dynamic Traction Control DTC briefly, refer to page 93.
▷ When the wheels spin, accelerate to enable the driving stability control systems to distribute the drive force to the individual wheels.

After driving on poor roads
Adhere to the following points to ensure vehicle safety:

▷ Remove excessive accumulations of dirt and mud from the vehicle body.
▷ Clear mud, snow, ice, etc., from the wheels and tires and check for damage.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

DETERMINING THE LOAD LIMIT

1. Locate the following statement on your vehicle’s placard:
   - The combined weight of occupants and cargo should never exceed XXX kg or YYY lbs. Otherwise, damage to the vehicle and unstable driving situations may result.

2. Determine the combined weight of the driver and passengers that will be riding in your vehicle.

3. Subtract the combined weight of the driver and passengers from XXX kilograms or YYY pounds.

4. The resulting figure equals the available amount of cargo and luggage load capacity.
   - For example, if the YYY amount equals 1,000 lbs and there will be four 150 lbs passengers in your vehicle, the amount of available cargo and luggage load capacity is 400 lbs: 1,000 lbs minus 600 lbs = 400 lbs.

5. Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the
available cargo and luggage load capacity calculated in Step 4.

6. If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult the manual for transporting a trailer to determine how this may reduce the available cargo and luggage load capacity of your vehicle.

LOAD

4-seater:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th>Max. Load</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Image" /></td>
<td><img src="image2.png" alt="Image" /></td>
<td><img src="image3.png" alt="Image" /></td>
<td><img src="image4.png" alt="Image" /></td>
<td><img src="image5.png" alt="Image" /></td>
<td><img src="image6.png" alt="Image" /></td>
<td><img src="image7.png" alt="Image" /></td>
</tr>
</tbody>
</table>

5-seater:

<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th></th>
<th>Max. Load</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image8.png" alt="Image" /></td>
<td><img src="image9.png" alt="Image" /></td>
<td><img src="image10.png" alt="Image" /></td>
<td><img src="image11.png" alt="Image" /></td>
<td><img src="image12.png" alt="Image" /></td>
<td><img src="image13.png" alt="Image" /></td>
<td><img src="image14.png" alt="Image" /></td>
</tr>
<tr>
<td><img src="image15.png" alt="Image" /></td>
<td><img src="image16.png" alt="Image" /></td>
<td><img src="image17.png" alt="Image" /></td>
<td><img src="image18.png" alt="Image" /></td>
<td><img src="image19.png" alt="Image" /></td>
<td><img src="image20.png" alt="Image" /></td>
<td><img src="image21.png" alt="Image" /></td>
</tr>
</tbody>
</table>

The maximum load is the sum of the weight of the occupants and the cargo. The greater the weight of the occupants, the less cargo that can be transported.

STOWING CARGO

- Heavy cargo: stow as far forward and as low as possible, ideally directly behind the backrests.
- Cover sharp edges and corners.
- Do not pile cargo higher than the top edge of the backrests.
- If necessary, fold down the rear backrests to stow cargo.
- Use the partition net, refer to page 113, to protect passengers. Make sure that objects cannot penetrate the partition net.
- Place protective material around any sharp-edged or pointed objects that could bump against the rear window while the vehicle is in motion.

MINI Countryman

MINI Paceman

- Very heavy cargo: when the rear seat is not occupied, secure each of the outer safety belts in the opposite buckle.
Securing cargo

Lashing eyes in the cargo area

MINI Countryman

▷ Secure smaller and lighter pieces with tightening belts or straps.

▷ Secure larger and heavier pieces with cargo straps.

   Adhere to the information included with the cargo straps.

▷ Eight mounting eyes are available for fastening the cargo straps.

   Two of them are located on the side wall of the cargo area, arrows 1, and two are located on the rear wall of the cargo area, arrows 2.

MINI Paceman

▷ Secure smaller and lighter pieces with tightening belts or straps.

▷ Secure larger and heavier pieces with cargo straps.

Adhere to the information included with the cargo straps.

▷ Eight mounting eyes are available for fastening the cargo straps.

Stow and secure the cargo as described above; otherwise it may present a danger to the occupants, for instance during braking and avoidance maneuvers.

Do not stow any heavy and hard objects in the passenger compartment without securing them; otherwise, they may present a danger to occupants, for instance during braking and avoidance maneuvers.

Never exceed either the approved gross vehicle weight or either of the approved axle loads, as excessive loads can pose a safety hazard, and may also place you in violation of traffic safety laws.

Do not secure cargo using the upper LATCH mounting points, refer to page 54; otherwise, these may become damaged.

Roof-mounted luggage rack

Notes

A special rack system is available as an optional accessory.

Attachment

Follow the installation instructions for the roof-mounted luggage rack.

Ensure that adequate clearance is available for the movement of the glass sunroof.

Loading

Because roof racks raise the vehicle's center of gravity when loaded, they have a major effect on vehicle handling and steering response. Therefore, note the following when loading and driving:

▷ Do not exceed the approved roof/axle loads and the approved gross vehicle weight.
Distribute the roof load uniformly.

The roof load should not be too large in area.

Always load the heaviest pieces on the bottom.

Fasten the roof-mounted luggage securely, for instance using lashing straps.

Do not let objects project into the opening path of the tailgate.

Drive smoothly. Avoid sudden acceleration and braking maneuvers. Take corners gently.

REAR LUGGAGE RACK

Notes
A special rear rack is available as an optional accessory. It does not require a trailer hitch. Follow the installation instructions for the rear rack.

Anchorage points
MINI Countryman:

MINI Paceman:

The anchorage points are under the covers in the bumper. Push out the covers on the corresponding cut-outs.

Loading
When loading the vehicle, ensure that the approved gross vehicle weight and the axle loads are not exceeded. Adhere to the weight specifications in the technical data.
SAVING FUEL

VEHICLE EQUIPMENT
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

Check the tire inflation pressure regularly
Check and, if necessary, correct the tire inflation pressure, refer to page 216, at least twice a month and before starting on a long trip. Low tire inflation pressure increases rolling resistance and thus raises fuel consumption and tire wear.

Drive away without delay
Do not wait for the engine to warm-up while the vehicle remains stationary. Start driving right away, but at moderate engine speeds. This is the fastest way for the cold engine to reach its operating temperature.

Look well ahead when driving
Avoid unnecessary acceleration and braking. To achieve this, maintain a suitable distance to the vehicle driving ahead of you. Driving smoothly and looking ahead reduces fuel consumption.

Avoid high engine speeds
Use 1st gear to get the vehicle in motion. Beginning with 2nd gear, accelerate rapidly. When accelerating, shift up before reaching high engine speeds.

When you reach the desired speed, shift into the highest applicable gear and drive with the engine speed as low as possible and at a constant speed.

As a rule: driving at low engine speeds lowers fuel consumption and reduces wear.

Use coasting conditions
When approaching a red light, take your foot off the accelerator and coast to a halt in the highest applicable gear.

GENERAL INFORMATION
Your vehicle contains advanced technology for the reduction of fuel consumption and emissions.

Fuel consumption depends on a number of different factors. The implementation of certain measures, driving style and regular maintenance can have an influence on fuel consumption and on the environmental impact.

Remove unnecessary cargo
Additional weight increases fuel consumption.

Remove attached parts following use
Remove unneeded auxiliary mirrors, roof or rear luggage racks after use.

Attached parts on the vehicle impair the aerodynamics and increase the fuel consumption.

Close both windows
Open windows causes higher air resistance and thus increases fuel consumption.

Check the tire inflation pressure regularly
Check and, if necessary, correct the tire inflation pressure, refer to page 216, at least twice a month and before starting on a long trip. Low tire inflation pressure increases rolling resistance and thus raises fuel consumption and tire wear.

Drive away without delay
Do not wait for the engine to warm-up while the vehicle remains stationary. Start driving right away, but at moderate engine speeds. This is the fastest way for the cold engine to reach its operating temperature.

Look well ahead when driving
Avoid unnecessary acceleration and braking. To achieve this, maintain a suitable distance to the vehicle driving ahead of you. Driving smoothly and looking ahead reduces fuel consumption.

Avoid high engine speeds
Use 1st gear to get the vehicle in motion. Beginning with 2nd gear, accelerate rapidly. When accelerating, shift up before reaching high engine speeds.

When you reach the desired speed, shift into the highest applicable gear and drive with the engine speed as low as possible and at a constant speed.

As a rule: driving at low engine speeds lowers fuel consumption and reduces wear.

Use coasting conditions
When approaching a red light, take your foot off the accelerator and coast to a halt in the highest applicable gear.
On a downhill slope, take your foot off the accelerator and coast in a suitable gear.
The flow of fuel is interrupted while coasting.

**Switch off the engine during longer stops**
Switch off the engine during longer stops, e.g., at traffic lights, railroad crossings or in traffic congestion.
Fuel savings are already achieved after the engine is turned off for as little as 4 seconds.

**Switch off any functions that are not currently needed**
Functions such as seat heating and the rear window defroster require a lot of energy and consume additional fuel, especially in city and stop-and-go traffic.
Therefore, switch off these functions if they are not actually needed.

**Have maintenance carried out**
Have vehicles maintained regularly to achieve optimal vehicle economy and operating life.
Have the maintenance carried out by the service center.
Please also note the MINI maintenance system, refer to page 233.
FOLLOW ME.
NAVIGATION SYSTEM

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

NAVIGATION DATA

Information on navigation data
1. "Navigation"
2. Open "Options".
3. "Navigation system version"
   Information is displayed on the data version.

Updating the navigation data

General information
Navigation data are stored in the vehicle and can be updated.

Current navigation data and the authorization code are available from your service center.

▷ Depending on the data volume, a data update may take several hours.
▷ Update during the trip to preserve battery.
▷ The status of the update can be viewed.
▷ The data are stored in the vehicle.
▷ After the updating process is complete, the system restarts.
▷ Remove the medium with the navigation data after the update.

Performing the update
1. Depending on the equipment: insert the USB device with the navigation data into the USB interface in the glove compartment or in the USB audio interface.
2. Follow the instructions on the Control Display.

GENERAL INFORMATION

The navigation system can determine the precise position of the vehicle, with the aid of satellites and vehicle sensors, and can reliably guide you to every entered destination.

Entries in stationary vehicle
Enter data only when the vehicle is stationary, and always give priority to the applicable traffic regulations in the event of any contradiction between traffic and road conditions and the instructions issued by the navigation system. Failure to take this precaution can place you in violation of the law and put vehicle occupants and other road users in danger.

Opening the navigation system
1. "Navigation"
3. Enter the authorization code of the USB device with the navigation data.

4. Drive off.

The update starts after the authorization code is entered.

When the update is completed, the system restarts.
DESTINATION ENTRY

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

Stored town/city and street names can be called up quickly.

▷ If the existing entries should not be changed, the entries for the state/province and town/city can be skipped.
▷ Destination guidance is started to the town/city center if no street is entered.

Entering a state/province

1. "Navigation"
2. "Enter address"

3. Select "State/Province" or the displayed state/province.

Entering a town/city

1. Select "Town/City/Postal Code" or the displayed town/city.

2. Select letters, if necessary.
   The list is narrowed down further with each entry.

AT A GLANCE

In entering your destination, it is possible to select from the following options:

▷ Enter the destination manually, see below.
▷ Select the destination from the address book, refer to page 136.
▷ Last destinations, refer to page 137.
▷ Special destinations, refer to page 138.
▷ Destination entry via map, refer to page 139.
▷ Using the home address as the destination, refer to page 137.
▷ Destination entry by voice, refer to page 140.

MANUAL DESTINATION ENTRY

General information

The system supports you in entering street names and house numbers by automatically completing the entry and providing entry comparisons, refer to page 23.
3. Move the MINI joystick to the right.
4. Select the name of the town/city from the list.

If there are several towns/cities with the same name:

1. Change to the list of town/city names.
2. Highlight the town/city.
3. Select the town/city.

**Entering the postal code**

1. Select "Town/City/Postal Code" or the displayed town/city.
2. Select the symbol.
3. Select the digits individually.
4. Change to the list of postal codes and towns/cities.
5. Highlight the entry.
6. Selecting an entry.

The associated destination town/city is displayed.

**Entering a street and intersection**

1. Select "Street" or the displayed street.
2. Enter a street and intersection in the same way as you would enter a town/city.

If there are several streets with the same name:

1. Change to the list of street names.
2. Highlight the street.
3. Select the street.

**Alternative: enter the street address and house number**

1. Select "Street" or the displayed street.
2. Enter the street as you would the town/city.
3. "House number"
4. Select the numbers.
5. Change to the list of house numbers.
6. Select a house number or range of house numbers.

---

**Street does not exist in the destination city/town**

The desired street does not exist in the specified city/town because it belongs to another part of the city/town.

1. "Navigation"
2. "Enter address"
3. Select "Street" or the displayed street.
4. Change to the list of street names.
5. Select "In" with the state/province currently displayed.

All streets of the selected state/province are offered. The associated town/city is displayed after the street name.

6. Select the letters.
7. Change to the list of street names.
8. Highlight the street.
9. Select the street.

**Starting destination guidance after entering the destination**

1. "Accept destination"
2. "Start guidance" or "Add as another destination"
Add, refer to page 142, a destination as a further destination.

**ADDRESS BOOK**

Create contacts, refer to page 185.

**Selecting a destination from the address book**

1. "Navigation"
2. "Address book"

   Contacts with addresses are displayed if these addresses have been checked as destinations in the contacts.

   If the contacts with addresses from the mobile phone are not displayed, they first need to be checked as destinations, refer to page 187.

3. Select a contact in the list or, if desired, with "A-Z search".
4. "Business address" or "Home address"

**Storing the destination in the address book**

After entering the destination, store the destination in the address book.

1. "Navigation"
2. "Map"
3. "Guidance"
4. Open "Options".
5. "Store as new contact" or "Add to existing contact"

6. Select an existing contact, if available.
7. "Business address" or "Home address"
8. Enter "Last name" and, if necessary, "First name".
9. "Store in vehicle"

**Storing the position**

The current position can be stored in the address book.

1. "Navigation"
2. Open "Options".

3. "Navigation"
4. "Map"
5. "Guidance"
6. Open "Options".
7. "Store as new contact" or "Add to existing contact"
3. "Store position as contact" or "Add position to contact"

4. Depending on the selection, choose an existing contact from the list. Select the type of address and enter the first and last name.

5. "Store in vehicle"

**Editing or deleting an address**

1. "Navigation"
2. "Address book"
3. Highlight the entry.
4. Open "Options".
5. "Edit in Contacts" or "Delete entry"

**Using the home address as the destination**

The home address must be stored. Specify the home address, refer to page 186.

1. "Navigation"
2. "Address book"

3. "Home"

4. "Start guidance"

**LAST DESTINATIONS**

**At a glance**

The destinations previously entered are stored automatically. These destinations can be called up and used as a destination for destination guidance.

**Calling up the last destination**

1. "Navigation"
2. "Last destinations"

**Starting destination guidance**

1. "Navigation"
2. "Last destinations"
3. Select the destination.
4. "Start guidance"
Editing the destination
Destinations can be edited, for example to change the house number of an existing entry.
1. "Navigation"
2. "Last destinations"
3. Highlight the destination.
4. Open "Options".
5. "Edit destination"

Deleting the last destinations
1. "Navigation"
2. "Last destinations"
3. Highlight the destination.
4. Open "Options".
5. "Delete entry" or "Delete all last destinations"

SPECIAL DESTINATIONS

General information
Even with the latest navigation data, information on individual Points of Interest may have changed; for example, gas stations might not be in operation.

Opening the search for Points of Interest
Selection of Points of Interest, such as hotels or tourist attractions.
1. "Navigation"
2. "Points of Interest"
3. Select the search function.

A-Z search
1. "A-Z search"
2. "Town/City"
3. Select or enter the town/city.
4. "Category"
5. Select the category.
6. "Category details"
   For some Points of Interest, it may be possible to select multiple category details.
   Move the MINI joystick to the left to leave the category details.
7. "Keyword"
8. Enter the keyword.
   A list of the Points of Interest is displayed.
9. Select a special destination.
   Details are displayed.
   If multiple details are stored, you can leaf through the pages.
   If a phone number is available, a connection can be established if necessary.
10. Select the symbol.
11. "Start guidance" or "Add as another destination"
    Add a destination as a further destination, refer to page 142.

Category search
1. "Category search"
2. "Search destination"
3. Select or enter the town/city.
4. "Category"
5. Select the category.
6. "Category details"
   For some Points of Interest, it may be possible to select multiple category details.
   Move the MINI joystick to the left to leave the category details.
7. "Start search"
   A list of the Points of Interest is displayed.
8. Select a special destination.
   Details are displayed.
   If multiple details are stored, you can leaf through the pages.
If a phone number is available, a connection can be established if necessary.

9. Select the symbol.
10. "Start guidance" or "Add as another destination"

   Add a destination as a further destination, refer to page 142.

**Position of Points of Interest**

When entering the search location, various options can be selected.

▷ "At current location"
▷ "At destination"
▷ "At different location"
▷ If destination guidance is active: "Along route"

**Starting the search for Points of Interest**

1. "Start search"
2. A list of the Points of Interest is displayed.
   ▷ "At current location"
      The Points of Interest are listed according to their distance and are displayed with a directional arrow pointing to the destination.
   ▷ "At destination", "At different location", "Along route"
      Special destinations are listed according to their distance from the location where the search is being performed.
   ▷ Destinations of the selected category are displayed in the map view as symbols. The display depends on the map scale and the category.
3. Highlight the special destination.
4. Select a special destination.
5. Select the symbol.
6. "Start guidance" or "Add as another destination"

   The direct distance to destination is displayed.

**Displaying Points of Interest in the map**

To display symbols of the Points of Interest in the map view:

1. "Navigation"
2. "Map"
3. Open "Options".
4. "Display Points of Interest"
5. Select the setting.

**DESTINATION ENTRY BY MAP**

**General information**

If only the location of the destination town/city or street is known, the destination can be entered using the map.

**Selecting the destination**

1. "Navigation"
2. "Map"

   The current position of the vehicle is displayed on the map.
3. "Interactive map"

4. Select the destination with crosshairs.
   ▷ To change the scale: turn the MINI joystick.
   ▷ To shift the map: move the MINI joystick in the required direction.
   ▷ To shift the map diagonally: move the MINI joystick in the required direction and turn the MINI joystick.

5. Press the MINI joystick to display additional menu items.
   ▷ Select the symbol: "Start guidance" or "Add as another destination".
   ▷ "Find points of interest": the search for Points of Interest is started.

Specifying the street
If the system does not recognize the street, one of the following pieces of information is displayed:
▷ A street name in the vicinity.
▷ The coordinates of the destination.

Additional functions
On the interactive map, the scale can be adjusted and the map section can be shifted.
Pressing the MINI joysticks makes additional functions available:
   ▷ Select the symbol.
   "Start guidance" or "Add as another destination"
   ▷ "Exit interactive map": return to the map view.
   ▷ Map view
   ▷ "Display destination": the map section around the destination is displayed.
   ▷ "Display current location": the map section around your current location is displayed.
   ▷ "Find points of interest": the search for Points of Interest is started.

DESTINATION ENTRY BY VOICE

General information
▷ Instructions for voice activation system, refer to page 24.
▷ When making a destination entry by voice, you can change between voice activation and the onboard monitor.
▷ To have the available spoken instructions read out loud: ›Voice commands‹.

Saying the entries
▷ Countries, towns and cities, streets, and intersections can be said as whole words or spelled in the language of the system, refer to page 72.
Example: to enter a town/city in a US state as a whole word, the language of the system must be English.

▷ Spell the entry if the spoken language and the language of the system differ.
▷ Say the letters smoothly, and avoid exaggerating the pronunciation and inserting lengthy pauses between the letters.
▷ The methods of entry depend on the navigation data in use and the country and language settings.

**Entering a town/city separately**
The town/city can be said as a complete word.

1. Press the button on the steering wheel.
2. ›City‹ or ›Spell city‹
3. Wait for the system to prompt you for the town/city.
4. Say the name of the town/city, or name at least the first three letters.
5. Select a location:
   ▷ Select a recommended town/city: ›Yes‹.
   ▷ Select a different town/city: ›New entry‹.
   ▷ Select an entry: ›Entry ...‹, for instance, entry 2.
   ▷ Spell an entry: ›Spell city‹.
6. Continue making the entry as prompted by the system.

If there are several towns/cities with the same name:
Towns/cities of the same name are grouped in a list and displayed as one location followed by an ellipsis.

1. Select an entry: ›Yes‹ or ›Entry ...‹, e. g., Entry 2.
2. Select the desired town/city.
   The town/city can also be selected from the list on the onboard monitor:

Turn the MINI joystick until the destination town/city is selected and press the MINI joystick.

**Entering a street or intersection separately**
Enter a street and intersection in the same way as you would enter a town/city.

**Entering a house number separately**
Depending on the data in the navigation system, house numbers up to number 2,000 can be entered.

1. ›House number‹
2. Say the house number.
3. ›Yes‹ to confirm the house number.
4. ›Accept destination‹

**Starting destination guidance**
›Start guidance‹

**Adding further intermediate destinations**
›Add as another destination‹
Further intermediate destinations can be added.

**Storing a destination**
The destination is automatically added to the list of last destinations.

**PLANNING A TRIP WITH INTERMEDIATE DESTINATIONS**

**New trip**
Various intermediate destinations can be entered for a trip. The trip destination needs to be entered first, destination entry, refer to page 134.
Entering intermediate destinations
A maximum of 30 intermediate destinations can be entered for a trip.

1. "Navigation"
2. Select the type of destination entry and enter the intermediate destination.

3. "Add as another destination"

4. Select the position where the intermediate destination is to be inserted.

Starting the trip
After all intermediate destinations have been entered:
"Start guidance"
DESTINATION GUIDANCE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

CONTINUING DESTINATION GUIDANCE

If the destination was not reached during the last trip, destination guidance can be resumed. "Resume guidance"

ROUTE CRITERIA

General information
▷ The route calculated can be influenced by selecting certain criteria.
▷ The route criteria can be changed when the destination is entered and during destination guidance.
▷ Road types are part of the navigation data and are taken into consideration when planning a route, e.g., avoid highways.
▷ The recommended route may differ from the route you would take based on personal experience.
▷ The settings are stored for the remote control currently in use.
▷ Destination guidance with traffic bulletins, refer to page 149.

Changing the route criteria
1. "Navigation"
2. "Map"
3. Select the symbol.
4. "Stop guidance"

STARTING DESTINATION GUIDANCE

1. "Navigation"
2. Make a destination entry, refer to page 134.
3. "Accept destination"
4. "Start guidance"

The route is shown on the Control Display. The distance to the destination/intermediate destination and the estimated time of arrival are displayed in the map view. The arrow view may appear on the Control Display.

TERMINATING DESTINATION GUIDANCE

1. "Navigation"
2. "Map"
3. Select the symbol.
4. "Stop guidance"
"Short route": short distance, irrespective of how fast or slow progress will be.

"Alternative routes": if available, alternative routes are suggested during active destination guidance.

5. Select additional criteria for the route, if necessary. Where possible, the selected criteria are avoided on the route.

- "Avoid highways": highways are avoided wherever possible.
- "Avoid toll roads": toll roads are avoided wherever possible.
- "Avoid ferries": ferries are avoided where possible.

ROUTE

Different views of the route are available during destination guidance:

- Arrow view.
- List of route sections.
- Map view, refer to page 146.

Arrow view

The following information is displayed during destination guidance:

- Large arrow: indicates the current direction of travel.
- Street name of the road currently being driven on.

- Small arrow: indicates the next change in direction.
- Intersection view.
- Lane information.
- Traffic bulletins.
- Distance to the next change in direction.
- Street name at the next change in direction.

Lane information

On multi-lane roads, the recommended lanes are marked in the arrow view by a triangle.

- Solid triangle: best lane.
- Empty triangle: possible lane. However, another lane change may be needed shortly.

Displaying a list of route sections

When destination guidance is active, a list of the route sections can be displayed. The driving distance and traffic bulletins are displayed for each route section.

1. "Navigation"
2. "Route information"

3. Highlight a route section.

BYPASSING A SECTION OF THE ROUTE

Calculate a new route for a route section.

1. "Navigation"
2. "Route information"
3. "New route for"

4. Turn the MINI joystick. Enter the number of kilometers within which you would like to return to the original route.

5. Press the MINI joystick.

**Resuming the original route**
If the route section should no longer be bypassed:

1. "Navigation"
2. "Route information"
3. "New route for:"
4. "Remove blocking"

**GAS STATION RECOMMENDATION**
The remaining range is calculated and gas stations along the route are displayed if needed. Even with the latest navigation data, information on individual Points of Interest may have changed; for example, gas stations might not be in operation.

1. "Navigation"
2. "Route information"
3. "Recommended refuel"
   A list of the gas stations is displayed.
4. Highlight a gas station.
5. Select the gas station.

6. Select the symbol.

7. "Start guidance": destination guidance to the selected gas station is started.

"Add as another destination": the gas station is added to the route.

**DESTINATION GUIDANCE THROUGH VOICE INSTRUCTIONS**

**Switching spoken instructions on/off**
The spoken instructions can be switched on or off during destination guidance.
The setting is stored for the remote control currently in use.

1. "Navigation"
2. "Map"
3. Select the symbol.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>🗝️</td>
<td>The spoken instructions are switched on.</td>
</tr>
<tr>
<td>🗝️</td>
<td>Spoken instructions are switched off.</td>
</tr>
</tbody>
</table>

**Repeating a spoken instruction**

1. "Navigation"
2. "Map"
3. 🗝️ Highlight the symbol.
4. Press the MINI joystick twice.

**Volume of spoken instructions**
Turn the volume button during the spoken instructions until the desired volume is set.
This volume is independent of the volume of the audio sources.
The setting is stored for the remote control currently in use.

MAP VIEW

Selecting the map view
1. "Navigation"
2. "Map"

At a glance

1. Function bar
2. Route section with traffic obstruction
3. Traffic sign for traffic obstruction
4. Planned route
5. Current location
6. Upper status field
7. Lower status field

Lines in the map
Streets and routes are displayed in different colors and styles depending on their classification. Dashed lines represent railways and ferry connections. Country borders are indicated by thin lines.

Traffic obstructions
Small triangles along the planned route indicate route sections with traffic obstructions, depending on the map scale. The direction of the triangles indicates the direction of the obstruction.
The traffic signs indicate the significance of the obstruction.
- Red traffic sign: the obstruction affects the planned route or direction.
- Grey traffic sign: the obstruction does not affect the planned route or direction.

Traffic bulletins, refer to page 147.

Planned route
After destination guidance is started, the planned route is displayed on the map.

Status fields
To show/hide: press the MINI joystick.
- Upper status field: time, telephone, and entertainment details.
- Lower status field: symbol for active destination guidance, status of traffic bulletins, time of arrival, and distance to destination.

Function bar
The following functions are available in the function bar:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>🌐📍📍</td>
<td>Start/end destination guidance.</td>
</tr>
<tr>
<td>📢:border</td>
<td>Switch spoken instructions on/off.</td>
</tr>
<tr>
<td>🤕 должет</td>
<td>Change the route criteria.</td>
</tr>
<tr>
<td>🍂</td>
<td>Search for a special destination.</td>

</tbody>
</table>
Symbol | Function
--- | ---
⚠️ | Display traffic bulletins.
🌐 | Open the interactive map.
☑️ | Adjust the map views.
📍 | Adjust the arrow view.
🔍 | Change the scale.

### Changing the map section

**Interactive map**

- To shift the map: move the MINI joystick in the required direction.
- To shift the map diagonally: move the MINI joystick in the required direction and turn the MINI joystick.

### Changing the scale

1. Select the symbol.
2. To change the scale: turn the MINI joystick.

### Automatically scaled map scale

In the map view facing north, turn the MINI joystick in any direction until the AUTO is displayed for the scale. The entire route between the current location and the destination is displayed on the map.

### Settings for the map view

The settings are stored for the remote control currently in use.

1. "Navigation"
2. "Map"
3. Open "Options".
4. "Settings"
5. To set the map view:
   - "Day/night mode" Select and create the necessary settings depending on the light conditions.

### Arrow view

When destination guidance is activated, the arrow view can additionally be displayed in the map view on the right side of the display.

1. "Navigation"
2. Open "Options".
3. "Arrow display on map"

   The arrow view is shown on the map.

### TRAFFIC BULLETINS

#### At a glance

- Display the traffic bulletins from radio stations that broadcast the TI Traffic Information of a traffic information service. Information on traffic obstructions and hazards is updated continuously.

- The traffic bulletins are indicated on the map by symbols.

⚠️ The symbol in the function bar of the map view turns red if there are traffic bulletins that affect the calculated route.
Real Time Traffic Information End-User Provisions

Certain MINI models equipped with navigation have the capability to display real-time traffic information. If your system has this capability the following additional terms and conditions apply:

An End-User shall no longer have the right to use the Traffic Data in the event that the End-User is in material breach of the terms and conditions contained herein.

A. Total Traffic Network, a division of Clear Channel Broadcasting, Inc. ("Total Traffic Network") holds the rights to the traffic incident data and RDS-TMC network through which it is delivered. You may not modify, copy, scan or use any other method to reproduce, duplicate, republish, transmit or distribute in any way any portion of traffic incident data. You agree to indemnify, defend and hold harmless MINI of North America, LLC. ("MINI NA") and Total Traffic Network, Inrix, Inc (and their affiliates) against any and all claims, damages, costs or other expenses that arise directly or indirectly out of (a) your unauthorized use of the traffic incident data or the RDS-TMC network, (b) your violation of this directive and/or (c) any unauthorized or unlawful activities by you in connection herewith.

B. Total Traffic Network traffic data is informational only. User assumes all risk of use. Total Traffic Network, MINI NA, and their suppliers make no representations about content, traffic and road conditions, route usability, or speed.

C. The licensed material is provided to license "as is," and "where is". Total Traffic Network, including, but not limited to, any and all third party providers of any of the licensed material, expressly disclaims, to the fullest extent permitted by law, all warranties or representations with respect to the licensed material (including, without limitation, that the licensed material will be error-free, will operate without interruption or that the traffic data will be accurate), express, implied or statutory, including, without limitation, the implied warranties of merchantability, non-infringement fitness for a particular purpose, or those arising from a course of dealing or usage of trade.

D. Neither Total Traffic Network, Inrix, Inc. or MINI NA will be liable to you for any indirect, special, consequential, exemplary, or incidental damages (including, without limitation, lost revenues, anticipated revenues, or profits relating to the same) arising from any claim relating directly or indirectly to use of the traffic data, and even if Total Traffic Network, Inrix, Inc., or MINI NA are aware of the possibility of such damages. These limitations apply to all claims, including, without limitation, claims in contract and tort (such as negligence, product liability and strict liability). Some states do not allow the exclusion or limitation of incidental or consequential damages, so those particular limitations may not apply to you.

Switching the reception on/off

1. "Navigation"
2. Open "Options".
3. "Receive Traffic Info"

Open the traffic bulletins

1. "Navigation"
2. "Map"
3. "Traffic Info"
   First, traffic bulletins for the calculated route are displayed.
   The traffic bulletins are sorted by their distance from the current position of the vehicle.
4. Select a traffic bulletin.
   "More information": display additional information.
5. Scroll to the next or previous traffic bulletin if required.

Traffic bulletins on the map

"Traffic conditions/gray map" active:
The Control Display changes to a black and white display. This enables a better view of the traffic bulletins. The day/night mode is disregarded in this setting. Symbols and Points of Interest are not displayed.

1. "Navigation"
2. "Map"
3. Open "Options".
4. "Settings"
5. "Traffic conditions/gray map"

**Symbols in the map view**
Depending on the scale of the map and the location of the traffic obstruction along the route, the symbols for the traffic obstructions are displayed.

**Additional information in the map view**
Depending on the map scale, a traffic obstruction's length, direction, and impact are displayed in the map using triangles or gray bars along the calculated route.

▷ Red: traffic congestion.
▷ Orange: stop-and-go traffic.
▷ Yellow: heavy traffic.
▷ Green: clear roads.
▷ Gray: general traffic bulletins such as road construction.

The displayed information depends on the particular traffic information service.

**Filtering traffic bulletins**
You can set which traffic bulletins appear on the map.

1. "Navigation"
2. "Map"
3. Open "Options".
4. "Traffic Info categories"
5. Select the desired category.

Traffic bulletins of the selected category are displayed on the map.

▷ Traffic bulletins that are relevant to the route are always shown.
▷ For your own safety, traffic bulletins that notify you of potentially dangerous situations cannot be hidden.

**Destination guidance with traffic bulletins**

**General information**
Detour suggestions from the navigation system can be manually accepted when using semi-dynamic destination guidance. When using dynamic destination guidance, they are automatically accepted for route guidance.

**Semi-dynamic destination guidance**
When traffic bulletin reception is switched on, semi-dynamic destination guidance is active. The destination guidance system takes the available traffic bulletins into account. A message is displayed depending on the route, the traffic bulletins, and the possible detour routes. If possible, a detour is offered in case of traffic obstructions. In addition, distance and time differences between the original route and the detour are displayed.

**Accepting the detour**

[Detour]
In the event of special hazards, e.g., objects on the road, a message is displayed without a detour suggestion.

Detours can also be accepted if the traffic messages are called up in the list.

1. "Navigation"
2. "Map"
3. "Traffic Info"
4. "Detour information"
5. "Detour"

Dynamic destination guidance

The route is automatically changed in the event of traffic obstructions.

▷ The system does not point out traffic obstructions along the original route.
▷ Traffic bulletins continue to be displayed on the map.
▷ Depending on road type and the kind and extent of the traffic obstruction, the calculated route may lead through the traffic obstruction.
▷ Dangerous situations are displayed regardless of the setting.

Activating dynamic destination guidance

1. "Navigation"
2. Open "Options".
3. "Dynamic guidance"
WHAT TO DO IF...

▷ The current transmission position cannot be displayed?
  The vehicle is located in an unrecognized region, is in a poor reception area, or the system is currently determining the position. Reception is usually best when you have an unobstructed view of the sky.

▷ The destination without street information is not used for route guidance?
  When city has been input, no downtown can be determined. Input any street in the selected city and start destination guidance.

▷ The destination is not used for route guidance?
  The destination data are not contained in the navigation data. Select a destination that is as close as possible to the original.

▷ Letters for destination input cannot be selected?
  The stored data do not contain the data of the destination. Select a goal that is as close as possible to the original.

▷ Is the map displayed in shades of gray?
  "Traffic conditions/gray map" active:
  The Control Display changes to a black and white display. This enables a better view of the traffic bulletins.

▷ Spoken instructions are no longer output during route guidance in front of intersections?
  The area has not yet been fully recorded, or you have left the recommended route and the system requires a few seconds to calculate a new route suggestion.

▷ Does the navigation system fail to react to entries?

If the battery was disconnected, it takes up to 10 minutes for the system to becoming functional again.
ROCK ME.
TONE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

GENERAL INFORMATION

The sound settings are stored for the remote control currently in use.

TREBLE, BASS, BALANCE, AND FADER

▷ "Treble": treble adjustment.
▷ "Bass": depth adjustment.
▷ "Balance": left/right volume distribution.
▷ "Fader": front/rear volume distribution.

Setting treble, bass, balance, and fader
1. "CD/Multimedia", "Radio" or "Settings"
2. "Tone"
3. Select the desired tone settings.
4. To set: turn the MINI joystick.
5. To save: press the MINI joystick.

VOLUME

▷ "Speed volume": speed-dependent volume control.
▷ "PDC": volume of the PDC signal compared to the entertainment sound output.
▷ "Gong": volume of the signal, such as the safety belt reminder, compared to the entertainment sound output.

Bluetooth mobile phone preparation package
▷ "Microphone": volume of the microphone during a phone call.
▷ "Loudspeak.": volume of the loudspeakers during a phone call.

The following volumes are only stored for the respective paired telephone: "Microphone", "Loudspeak.".

Adjusting the volume
1. "CD/Multimedia", "Radio" or "Settings"
2. "Tone"
3. "Volume settings"
4. Select the desired volume setting.

5. To set: turn the MINI joystick.

6. To save: press the MINI joystick.

RESETTING THE TONE SETTINGS

All tone settings can be reset to the default setting.

1. "CD/Multimedia", "Radio" or "Settings"
2. "Tone"
3. "Reset"
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

CONTROLS

1  CD drive
2  Changing the waveband
3  Changing the audio source
4  Volume, on/off
5  Change station/track
6  Ejecting the CD

SOUND OUTPUT

Switching on/off

When the ignition is switched off: press ON/OFF button on the radio.

Muting

When the ignition is switched on or the engine is running: press the ON/OFF button on the radio.

This symbol at the upper edge of the Control Display indicates that the sound is switched off.

AM/FM STATION

Selecting a station

On the onboard monitor:

1. "Radio"
2. "FM" or "AM"
3. Select the desired station.

Press and hold the MINI joystick to store a station that is displayed in the station list but is not being played. The stations are stored for the remote control currently in use.

Selecting a station manually
Station selection via the frequency.

1. "Radio"
2. "FM" or "AM"
3. "Manual"
4. To select a frequency: turn the MINI joystick.
   To save a station: press and hold the MINI joystick.

Changing the station
Turn and press the MINI joystick or
or
Press the button or
Press the buttons on the steering wheel.
All saved stations are stored for the remote control currently in use.

Storing a station
1. "Radio"
2. "FM" or "AM"
3. Highlight the desired station.

RDS
RDS broadcasts additional information, such as the station name, in the FM wave band.

Switching the RDS on/off
1. "Radio"
2. "FM"
3. Open "Options".
4. "RDS"

The setting is stored for the remote control currently in use.

**HD Radio™ reception**
Many stations broadcast both analog and digital signals.

License conditions
HD Radio Technology manufactured under license from iBiquity Digital Corporation. U.S. and Foreign Patents. HD Radio™ and the HD, HD Radio, and Arc logos are proprietary trademarks of iBiquity Digital Corp.

**Activating/deactivating digital radio reception**
1. "Radio"
2. "FM" or "AM"
3. Open "Options".
4. "HD Radio Reception"
The setting is stored for the remote control currently in use.

This symbol is displayed in the status line when the audio signal is digital.

When tuning to a station with a digital signal, it may take several seconds for the station to be played back in digital quality.

Note on HD stations whose station name ends in ...HD or HD1:
In areas in which the station is not continuously received in digital mode, the playback switches between analog and digital reception. In this case, switch off digital radio reception.

Note on HD multicast stations whose station name ends in ...HD2, ...HD3, ...:
In areas in which the station is not continuously received in digital mode, the audible signal may be interrupted for several seconds. This is reception related.

**Displaying additional information**
Some stations broadcast additional information on the current track, such as the name of the artist.
1. Select the desired station.
2. Open "Options".
3. "Station info"

**Selecting a substation**
This symbol indicates that a main station also broadcasts additional substations. The station name of the main station ends in HD1. Station names of the substations end in HD2, HD3, etc.
1. Select the desired station.
2. Press the controller.
3. Select the substation.
When reception is poor, the substation is muted.

**SATELLITE RADIO**

**General information**
The channels are offered in predefined packages. The packages must be enabled by telephone.

Managing a subscription

To be able to enable or unsubscribe from the channels, you must have reception. It is usually at its best when you have an unobstructed view of the sky. The channel name is displayed in the status line.

Enabling channels
The Unsubscribed Channels category contains all disabled channels.

1. "Radio"
2. "Satellite radio"
3. "Category"
4. Select the Unsubscribed Channels category.
5. Select the desired channel.

The phone number and an electronic serial number, ESN, are displayed.

6. Select the phone number to have the channel enabled.

Managing a subscription

Unsubscribing from channels
1. "Radio"
2. "Satellite radio"
3. Open "Options".
4. "Manage subscription"
5. The phone number and an electronic serial number, ESN, are displayed.
6. Call Sirius to unsubscribe from the channels.

Selecting channels
You can only listen to enabled channels. The selected channel is stored for the remote control currently in use.
Via the onboard monitor
1. "Radio"
2. "Satellite radio"
3. Select "All channels" or the desired category.
4. Select the desired channel.

Via the buttons in the area of the CD player
Press the button.
The next channel is selected.

Via direct channel entry
1. "Radio"
2. "Satellite radio"
3. "Set channel"
4. Turn the MINI joystick until the desired channel is reached and press the MINI joystick.

Storing a channel
1. "Radio"
2. "Satellite radio"
3. If necessary, open "All channels" or the desired category.
4. Select the desired channel.
5. Press the MINI joystick again.
6. Press the MINI joystick again to confirm the highlighted channel.
7. Select the desired memory location.
The channels are stored for the remote control currently in use.

Changing the list view
The list view changes every time the first symbol on the navigation bar is pressed.
Information on the channel is displayed.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>🎤</td>
<td>Channel name</td>
</tr>
<tr>
<td>🎧</td>
<td>Artist</td>
</tr>
<tr>
<td>🎵</td>
<td>Track</td>
</tr>
</tbody>
</table>

Selecting a category
1. "Radio"
2. "Satellite radio"
3. "Category"
4. Select the desired category.

Timeshift
Approx. one hour of the program being broadcast on the channel currently being listened to is stored in a buffer. Prerequisite: the signal must be available.
The stored audio track can be played with a delay following the live broadcast. When the buffer is full, the older tracks are overwritten. The buffer is cleared when a new channel is selected.
Opening the timeshift function
1. "Radio"
2. "Satellite radio"
3. "Replay - Time shift"

▷ The red arrow shows the current playback position.
▷ The time difference to the live broadcast is displayed next to the buffer bar.
▷ For live transmissions "live".

Timeshift menu

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>

<tr>
<td>☰طول]</td>
<td>Automatic timeshift deactivated/activated</td>
</tr>
</tbody>
</table>

Automatic timeshift
When the function is activated, audio playback is stopped automatically in the event of:
▷ Incoming and outgoing telephone calls.
▷ Activation of the voice activation system.
▷ Muting.

The audio playback then continues with a time delay.

Activating
1. "Radio"
2. "Satellite radio"
3. "Replay - Time shift"
4. "Automatic time shift"

Deactivating
"Automatic time shift"

Storing favorites
Up to 30 favorites can be stored in the favorites list. Available favorites are artist, track, game, league, and team.

Storing the artist, track, or game
It is only possible to store favorites that are currently being broadcast. The channel information must be available.
1. "Radio"
2. "Satellite radio"
3. If necessary, open "All channels" or the desired category.
4. Select the desired channel.
5. Press the MINI joystick again.
6. Select the artist, track, or game.

Storing the league or team
Leagues or teams can be added to the favorites from a selection list.
1. "Radio"
2. "Satellite radio"
3. "Manage favorites"
4. "Add sports information"

5. Select the league.

6. Select "Add all teams" or the desired team.

**Opening the favorites**

If an activated favorite is played back, the following message appears for approx. 20 seconds "Favorite alert!".  
⭐⭐ "Favorites"  
Select the symbol while the message is shown.

The displayed favorite is played.  
If there is no message, the system changes to the My Favorites category. All favorites currently being broadcast can be selected from a list.

**Managing the favorites**

**Activating/deactivating the favorites**

Favorites can be activated and deactivated globally and individually.

1. "Satellite radio"  
2. ⭐⭐ "Manage favorites"

3. Select "Activate alert" or the desired favorites.  
The setting is stored for the remote control currently in use.

**Deleting favorites**

1. "Satellite radio"  
2. ⭐⭐ "Manage favorites"  
3. Highlight the desired favorite.  
4. Open "Options".  
5. "Delete entry"

**Traffic Jump**

Traffic and weather information for a selected region is broadcast every few minutes.

**Selecting a region**

1. "Radio"  
2. "Satellite radio"  
3. Open "Options".  
4. "Set jump"  
5. Select the desired region.  
The region is stored for the remote control currently in use.

**Activating/deactivating the jump**

1. "Radio"  
2. "Satellite radio"  
3. ⚙️ "Jump to:"  
Information for the selected region is broadcast as soon as it is available.  
A new panel opens.  
Canceling the Traffic Jump: "Cancel".

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>🔴</td>
<td>Information will be broadcast shortly.</td>
</tr>
<tr>
<td>🔴וב</td>
<td>Information is currently being broadcast.</td>
</tr>
</tbody>
</table>
Select one of the symbols to deactivate Traffic Jump.

**Automatic update**
About twice a year, Sirius performs an update of the channel names and positions. The update takes place automatically and may take several minutes.

**Notes**
▷ Reception may not be available in some situations, such as under certain environmental or topographic conditions. The satellite radio has no influence on this.
▷ The signal may not be available in tunnels or underground garages; next to tall buildings; or near trees, mountains or other powerful sources of radio interference.

**STORED STATIONS**

**General information**
It is possible to store up to 40 stations.

**Calling up a station**
1. "Radio"
2. "Presets"
3. Select the desired station.

**Storing a station**
The station currently selected is stored.
1. "Radio"
2. "Presets"

3. "Store station"

4. Select the desired memory location.
The list of stored stations is stored for the remote control currently in use.

**Deleting a station**
1. "Radio"
2. "Presets"
3. Select the desired station.
4. Open "Options".
5. "Delete entry"
CD/MULTIMEDIA

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

SOUND OUTPUT

Switching on/off

When the ignition is switched off: press ON/OFF button on the radio.

Muting

When the ignition is switched on or the engine is running: press the ON/OFF button on the radio.

This symbol at the upper edge of the Control Display indicates that the sound is switched off.

CD PLAYER

Playback

Inserting the CD

Insert the CD with the printed side facing up. Playback begins automatically.

Reading can take a few minutes with compressed audio files.

Starting playback

A CD is contained in the CD player.

1. "CD/Multimedia"
2. "CD"
3. Select the desired track. Press the MINI joystick to start playback.

Playable formats

▷ Compressed audio files: MP3, WMA, AAC.

Ejecting the CD

Press the button on the CD player. The CD emerges slightly from the drive.
Audio playback

Selecting the track using the button

Press the button for the appropriate direction as often as necessary until the desired track is played back.

Selecting the track on the onboard monitor

Audio CDs

Select the desired track to begin playback.

CDs with compressed audio files

Depending on the data, some letters and numbers of the CD may not be displayed correctly.

1. Select the directory if necessary.
   
   To change to a higher level directory: move the MINI joystick to the left.

Displaying information on the track

If information about a track has been stored, it is displayed automatically:

▷ Artist.
▷ Album track.
▷ Number of tracks on the CD.
▷ File name of track.

Random playback

1. "CD/Multimedia"
2. "CD"
3. Select the desired CD.
4. Open "Options".
5. "Random"

To switch off random playback: press the MINI joystick.

Fast forward/reverse

Press and hold the button for the corresponding direction.

Automatic repeat

The selected track, directories, or CDs are repeated automatically.

Notes

CD player

Do not remove the cover

The CD players are officially designated Class 1 laser products. Do not operate if the cover is damaged; otherwise, severe eye damage can result.

CDs

Using CDs

Do not use self-recorded CDs with labels applied, as these can become detached during playback due to heat buildup and can cause irreparable damage to the device.

▷ Only use round CDs with a standard diameter of 4.7 in/12 cm and do not play CDs with an adapter, e.g., single CDs; otherwise, the CDs or the adapter may jam and no longer eject.

General malfunctions

▷ The CD players have been optimized for performance in vehicles. In some instances they may be more sensitive to faulty CDs than stationary devices would be.

▷ If a CD cannot be played, first check if it has been inserted correctly.

Humidity

High levels of humidity can lead to condensation on the CD or the laser's scan lens, and temporally prevent playback.

Malfunctions with particular CDs

If malfunctions occur only with particular CDs, this can be due to one of the following causes:

Self-recorded CDs

▷ Possible reasons for malfunctions with self-recorded CDs are inconsistent data creation or recording processes, or poor quality or old age of the blank CD.

▷ Only label CDs on the upper side with a pen intended for this purpose.

Damage

▷ Avoid fingerprints, dust, scratches and moisture.

▷ Store CDs in a sleeve.

▷ Do not subject CDs to temperatures over 50 °C/122 °F, high humidity, or direct sunlight.

CDs with copy protection

CDs are often provided with a copy protection feature by the manufacturer. This can mean
that some CDs cannot be played or can only be played to a limited extent.

MACROVISION
This product contains copyrighted technology that is based on multiple registered US patents and the intellectual property of the Macrovision Corporation and other manufacturers. The use of this copy protection must be approved by Macrovision. Media protected by this product - unless otherwise agreed with Macrovision - may only be used for private purposes. Copying of this technology is prohibited.

EXTERNAL DEVICES

At a glance
Various external devices can be connected with the vehicle. Depending on how the device is connected to the vehicle, it may be possible to operate it using the MINI joystick.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>🎧</td>
<td>AUX-IN port</td>
</tr>
<tr>
<td>🎫</td>
<td>USB audio interface</td>
</tr>
<tr>
<td>🎶</td>
<td>Music interface for smartphones</td>
</tr>
<tr>
<td>🎧</td>
<td>Bluetooth audio</td>
</tr>
</tbody>
</table>

AUX-IN port

At a glance
▷ For connecting audio devices, e.g., MP3 player. The sound is output on the vehicle loudspeakers.
▷ Recommendation: use medium tone and volume settings on the audio device. The tone depends on the quality of the audio files.

Connecting
The AUX-IN port is in the center console.
Connect the headphone connector or line-out connector of the device to the AUX-IN port.
Ensure that the connector is inserted all the way into the AUX-IN port.

Playback
1. Connect the audio device, switch it on and select a track on the audio device.
2. "CD/Multimedia"
3. If necessary, "External devices"

4. 🎧 "AUX front"
Sound is output on the vehicle loudspeakers.

Volume
The volume of the sound output is dependent on the audio device. If this volume differs markedly from the volume of the other audio sources, it is advisable to adjust the volumes.

Adjusting the volume
1. "CD/Multimedia"
2. If necessary, "External devices"
3. 🎧 "AUX front"
4. "Volume"

5. Turn the MINI joystick until the desired volume is set and press the MINI joystick.

USB audio interface/music interface for smartphones

At a glance
It is possible to connect external audio devices. They are operated via the onboard monitor. The sound is output on the vehicle loudspeakers.

Connectors for external devices
- Connection via USB audio interface: Apple iPod/iPhone, USB devices, e.g., MP3 players, USB flash drives, or mobile phones that are supported by the USB audio interface.
- Connection via snap-in adapter, when equipped with the music interface for smartphones: Apple iPhone or mobile phones.

Playback is only possible if no audio device is connected to the analog AUX-IN port.

Due to the large number of different audio devices available on the market, it cannot be ensured that every audio device/mobile phone is operable on the vehicle.

Ask your service center about suitable audio devices/mobile phones.

Audio files
Standard audio files can be played back:
- MP3.
- WMA.
- WAV (PCM).
- AAC, M4A.
- Without the voice activation system: playback lists: M3U
- With the voice activation system: playback lists: M3U, WPL, PLS

Video files
Standard video files can be played back with a compatible Apple device:
- MPEG4
- H.264

File system
Standard file systems for USB devices are supported. The FAT 32 format is recommended.

Connecting
The USB audio interface is in the center console.

Connection of Apple iPod/iPhone via USB audio interface
To connect the iPod, use the special cable adapter for the Apple iPod. Additional information can be obtained from the service center or on the Internet: www.mini.com/connectivity.

Connect the Apple iPod/iPhone with the AUX-IN port and USB interface.

The Apple iPod/iPhone menu structure is supported by the USB audio interface.

Connection of a USB device via the USB audio interface
Connect using a flexible adapter cable to protect the USB audio interface and the USB device against physical damage.

Connect the USB device to the USB interface.
After connecting for the first time
Information on all music tracks, e.g. artist or type of music, as well as playback lists are transmitted into the vehicle. This may take some time, depending on the USB device and the number of tracks.
During transmission, the tracks can be called up via the file directory.

Number of tracks
Information from up to four USB devices or for approx. 26,000 tracks can be stored in the vehicle. If a fifth device is connected or if more than 26,000 tracks are stored, information on existing tracks may be deleted.

Copy protection
Music tracks with integrated Digital Rights Management (DRM) cannot be played.

Audio playback
1. "CD/Multimedia"
2. "External devices"
3. Select the † or  symbol.
The playback starts with the first track.
The CD cover belonging to the track may appear on the Control Display after several seconds.

Track search
Selection is possible via:
▷ Playback lists.
▷ Information: type of music, artist, and, if available, composer, album, track.
▷ Additionally for USB devices: file directory, composer.
Tracks are displayed if they have been saved in the Latin alphabet.

Starting the track search
1. "CD/Multimedia"
2. "External devices"
3. Select the † or  symbol.

4. "Search"
5. Select the desired category, e.g., "Genre" or "Artist".
All entries are displayed in a list.
▷ Open "A-Z search" and input the desired entry.
When a letter is entered, the results are filtered using this letter as the first letter. If multiple letters are entered, all results that contain that sequence are displayed.
▷ Select the desired entry from the list.

6. Select other categories if you wish.
Not all categories need to be selected. For example, if all of the tracks by a certain artist are to be displayed, call up that artist only. All of the tracks by that artist are then displayed.
7. "Play"

Restarting a track search
"New search"
Playback lists
Calling up playback lists.
1. "CD/Multimedia"
2. "External devices"
3. Select the ↓ or ➤ symbol.
4. "Playlists"

Current playback
List of tracks currently being played.
1. "CD/Multimedia"
2. "External devices"
3. Select the ↓ or ➤ symbol.
4. "Current playback"

Random playback
The current list of tracks is played back in random order.
1. "CD/Multimedia"
2. "External devices"
3. Open "Options".
4. "Random"

Fast forward/reverse
Buttons on the steering wheel or on the CD player:

Press and hold the button for the corresponding direction.

Video playback
At a glance
Video playback is only possible with a compatible iPod/iPhone. Connect using a video-capable adapter cable or, if applicable, a snap-in adapter.

Playback
The video image on the Control Display is displayed while the vehicle is stationary; in some countries, the parking brake must be set or P must be engaged.
1. "CD/Multimedia"
2. "External devices"
3. Select the ↓ or ➤ symbol.
4. "Video"
5. Select the desired file.
   Select the category in the file directory.
6. Press the MINI joystick.
   Playback of the selected video file starts.

Notes
Do not expose the audio device to extreme environmental conditions, such as very high temperatures; refer to the audio device operating instructions.
Depending on the configuration of the audio files, e.g., bit rates greater than 256 kbit/s, the files may not play back correctly in each case.
Audio and video playback from the snap-in adapter is only possible if no cable is connected to the AV-IN port.
Information on connection

▷ The connected audio device is supplied with a max. power of 500 mA if supported by the device. Therefore, do not additionally connect the device to a socket in the vehicle; otherwise, playback may be compromised.

▷ Do not use force when plugging the connector into the USB interface.

▷ Do not connect devices such as fans or lamps to the USB audio interface.

▷ Do not connect USB hard drives.

▷ Do not use the USB audio interface to recharge external devices.

Bluetooth audio

At a glance

▷ Music files on external devices such as audio devices or mobile phones can be played back via Bluetooth.

Use of a mobile phone as an audio source, refer to page 190.

▷ Bluetooth® is a registered trademark of Bluetooth® SIG, Inc.

▷ The sound is output on the vehicle loudspeakers.

▷ The volume of the sound output is dependent on the device. If necessary, adjust the volume on the device.

▷ Up to four external devices can be paired with the vehicle.

Requirements

▷ The device is suitable. Information under www.mini.com/connectivity.

▷ The device is ready for operation.

▷ The ignition is switched on.

▷ Bluetooth is activated on the vehicle, refer to page 189, and on the device.

▷ Bluetooth presettings must be made on the device, such as for a connection without confirmation or visibility; refer to the device operating instructions.

▷ A number with at least four and a maximum of 16 digits is defined as the Bluetooth passkey. It is only required once for pairing.

Pairing and connecting

Pairing a device

To avoid becoming distracted and posing an unnecessary hazard both to your own vehicle's occupants and to other road users, only pair the device while the vehicle is stationary. ◄

1. "CD/Multimedia"
2. "Bluetooth® (audio)"
3. If necessary, "Bluetooth® audio"
4. "Add new phone"

The Bluetooth name of the vehicle is displayed.

5. Perform additional steps on the device, refer to the device operating instructions: for instance, search for or connect the Bluetooth device or a new device.

The Bluetooth name of the vehicle appears on the device display.

6. Select the Bluetooth name of the vehicle on the device display.

You are prompted by the onboard monitor or device to enter the same Bluetooth passkey.

7. Enter the passkey and confirm.

or
Compare the control number on the vehicle display with the control number on the mobile phone display. Confirm the control number on the mobile phone and in the vehicle. "OK"

8. Select the desired functions with which the device is to be connected, for instance "Audio".

9. "OK"

If pairing was successful, the device is displayed as connected.

White symbol 🎵 : the device is active as an audio source.

If pairing was unsuccessful: What to do if..., refer to page 173.

Connecting a specific device

A device that has already been paired can be connected as an active audio source.

Connecting is not possible when data is exchanged via a mobile phone connected via Bluetooth.

Requirements

If necessary, activate the audio connection of the desired device from the list of paired devices.

1. "CD/Multimedia"
2. "Bluetooth® (audio)"
3. If necessary, "Bluetooth® audio"

4. Select the desired device from the list of paired devices.

5. Open "Options".

6. "Configure phone"

7. Activate "Audio".

8. "OK"

Connecting the device

1. "CD/Multimedia"
2. "Bluetooth® (audio)"
3. If necessary, "Bluetooth® audio"
4. Select the desired device from the list of paired devices.

White symbol 🎵 : the device is active as an audio source.

Playback

General information

▷ The display of music track information depends on the device.

▷ Operation can takes place on the device or onboard monitor.

▷ Playback is interrupted when data is exchanged via a mobile phone connected via Bluetooth.

Starting playback

1. Connect the device.
2. "CD/Multimedia"
3. "External devices"
4. Select the symbol.

5. Select the desired track from the list, if necessary.

Playback menu
Depending on the particular device, some of the functions may not be available.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
</table>
| ▶️     | Next track
      | Fast forward: press and hold the symbol. |
| ▾      | Previous music track
      | Reverse: press and hold the symbol. |

Track search
Music track search is possible depending on the device.

1. "CD/Multimedia"
2. "External devices"
3. Select the symbol.
4. "Search device content"
5. "A-Z search"
6. Select the desired entry or directory.

Playback mode
Depending on the device, different programs for playing back music files might be available.

1. "CD/Multimedia"
2. "External devices"
3. Select the symbol.

4. Open "Options".
5. Open "Select player".
6. Select the desired channel.

Disconnecting the audio connection
1. "CD/Multimedia"
2. "Bluetooth® (audio)"
3. Highlight the desired device.
4. Open "Options".
5. "Configure phone"
6. "Audio"
7. "OK"

In the case of a mobile phone, only the audio connection is disconnected. All other connections are retained.

Unpairing a device
1. "CD/Multimedia"
2. "Bluetooth® (audio)"
3. If necessary, "Bluetooth® audio"
4. Highlight the device that is to be unpaired.
5. Open "Options".
6. "Remove phone from list"

What to do if...
Information on suitable devices can be found at www.mini.com/connectivity.
Suitable mobile phones, refer to page 188.
The device is not supported by the vehicle.
▷ Perform a software update, refer to page 174, if needed.
The device could not be paired or connected.

▷ Do the Bluetooth passkeys on the device and the vehicle match? Enter the same passkey on the device and via the onboard monitor.

▷ A multi-character passkey may be needed.

▷ Did it take longer than 30 seconds to enter the passkey? Repeat the pairing procedure.

▷ Are too many Bluetooth devices connected to the device or vehicle? Delete connections with other devices if necessary.

▷ Is the mobile phone in power-save mode or does it have only a limited remaining battery life? Charge the mobile phone in the snap-in adapter or via a charging cable.

▷ Depending on the mobile phone, it is possible that only one device can be connected to the vehicle. Unpair the connected device from the vehicle and pair and connect only one device.

▷ The device no longer reacts? Switch the device off and on again.

▷ Repeat the pairing procedure.

Music cannot be played back.

▷ Start the program for playing back music data on the device and select a track on the device if necessary.

▷ Switch the radio on and off again.

Music files can only be played back softly.

▷ Adjust the volume settings on the device.

Videos can only be played back without audio or with delayed audio.

▷ Check the compatibility of the devices. Information under www.mini.com/connectivity.

Playback is disturbed when buttons are pressed or by other messages on the device.

▷ Switch off the button tones and other signal tones on the device.

Playback is interrupted by a telephone call or traffic bulletin and is not resumed automatically.

▷ Switch the radio on and off again.

Playback is not possible if the mobile phone is connected via Bluetooth Audio while it is also connected via the music interface for smartphones in the snap-in adapter.

▷ Disconnect one of the two connections; for example, disconnect the audio connection, refer to page 173, and restart playback.

If all points in this list have been checked and the required function is still not available, please contact the hotline or service center.

Software Update

The vehicle supports various external devices depending on the current software version. With a software update, the vehicle can support new mobile phones or new external device, for example.

Software updates and related current information is available at www.mini.com/connectivity.

Displaying the current version

The currently installed software is displayed.

1. "Settings"
2. "Software update"
3. "Show current version"

Updating the software

The software may only be updated when the vehicle is stationary.

1. Store the file for the software-update in the main directory of a USB flash drive.
2. Insert the USB flash drive into the USB audio interface in the center console. An update via the USB interface in the glove compartment is not possible.
3. "Settings"
4. "Software update"
5. "Update software"

6. "Start update"
7. "OK"

All listed software updates are installed.

**Restoring the previous version**

The software version prior to the last software update can be restored.

The previous version can only be restored when the vehicle is stationary.

1. "Settings"
2. "Software update"
3. "Restore previous version"
4. "OK" Double-click.

All listed software updates are removed.

**Note**

While the software is being updated or a previous version is being restored, MINI Connected, Office functions, and the connected devices are temporarily unavailable. Wait several minutes for the functions to become available again.
CONNECT ME.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AT A GLANCE

The concept
Mobile phones can be connected with the vehicle via Bluetooth.
Bluetooth® is a registered trademark of Bluetooth® SIG, Inc.

After these devices are paired once, they are recognized automatically when the ignition is switched on as soon as they are in the vehicle and can then be operated via the onboard monitor, using the buttons on the steering wheel, and via voice activation.

Up to four external devices can be paired.
Certain functions may need to be enabled by the mobile phone provider or service provider.

Using the mobile phone while driving
Make entries only when traffic and road conditions allow. Do not hold the mobile phone in your hand while you are driving; use the hands-free system instead. If you do not observe this precaution, you can endanger the vehicle occupants and other road users.

Approved mobile phones
Details on which mobile phones are supported by the hands-free system can be obtained at www.mini.com/connectivity.

Displaying the vehicle identification number and software part number
The vehicle identification number and software part number are needed to determine which mobile phones are supported by the mobile phone preparation package. The software version of the mobile phone may also be required.

1. "Telephone"
2. Open "Options".
3. "Bluetooth® info"
4. "Display system information"

These approved mobile phones with a certain software version, support the vehicle functions described below.

Malfunctions may occur with other mobile phones or software versions.

Do not operate a mobile phone that is connected to the vehicle on the mobile phone keypad, as this may lead to a malfunction.

Notes
At high temperatures, the charging function of the mobile phone may be limited and functions may not be executed.

When using the mobile phone via the vehicle, note the operating instructions of the mobile phone.
PAIRING/UNPAIRING THE MOBILE PHONE

Requirements
▷ The mobile phone is suitable, refer to page 178.
▷ The mobile phone is ready for operation.
▷ Bluetooth is activated in the vehicle and on the mobile phone.
▷ Bluetooth presets may need to be made on the mobile phone, e.g., for a connection without confirmation or visibility, refer to the mobile phone operating instructions.
▷ Deactivate Bluetooth audio if necessary.
▷ A number with at least four and a maximum of 16 digits was defined as the Bluetooth passkey. It is only required once for pairing.
▷ Compare the control number on the Control Display with the control number on the mobile phone display. Confirm the control number on the mobile phone and in the vehicle.
▷ The radio ready state is switched on.

Activating/deactivating Bluetooth
Bluetooth is not permitted everywhere. Comply with all safety guidelines and regulations.
1. "Telephone"
2. Open "Options".
3. "Bluetooth®"

Pairing and connecting a mobile phone
⚠ Pairing the mobile phone
To avoid becoming distracted and posing an unnecessary hazard both to your own vehicle's occupants and to other road users, only pair the mobile phone while the vehicle is stationary.
1. "Telephone"
2. "Bluetooth® (phone)"
3. "Add new phone"
The Bluetooth name of the vehicle is displayed.
4. To perform additional steps on the mobile phone, refer to the mobile phone operating instructions: for instance, search for or connect the Bluetooth device or a new device. The Bluetooth name of the vehicle appears on the mobile phone display.
5. Select the Bluetooth name of the vehicle on the mobile phone display.
6. You are prompted by the onboard monitor or mobile phone to enter the same Bluetooth passkey. Enter the passkey and confirm.
   or
   Compare the control number on the vehicle display with the control number on the mobile phone display. Confirm the control number on the mobile phone and in the vehicle.
7. Select the functions for which the mobile phone is to be used.
8. "OK"
9. Move the MINI joystick to the left.

If the pairing was successful, the mobile phone appears at the top of the list of mobile phones.
If pairing was unsuccessful: What to do if..., refer to page 180.

Following the initial pairing
▷ The mobile phone is detected/connected in the vehicle within a short period of time when the engine is running or the ignition is switched on.
▷ The phone book entries of the telephone stored on the SIM card or mobile phone are transmitted to the vehicle after detection, depending on the mobile phone.
▷ Four mobile phones can be paired.
▷ Specific settings may be necessary in some mobile phones, e.g., authorization or a secure connection; refer to the mobile phone operating instructions.

Connecting a particular mobile phone
1. "Telephone"
2. "Bluetooth® (phone)"
   All paired mobile phones are listed.
3. Select the mobile phone that is to be connected.

Unpairing the mobile phone
1. "Telephone"
2. "Bluetooth® (phone)"
   All paired mobile phones are listed.
3. Highlight the mobile phone that is to be unpaired.
4. Open "Options".
5. "Remove phone from list"

What to do if...
Information on suitable mobile phones, refer to page 178.
The mobile phone could not be paired or connected.
▷ Is Bluetooth activated in the vehicle and on the mobile phone? Activate Bluetooth in the vehicle and on the mobile phone.
▷ Do the Bluetooth passkeys on the mobile phone and the vehicle match? Enter the same passkey on the mobile phone and via the onboard monitor.
▷ A multi-character passkey may be needed.
▷ Did it take longer than 30 seconds to enter the passkey? Repeat the pairing procedure.
▷ Are too many Bluetooth devices connected to the mobile phone or vehicle? Delete connections with other devices if necessary.
▷ The mobile phone is in power-save mode or has only a limited remaining battery life. Charge the mobile phone via the charging cable.
▷ Depending on the mobile phone, it is possible that only one mobile phone can be connected to the vehicle. Unpair the connected mobile phone from the vehicle and pair and connect only one mobile phone.

The mobile phone no longer reacts.
▷ Switch the mobile phone off and on again.
▷ Is the ambient temperature too high or low? Do not expose the mobile phone to extreme environmental conditions.

No phone book entries or only some phone book entries are displayed, or they are incomplete.
▷ Transmission of the phone book entries is not yet complete.
▷ It is possible that only the phone book entries of the mobile phone or the SIM card are transmitted.
▷ It may not be possible to display phone book entries with special characters.
▷ The number of phone book entries to be stored is too high.
▷ Is the data volume of the contact too large, e.g., due to stored information such as notes? Reduce the data volume of the contact.

The phone connection quality is poor.
▷ The strength of the Bluetooth signal on the mobile phone can be adjusted, depending on the mobile phone.
▷ Place the mobile phone in the area of the center console.

If all points in this list have been checked and the required function is still not available, contact Customer Relations or the service center.

CONTROLS

Adjusting the volume

Turn the knob until the desired volume is selected. The setting is stored for the remote control currently in use.

Incoming call

Receiving calls

If the number of the caller is stored in the phone book and is transmitted by the network, the name of the contact is displayed. Otherwise, only the phone number is displayed.

If more than one phone number is assigned to a contact, only the name of the contact is displayed.

Accepting a call

Press the button on the steering wheel.

or

"Accept"
Rejecting a call

"Reject"

Ending a call

Press the button on the steering wheel.

or

1. "Telephone"
2. "End call"

Entering a phone number

Dialing a number

1. "Telephone"
2. "Dial number"

3. Select the digits individually.
4. Select the symbol.

The phone number can also be entered by voice.

Calls with multiple parties

General information

You can switch between calls or connect two calls to a single conference call. These functions must be supported by the mobile phone and service provider.

Accepting a call while speaking to another party

This function might have to be activated by the service provider and the mobile phone must be adjusted accordingly.

If a second call comes in during an ongoing call, a call waiting signal is sounded.

"Accept"

The call is accepted and the existing call is put on hold.

Establishing a second call

Establish an additional call during an active call.

1. "Telephone"
2. "Active calls"
3. "Hold"
The existing call is put on hold.

4. Dial the new phone number or select it from a list.
"Return"
The call on hold is resumed.

Switching between two calls, hold call
Active call: highlighted.
Call on hold identified by: "on hold...".
Select the symbol to change to the call on hold.

Establishing a conference call
Two calls can be connected to a single telephone conference call.

1. Establish two calls.
2. "Conference call"

When terminating a conference call, both calls are ended. If one call is terminated by another party, the other call can be continued.

DTMF suffix dialing
DTMF suffix dialing can be used for gaining access to network services or for controlling devices, e.g., to make a remote inquiry of an answering machine. The DTMF code is needed for this purpose.

1. "Telephone"
2. Select the contact from a list or "Dial number".
3. "Keypad dialing"

4. Enter the DTMF code on the onboard monitor.
DTMF suffix dialing is not possible during conference calls.

Phone book
Displays
The phone book accesses the contacts and shows all contacts for which a phone number has been stored. The entries can be selected to make a call.

1. "Telephone"
2. "Phone book"
A symbol indicates the storage location of the contacts.
Calling a contact

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>✉️</td>
<td>Contact with one stored phone number.</td>
</tr>
<tr>
<td>☑️</td>
<td>Contact with more than one stored phone number.</td>
</tr>
<tr>
<td>⚠️</td>
<td>Call not possible; mobile phone without reception or network.</td>
</tr>
</tbody>
</table>

For contacts with one stored phone number: select the required contact. The connection is being established.

For contacts with more than one stored phone number: select the required contact and the phone number. The connection is being established.

Editing a contact

Changing the entries in "Contacts". When a contact is changed, the changes are not stored on the mobile phone. A copy of the entry is stored in the vehicle.

1. Highlight the contact.
2. Open "Options".
3. "Edit entry"
The contact can be edited.

Redialing

General information

The list of dialed numbers in the mobile phone is transmitted to the vehicle depending on the mobile phone. Possibly only those numbers are displayed that were dialed from the vehicle.

The 20 phone numbers dialed last are displayed. The sorting order of the phone numbers depends on the particular mobile phone.

1. "Telephone"
2. "Redial"

3. Select the desired entry and the phone number if necessary.
The connection is established.

Deleting a single entry or all entries

The deletion of entries depends on your particular mobile phone.

1. Highlight the entry.
2. Open "Options".
3. "Delete entry" or "Delete list"

Saving an entry in the contacts

1. Highlight the entry.
2. Open "Options".
3. "Store as new contact" or "Add to existing contact"
4. Select the contact if necessary.
5. Select the type of number: "Home", "Business", "Mobile" or "Other"
6. Complete the entries if necessary.
7. "Store contact"

Received calls

Displaying calls

The list of received calls on the mobile phone is transmitted to the vehicle, depending on the particular mobile phone. It is possible that only
those calls are displayed that were received in the vehicle.

The 20 telephone calls that were last received are displayed. The sorting order and display of the phone numbers depends on the particular mobile phone.

1. "Telephone"
2. "Received calls"

![Image of a mobile phone interface with options for telephone and received calls]

**Calling a number from the list**
Selecting an entry.
The connection is established.

**Deleting a single entry or all entries**
The deletion of entries depends on your particular mobile phone.

1. Highlight the entry.
2. Open "Options".
3. "Delete entry" or "Delete list"

**Saving an entry in the contacts**

1. Highlight the entry.
2. Open "Options".
3. "Store as new contact" or "Add to existing contact"
4. Select the contact if necessary.
5. Select the type of number: "Home", "Business", "Mobile" or "Other"
6. Complete the entries if necessary.
7. "Store contact"

**Hands-free system**

**General information**
Calls that are being made on the hands-free system can be continued on the mobile phone and vice versa.

**From the mobile phone to the hands-free system**
Calls that were begun outside of the Bluetooth range of the vehicle can be continued on the hands-free system with the ignition switched on.

Depending on the mobile phone, the system automatically switches to the hands-free system.

If the system does not switch over automatically, follow the instructions on the mobile phone display; refer also to the mobile phone operating instructions.

**From the hands-free system to the mobile phone**
Calls that are made on the hands-free system can in some cases be continued on the mobile phone; this depends on the mobile phone.

Follow the instructions on the mobile phone display; refer also to the mobile phone operating instructions.

**CONTACTS**

**General information**
Contacts can be created and edited.
Contacts can be created and edited and the addresses can be adopted as destinations for navigation.
New contact

1. "Contacts"
2. "New contact"
3. The entry fields are still filled with the previous entries: "Delete input fields"
4. Fill in the entry fields: select the symbol next to the entry field.
5. Enter the text, refer to page 22.
   If the vehicle is equipped with a navigation system: enter the address. Only addresses contained in the navigation data in the vehicle can be entered. This ensures that destination guidance is possible for all addresses.
6. If necessary, "Store"
7. "Store contact in vehicle"

Specifying the home address

A home address can be stored. It appears at the top of the contact list.

1. "Home"
2. Create a contact.
3. "Store contact in vehicle"

My contacts

General information

List of all contacts stored in the vehicle.

Displaying contacts

1. "Contacts"
2. "My contacts"

All contacts are listed in alphabetical order. Depending on the number of contacts, an A-Z search is offered.

A symbol indicates the storage location of the contacts:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Storage location</th>
</tr>
</thead>
<tbody>
<tr>
<td>![No symbol]</td>
<td>In the vehicle; the address has not been checked as a destination.</td>
</tr>
<tr>
<td>![Symbol]</td>
<td>In the vehicle; the address has been checked as a destination.</td>
</tr>
<tr>
<td>![Mobile phone]</td>
<td>Mobile phone</td>
</tr>
</tbody>
</table>
Editing a contact
1. Select the desired contact.
2. "Edit contact"
3. Change the entries.
4. Move the MINI joystick to the left.
5. "Yes"

If a contact from the mobile phone is edited, the changes are not stored on the mobile phone. A copy of the entry is stored in the vehicle, and only this copy is displayed. Under certain circumstances, a contact entry with the same name is created.

Selecting the contact as a navigation destination
1. Select the desired contact.
2. Select the address.
3. "Start guidance" or "Add as another destination"

Checking the address as a destination
An address that is to be used for destination guidance must match the navigation data contained in the vehicle. The address can be checked for this purpose.
1. Select the desired contact and highlight the address.
2. Open "Options".
3. "Check as destination"
4. Correct and store the address if necessary.

Selecting the sorting order of the names
Names can be displayed in a different order.
1. "My contacts"
2. Open "Options".
3. "Display: last, first name" or "Display: first, last name"

Depending on how the contacts are stored on the mobile phone, the sorting order of the names may differ from the selected sorting order.

Deleting contacts
1. "My contacts"
2. Highlight the contact.
3. Open "Options".
4. "Delete contact" or "Delete all contacts"
BLUETOOTH MOBILE PHONE PREPARATION PACKAGE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AT A GLANCE

The concept

Mobile phones or other external devices such as audio players can be connected to the vehicle via Bluetooth.

Bluetooth® is a registered trademark of Bluetooth® SIG, Inc.

After these devices are paired once, they are recognized automatically when the ignition is switched on as soon as they are in the vehicle and can then be operated via the onboard monitor, using the buttons on the steering wheel, and via voice activation.

Depending on their functionality, external devices can be used via the vehicle as a telephone or as an audio source. The telephone functions are described in the following. Operating the audio functions, refer to page 171.

Up to four external devices can be paired.

Certain functions may need to be enabled by the mobile phone provider or service provider.

Snap-in adapter

The snap-in adapter is used to:

- Hold the mobile phone.
- Recharge the battery.
- Connect the mobile phone to an outside antenna of the vehicle.

This provides for better network reception and consistent sound quality.

Approved mobile phones

Displaying the vehicle identification number and software part number

The vehicle identification number and software part number are needed to determine which mobile phones are supported by the mobile phone preparation package. The software version of the mobile phone may also be required.

1. "Telephone"
2. Open "Options".
3. "Bluetooth® info"
4. "Display system information"

These approved mobile phones with a certain software version, support the vehicle functions described below.

Malfunctions may occur with other mobile phones or software versions.

Using the mobile phone while driving

Make entries only when traffic and road conditions allow. Do not hold the mobile phone in your hand while you are driving; use the hands-free system instead. If you do not observe this precaution, you can endanger the vehicle occupants and other road users.⚠️

Snap-in adapter

The snap-in adapter is used to:

- Hold the mobile phone.
- Recharge the battery.
- Connect the mobile phone to an outside antenna of the vehicle.

This provides for better network reception and consistent sound quality.

Approved mobile phones

Displaying the vehicle identification number and software part number

The vehicle identification number and software part number are needed to determine which mobile phones are supported by the mobile phone preparation package. The software version of the mobile phone may also be required.

1. "Telephone"
2. Open "Options".
3. "Bluetooth® info"
4. "Display system information"

These approved mobile phones with a certain software version, support the vehicle functions described below.

Malfunctions may occur with other mobile phones or software versions.
Do not operate a mobile phone that is connected to the vehicle on the mobile phone keypad, as this may lead to a malfunction.

**Notes**
At high temperatures, the charging function of the mobile phone may be limited and functions may not be executed.
When using the mobile phone via the vehicle, note the operating instructions of the mobile phone.

### PAIRING/UNPAIRING THE MOBILE PHONE

**General information**
The following functions are available:
- Use of a mobile phone as a telephone.
- Use of a mobile phone as an additional telephone.
- Use of a mobile phone as an audio source.
- Use of an audio device as an audio source, refer to page 171.

**Requirements**
- The mobile phone is suitable, refer to page 188.
- The mobile phone is ready for operation.
- Bluetooth is activated in the vehicle and on the mobile phone.
- Bluetooth presets may need to be made on the mobile phone, e.g., for a connection without confirmation or visibility, refer to the mobile phone operating instructions.
- Deactivate Bluetooth audio if necessary.
- Compare the control number on the Control Display with the control number on the mobile phone display. Confirm the control number on the mobile phone and in the vehicle.
- A number with at least four and a maximum of 16 digits was defined as the Bluetooth passkey. It is only required once for pairing.
- The radio ready state is switched on.

**Activating/deactivating Bluetooth**
Bluetooth is not permitted everywhere. Comply with all safety guidelines and regulations.
1. "Telephone"
2. Open "Options".
3. "Bluetooth®"

**Additional functions**

**Activating/deactivating the additional functions**
Activate the functions before pairing to be able to use them in the vehicle. Information on suitable mobile phones, refer to page 188, that support this function.
1. "Telephone"
2. "Bluetooth® (phone)"
3. Open "Options".
4. "Configure Bluetooth®"
5. Select the desired additional function.
   - "Additional telephone"
   - "Office"
   - "Bluetooth® audio"
6. "OK"
An additional function cannot be assigned to a telephone while it is deactivated.
Additional telephone
A mobile phone can be used as an additional telephone.
The additional telephone can be used to accept incoming calls, refer to page 193. While a call is active on the additional telephone, received calls are displayed on the Control Display.

Office
Contacts, appointments, tasks, notes, text messages, and e-mails from the mobile phone are transferred to the vehicle.

Bluetooth audio
A mobile phone can be used as an audio source.
"Bluetooth® audio"
To use a mobile phone in the vehicle as a telephone only, deactivate the function and reconnect the mobile phone.

Pairing and connecting a mobile phone

Pairing the mobile phone
To avoid becoming distracted and posing an unnecessary hazard both to your own vehicle’s occupants and to other road users, only pair the mobile phone while the vehicle is stationary. ◄

1. "Telephone"
2. "Bluetooth® (phone)"
3. "Add new phone"
   The Bluetooth name of the vehicle is displayed.
4. To perform additional steps on the mobile phone, refer to the mobile phone operating instructions: for instance, search for or connect the Bluetooth device or a new device. The Bluetooth name of the vehicle appears on the mobile phone display.
5. Select the Bluetooth name of the vehicle on the mobile phone display.
6. You are prompted by the onboard monitor or mobile phone to enter the same Bluetooth passkey.
Enter the passkey and confirm.
or
   Compare the control number on the vehicle display with the control number on the mobile phone display. Confirm the control number on the mobile phone and in the vehicle.
"OK"
7. Select the functions for which the mobile phone is to be used.
8. "OK"
9. Move the MINI joystick to the left.
If the pairing was successful, the mobile phone appears at the top of the list of mobile phones. The functions supported by the mobile phone and audio device are displayed as symbols when paired.

White symbol: the function is active.
Gray symbol: the function is inactive.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>☑️</td>
<td>Telephone.</td>
</tr>
<tr>
<td>☐️</td>
<td>Additional telephone.</td>
</tr>
<tr>
<td>🎸</td>
<td>Audio source.</td>
</tr>
</tbody>
</table>

Four mobile phones can be paired with the vehicle at once. Three mobile phones can be connected with the vehicle at once.

If pairing was unsuccessful: What to do if..., refer to page 192.

**Following the initial pairing**

- The mobile phone is detected/connected in the vehicle within a short period of time when the engine is running or the ignition is switched on.
- The phone book entries of the telephone stored on the SIM card or mobile phone are transmitted to the vehicle after detection, depending on the mobile phone.
- Specific settings may be necessary in some mobile phones, e.g., authorization or a secure connection; refer to the mobile phone operating instructions.

**Connecting a particular mobile phone**

1. "Telephone"
2. "Bluetooth® (phone)"
   - All paired mobile phones are listed.
3. Select the mobile phone that is to be connected.

The functions assigned to the mobile phone before unpairing are assigned to the mobile phone when it is reconnected. These functions are deactivated in a mobile phone that is already connected.

**Device options**

Device options can be activated or deactivated for paired and connected devices.

**Configuring the mobile phone**

Additional functions can be activated or deactivated for paired and connected mobile phones.

1. "Telephone"
2. "Bluetooth® (phone)"
3. Highlight the mobile phone to be configured.
4. Open "Options".
5. "Configure phone"
6. At least one function must be selected.
   - "Telephone"
"Additional telephone"
"Audio"

7. "OK"

If a function has already been assigned to another connected mobile phone, the function is deactivated in that mobile phone and the mobile phone is unpaired when the function is assigned to a new mobile phone.

Swapping the telephone and additional telephone

If a phone and additional phone are connected to the vehicle, the function can be swapped between the two devices.

1. "Telephone"
2. "Bluetooth® (phone)"
3. "Swap phone/addit. phone"

Using a mobile phone as an audio source

An audio-capable mobile phone can be used as an audio source. Activate Bluetooth audio, refer to page 190.

Pair the mobile phone with the vehicle and connect it, refer to page 190.

The mobile phone is used as the audio source, provided that another device has not been connected as the audio source.

If another device has already been connected as the audio source:

1. Pair the mobile phone with the vehicle and connect it, refer to page 190.
2. "Use for audio"

The mobile phone is connected as an audio source. The previous audio source is no longer connected to the vehicle.

Unpairing a device

1. "Telephone"
2. "Bluetooth® (phone)"

All paired devices are listed.

3. Highlight the device that is to be unpaired.
4. Open "Options".
5. "Remove phone from list"

What to do if...

Information on suitable mobile phones, refer to page 188.

The mobile phone could not be paired or connected.

▷ Is Bluetooth activated in the vehicle and on the mobile phone? Activate Bluetooth in the vehicle and on the mobile phone.

▷ Do the Bluetooth passkeys on the mobile phone and the vehicle match? Enter the same passkey on the mobile phone and via the onboard monitor.

▷ A multi-character passkey may be needed.

▷ Did it take longer than 30 seconds to enter the passkey? Repeat the pairing procedure.

▷ Are too many Bluetooth devices connected to the mobile phone or vehicle? Delete connections with other devices if necessary.

▷ Is the audio connection activated? Deactivate the audio connection.

▷ Is the mobile phone in power-save mode or does it have only a limited remaining battery life? Charge the mobile phone in the snap-in adapter or via the charging cable.

▷ Depending on the mobile phone, it is possible that only one mobile phone can be connected to the vehicle. Unpair the connected mobile phone from the vehicle and pair and connect only one mobile phone.
The mobile phone no longer reacts.
▷ Switch the mobile phone off and on again.
▷ Is the ambient temperature too high or low? Do not expose the mobile phone to extreme environmental conditions.

The telephone functions are not available.
▷ Is the mobile phone paired as an additional telephone and is the additional telephone function deactivated? Activate the function.
▷ Is an outgoing call not possible? Connect the mobile phone as a telephone.

No phone book entries or only some phone book entries are displayed, or they are incomplete.
▷ Transmission of the phone book entries is not yet complete.
▷ It is possible that only the phone book entries of the mobile phone or the SIM card are transmitted.
▷ It may not be possible to display phone book entries with special characters.
▷ The number of phone book entries to be stored is too high.
▷ Is the data volume of the contact too large, e.g., due to stored information such as notes? Reduce the data volume of the contact.
▷ Is the mobile phone connected as an audio source or additional telephone? The mobile phone must be connected as a telephone.

The phone connection quality is poor.
▷ The strength of the Bluetooth signal on the mobile phone can be adjusted, depending on the mobile phone.
▷ Insert the mobile phone into the snap-in adapter or place it in the area of the center console.
▷ Adjust the volume of the microphone and loudspeakers separately.

If all points in this list have been checked and the required function is still not available, contact Customer Relations or the service center.

CONTROLS

Adjusting the volume

Turn the knob until the desired volume is selected. The setting is stored for the remote control currently in use.

The vehicle automatically adjusts the volume of the microphone on the telephone and the volume of the called party. Depending on the mobile phone, the volumes may need to be adjusted.

The settings can only be created during a call and must be adjusted separately for each telephone. The settings are deleted when the telephone is unpaired.

1. "Settings"
2. "Tone"
3. "Volume settings"
4. Select the desired setting: "Microphone" or "Loudspeaker."
5. To set: turn the MINI joystick.
6. To save: press the MINI joystick.

Incoming call

Receiving calls

If the number of the caller is stored in the phone book and is transmitted by the network, the name of the contact is displayed. Otherwise, only the phone number is displayed.
If more than one phone number is assigned to a contact, only the name of the contact is displayed.

For calls on the additional telephone, the number is only displayed if it is transmitted by the network.

An incoming call to one of the telephones is automatically rejected if there is an active call on the other telephone.

**Accepting a call**

Press the button on the steering wheel.

or

"Accept"

**Rejecting a call**

"Reject"

The caller is redirected to the mailbox if the mailbox was activated

**Ending a call**

Press the button on the steering wheel.

or

1. "Telephone"

2. "End call"

![Image of End call screen]

**Entering a phone number**

**Dialing a number**

1. "Telephone"

2. "Dial number"

3. Select the digits individually.

4. Select the symbol.

The phone number can also be entered by voice.

**Calls with multiple parties**

**General information**

You can switch between calls or connect two calls to a single conference call. These functions must be supported by the mobile phone and service provider.

**Accepting a call while speaking to another party**

This function might have to be activated by the service provider and the mobile phone must be adjusted accordingly.
If a second call comes in during an ongoing call, a call waiting signal is sounded.

接受
The call is accepted and the existing call is put on hold.

Establishing a second call
Establish an additional call during an active call.

1. "Telephone"
2. "Active calls"
3. "Hold"
   The existing call is put on hold.
4. Dial the new phone number or select it from a list.
   "Return"
   The call on hold is resumed.

Switching between two calls, hold call
Active call: highlighted.
Call on hold identified by: "on hold...".

Select the symbol to change to the call on hold.

Establishing a conference call
Two calls can be connected to a single telephone conference call.

1. Establish two calls.
2. "Conference call"

When terminating a conference call, both calls are ended. If one call is terminated by another party, the other call can be continued.

Switching the microphone to mute
When a call is active, the microphone can be muted.

1. "Telephone"
2. "Active calls"
3. "Microphone mute"

A microphone that has been switched to mute is automatically reactivated:
▷ When a new connection is established.
▷ When switching between call parties.

DTMF suffix dialing
DTMF suffix dialing can be used for gaining access to network services or for controlling devices, e.g., to make a remote inquiry of an an-
swering machine. The DTMF code is needed for this purpose.

1. "Telephone"
2. Select the contact from a list or "Dial number".
3. "Keypad dialing"

4. Enter the DTMF code on the onboard monitor.

DTMF suffix dialing is not possible during conference calls.

**Phone book**

**Displays**

The phone book accesses the contacts and shows all contacts for which a phone number has been stored. The entries can be selected to make a call.

1. "Telephone"
2. "Phone book"

A symbol indicates the storage location of the contacts.

<table>
<thead>

<td>Call not possible; mobile phone without reception or network.</td>
</tr>
</tbody>
</table>

**Calling a contact**

For contacts with one stored phone number: select the required contact. The connection is being established.

For contacts with more than one stored phone number: select the required contact and the phone number. The connection is being established.

**Editing a contact**

Changing the entries in "Contacts". When a contact is changed, the changes are not stored on the mobile phone. A copy of the entry is stored in the vehicle.

1. Highlight the contact.
2. Open "Options".
3. "Edit entry"

The contact can be edited.

**Redialing**

**General information**

The list of dialed numbers in the mobile phone is transmitted to the vehicle depending on the mobile phone. Possibly only those numbers are displayed that were dialed from the vehicle.

The 20 phone numbers dialed last are displayed. The sorting order of the phone numbers depends on the particular mobile phone.
Dialing a number on the onboard monitor
1. "Telephone"
2. "Redial"
3. Select the desired entry and the phone number if necessary.
The connection is established.

Deleting a single entry or all entries
The deletion of entries depends on your particular mobile phone.
1. Highlight the entry.
2. Open "Options".
3. "Delete entry" or "Delete list"

Saving an entry in the contacts
1. Highlight the entry.
2. Open "Options".
3. "Store as new contact" or "Add to existing contact"
4. Select the contact if necessary.
5. Select the type of number: "Home", "Business", "Mobile" or "Other"
6. Complete the entries if necessary.
7. "Store contact"

Received calls

Displaying calls
The list of received calls on the mobile phone is transmitted to the vehicle, depending on the particular mobile phone. It is possible that only those calls are displayed that were received in the vehicle.
The 20 telephone calls that were last received are displayed. The sorting order and display of the phone numbers depends on the particular mobile phone.
1. "Telephone"
2. "Received calls"
3. Selecting an entry.
The connection is established.

Deleting a single entry or all entries
The deletion of entries depends on your particular mobile phone.
1. Highlight the entry.
2. Open "Options".
3. "Delete entry" or "Delete list"

Saving an entry in the contacts
1. Highlight the entry.
2. Open "Options".
3. "Store as new contact" or "Add to existing contact"
4. Select the contact if necessary.
5. Select the type of number: "Home", "Business", "Mobile" or "Other"
6. Complete the entries if necessary.
7. "Store contact"
SNAP-IN ADAPTER

General information
More information on compatible snap-in adapters that support the functions of the mobile phone is available at the service center.

Notes
At high temperatures, the charging function of the mobile phone may be limited and functions may not be executed.
When using the mobile phone via the vehicle, note the operating instructions of the mobile phone.

Installation position
In the center armrest.

Inserting/removing the snap-in adapter
1. Press the button, arrow 1, and remove the cover, arrow 2.
2. Insert the snap-in adapter at the front, arrow 1, and press down, arrow 2, until it engages.

To remove:
To remove the snap-in adapter, press the button.

Inserting the mobile phone
1. Depending on the mobile phone, remove the protective cap from the antenna connector and from the USB connection of the mobile phone.
2. With the buttons facing up, slide the mobile phone up toward the electrical contacts, arrow 1, and press it down until it engages, arrow 2.

The battery is charged beginning with the radio ready state of the vehicle.

Removing the mobile phone

Press the button, arrow 1, and remove the mobile phone, arrow 2.
OFFICE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AT A GLANCE

General information

Contacts, appointments, tasks, notes, text messages, and e-mails from the mobile phone can be displayed on the Control Display if the mobile phone provides compatible support of these functions and the necessary Bluetooth standards.

Information about which mobile phones and functions are available can be found at www.mini.com/connectivity.

Contents are only displayed in full length when the vehicle is stationary.

The mobile phone has read-access only.

⚠️ Do not use Office while driving

To avoid becoming distracted and posing an unnecessary hazard to your vehicle’s occupants and to other road users, never attempt to use the controls or enter information unless traffic and road conditions allow this.

Requirements

➢ A suitable mobile phone is paired with the vehicle and connected. In some mobile phones, data access must be confirmed on the mobile phone.

➢ The time, time zone, and date, refer to page 71, are correctly set on the Control Display and on the mobile phone, for instance to correctly display appointments.

Updating

Data are updated every time the mobile phone is connected to the vehicle. Appointment entries, tasks, notes and reminders can be updated separately.

1. "Office"
2. "Current office", "Calendar", "Tasks", "Notes" or "Reminders"
3. Open "Options".
4. "Update data"
   Mobile phone data are transmitted again to the vehicle.

OFFICE INFORMATION

The number of unread messages and active tasks as well as the upcoming appointments are displayed.

1. "Office"
2. "Current office"
3. Select the desired entry to display details.
CONTACTS

At a glance
Contacts can be created and edited. The contacts from the mobile phone are displayed as well if this function is supported by the mobile phone.

The addresses can be adopted as destinations for navigation and the phone numbers can be dialed.

Displaying contacts

General information

1. "Office"
2. "Contacts"

All contacts are listed in alphabetical order. Depending on the number of contacts, an A-Z search is offered.

A symbol indicates the storage location of the contacts.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Storage location</th>
</tr>
</thead>
<tbody>
<tr>
<td>No symbol</td>
<td>In the vehicle; the address has not been checked as a destination.</td>
</tr>
<tr>
<td></td>
<td>In the vehicle; the address has been checked as a destination.</td>
</tr>
<tr>
<td></td>
<td>Mobile phone.</td>
</tr>
</tbody>
</table>

Dialing a phone number

1. Select the desired contact.
2. Select the phone number.

The connection is established.

Editing a contact

1. Select the desired contact.
2. "Edit contact"
3. Change the entries.
4. "Store contact in vehicle"

When a contact is edited, the changes are not stored on the mobile phone. A copy of the entry is stored in the vehicle.

Selecting the contact as a navigation destination

1. Select the desired contact.
2. Select the address.

When contacts from the mobile phone are used, the address may need to be matched to the navigation data contained in the vehicle. In this case:

Correct the address.

3. "Start guidance" or "Add as another destination"
Checking the address as a destination
An address that is to be used for destination guidance must match the navigation data contained in the vehicle. The address can be checked for this purpose.

1. Select the desired contact and highlight the address.
2. Open "Options".
3. "Check as destination"
4. Correct and store the address if necessary.

If the address is corrected and stored, a copy of it is stored in the vehicle. The address is not changed on the mobile phone.

New contact

General information
A contact can have up to 8 phone numbers, 2 addresses, 3 e-mail addresses and one Internet address.

1. "Office"
2. "Contacts"
3. Open "Options".
4. "New contact"

5. The entry fields are still filled with the previous entries: "Delete input fields"
6. Fill in the entry fields: select the symbol next to the entry field.
7. Enter the text and assign the contact type.
8. If the vehicle is equipped with a navigation system: enter the address. Only addresses contained in the navigation data in the vehicle can be entered. This ensures that destination guidance is possible for all addresses.
9. "Store contact in vehicle"

Contact types
Various contact types can be assigned to phone numbers and addresses.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>🏡</td>
<td>Home phone number.</td>
</tr>
<tr>
<td>🏢</td>
<td>Business phone number.</td>
</tr>
<tr>
<td>📞</td>
<td>Mobile phone number.</td>
</tr>
<tr>
<td>📞</td>
<td>Other phone number.</td>
</tr>
<tr>
<td>🏡</td>
<td>Home address.</td>
</tr>
<tr>
<td>🏢</td>
<td>Business address.</td>
</tr>
</tbody>
</table>

Specifying the home address
A home address can be stored. It appears at the top of the contact list.

1. "Office"
2. "Contacts"
3. "Home"
4. Create a contact.
5. "Store contact in vehicle"

Selecting the sorting order of the names
Names can be displayed in a different order.

1. "Office"
2. "Contacts"
3. Open "Options".
4. "Display: last, first name" or "Display: first, last name"

Depending on how the contacts were stored on the mobile phone, the sorting order of the
names may differ from the selected sorting order.

Show contact pictures
Pictures stored with the contacts are stored in the vehicle when the mobile phone is connected to the vehicle. The number of transmitted pictures depends on the mobile phone. The mobile phone must support this function.

1. "Office"
2. "Contacts"
3. Open "Options".
4. "Configure Bluetooth®"
5. "Show images"
Display of all contact pictures is activated or deactivated.

Deleting contacts
Only contacts that are stored in the vehicle are deleted. The contacts on the mobile phone cannot be deleted.

1. "Office"
2. "Contacts"
3. Highlight the contact.
4. Open "Options".
5. "Delete contact" or "Delete all contacts"

MESSAGES

General information
Whether or not text messages and e-mails from the mobile phone are displayed depends on whether transmission from the mobile phone to the vehicle is supported. Text messages and e-mails may not be supported by the service provider, or the function may need to be enabled separately. After the mobile phone is first paired, transmission may take several minutes. Messages are only displayed in full length when the vehicle is stationary. Messages from the additional telephone are not transmitted.

Displaying messages
1. "Office"
2. "Messages"
A symbol identifies the type of message.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Message type</th>
</tr>
</thead>
<tbody>
<tr>
<td>📬</td>
<td>Text messages.</td>
</tr>
<tr>
<td>💌</td>
<td>E-mail from mobile phone.</td>
</tr>
</tbody>
</table>

Filtering the message list
The message list can be filtered if more than one type of message exists.

1. "Filter:"
2. Select the type of message.
   ▷ "All"
   All messages are displayed.
   ▷ "Text message"
   Only text messages from the mobile phone are displayed.
   ▷ "E-mail"
   Only e-mails from the mobile phone are displayed.

Text messages

Calling the sender of a text message
1. Select the desired message.
2. ✆ Select the symbol.

Saving the sender in the contacts
1. Highlight the desired message.
2. Open "Options".
3. "Store as new contact" or "Add to existing contact"
Using contact data
Contact data from appointments, tasks, text messages, e-mails, and notes can be stored or selected, refer to page 205.

Reading the text message out loud
Read the text message out loud, refer to page 205.

E-mail

Displaying e-mails
1. "Office"
2. "Messages"
3. Select the desired e-mail.

Displaying e-mail contacts
If the sender and recipient of an e-mail are transmitted by the mobile phone, this information is displayed in the e-mail.

- "Sender/Recipient"
If the e-mail addresses are stored in the contacts, the contact is displayed. Select the contact to display details.
If the e-mail addresses are not stored in the contacts, only the e-mail address is displayed.

Using contact data
Contact data from appointments, tasks, text messages, e-mails, and notes can be stored or selected, refer to page 205.

Deactivating the full display
When an e-mail is opened in the vehicle, the e-mail is fully transmitted to the vehicle. This may result in charges.

1. "Office"
2. "Messages"
3. Open "Options".
4. "Fully download e-mails"
   Only a part of the e-mail from the mobile phone is loaded into the vehicle.

Reading the e-mail out loud
Read the e-mail out loud, refer to page 205.

CALENDAR

Display the calendar
Appointments during the last 20 days and the next 50 days can be displayed.

1. "Office"
2. "Calendar"
   The appointments on the current day are displayed.

Selecting the calendar day
1. Select the date.

2. Select the desired day or date.
   - "Next day"
   - "Date:"
   - "Previous day"
   - "Today"

Display the appointment
1. Select the desired appointment.
2. Scroll through the appointment if necessary:
   - Turn the MINI joystick.
   - Select the symbol.
Using contact data
Contact data from appointments, tasks, text messages, e-mails, and notes can be stored or selected, refer to page 205.

Reading the appointment out loud
Read the appointment out loud, refer to page 205.

TASKS

Displaying the task list
Display tasks that are due within the next 90 days.

1. "Office"
2. "Tasks"

Sorting the task list
1. Select the header in the task list.
2. Select the sorting criterion:
   - "Priority (!)"
   - "Subject"
   - "Due date"

Displaying the task
1. Select the desired task.
2. Scroll in the task if necessary:
   - Turn the MINI joystick.
   - Select the symbol.

NOTES

Displaying notes
1. "Office"
2. "Notes"
   All notes are displayed.

Displaying the note
1. Select the desired note.
2. Scroll in the note if necessary:
   - Turn the MINI joystick.
   - Select the symbol.

Using contact data
Contact data from appointments, tasks, text messages, e-mails, and notes can be stored or selected, refer to page 205.

Reading the note out loud
Read the note out loud, refer to page 205.
REMINDERS

Displaying reminders
Reminders of pending appointments and tasks are displayed. After an appointment or after a task is due, the reminder is no longer displayed.
1. "Office"
2. "Reminders"
3. Select the desired reminder.
The corresponding appointment or the task are displayed.

USING CONTACT DATA

At a glance
Contact data from appointments, tasks, text messages, e-mails, and notes can be stored or selected.

Displaying contact or selecting phone number
1. 📞 "Use contact data"
2. Display the contact or select the phone number:
   ▶ Select the contact to display contact details.
   ▶ Select the phone number to establish a connection directly.

Storing contact data
1. 📞 "Use contact data"
2. Highlight the phone number or e-mail address.
3. Open "Options".
4. "Add to existing contact" or "Store as new contact"

READING OUT LOUD

Text messages, e-mails, appointment entries, tasks, and notes can be read out loud.
1. Select the desired message, appointment, task, or note.
2. ▶ Select the symbol.
The following options are available during reading:
   ▶ ⏯ "Pause"
   Interrupt reading. Select again to restart reading.
   ▶ ⏯ "Back to beginning"
   Start reading the message again from the beginning.
   ▶ ☐ Select the symbol.
   Go back one paragraph.
   ▶ ▶ Select the symbol.
   Skip a paragraph.
   ▶ To end reading, move the MINI joystick to the left.

WHAT TO DO IF...

Information on suitable mobile phones, refer to page 188.
Appointments, tasks, notes, text messages, or e-mails from the mobile phone are not displayed.
The mobile phone is not capable of the missing function or is not connected correctly.

The Office function is deactivated.

The mobile phone is connected as an additional phone.

Appointments are older than 20 days or are more than 50 days in the future.

The tasks have been marked as completed or have a due date that lies more than 90 days in the future.

Depending on the number of stored appointments, task notes, and messages in the mobile phone, not all are displayed in the vehicle.

Not all appointments and tasks from the mobile phone are displayed at the right time?

The time zone, time, or date is incorrectly set on the Control Display and mobile phone.

Entries are not displayed in full length.

Text were already transmitted from the mobile phone in a shortened form.

Synchronization between the mobile phone and vehicle may take several minutes.

The contact pictures are not being displayed?

Up to 200 contact pictures can be stored in the vehicle.

If all points in this list have been checked and the required function is still not available, please contact the hotline or service center.
MINI CONNECTED

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

AT A GLANCE

The concept
Certain software applications of a suitable mobile phone can be integrated in the vehicle. These software applications are displayed on the Control Display.

They are operated via the onboard monitor. The scope of the software applications may vary by country.

Requirements
▷ The mobile phone is suitable.
▷ The mobile phone operating system supports the software applications of MINI Connected.
▷ Software applications are installed on the mobile phone and ready to use.
▷ Corresponding mobile wireless contract. Any additionally incurred costs are not a part of MINI Connected.

Software applications
Use only software applications approved by the manufacturer of your MINI; otherwise, malfunctions may occur.

CONNECTING THE MOBILE PHONE

Connection via the USB audio interface
The USB audio interface is in the center console. Connect the mobile phone to the USB interface and the AV-IN port using a special adapter cable available from the service center.

To perform additional steps on the mobile phone, refer to the mobile phone operating instructions: for instance, selecting and activating software applications.

Connection via the snap-in adapter
The mobile phone can also be connected, refer to page 198, via the snap-in adapter.

OPERATING MINI CONNECTED

After the mobile phone is successfully connected with the vehicle and MINI Connected is started, the applications are displayed on the
Control Display and can be operated using the MINI joystick.

The volume can be set using the following controls:

▷ Buttons on the steering wheel or
▷ Volume button on the radio, refer to page 156.

1. Connect the mobile phone via the snap-in adapter or via the USB audio interface.

2. Press the button. The main menu is opened.

3. "MINI Connected"

4. Select the desired software application.

**Notes**

▷ The scope of MINI Connected that can be displayed on the Control Display depends on the range of software applications installed on the mobile phone.

▷ The data transmission of the software applications from the mobile phone to the vehicle can last some time. Some software applications depend on the speed of the available Internet connection of the mobile phone.

▷ Some mobile phones cannot simultaneously use MINI Connected and the Bluetooth hands-free system.

If necessary, restart the software application on the mobile phone after a phone conversation.

▷ Audio and video playback from the snap-in adapter is only possible if no cable is connected to the AV-IN port.

**PLUGIN**

**The concept**

Selected functions of a compatible Apple device can be displayed on the Control Display via a video connection. They are operated using the MINI joystick and the button on the MINI joystick.

**Functional requirement**

▷ Suitable iPhone or iPod: as of iPhone 3GS or iPod with software version iOS 4.1 and higher.

▷ The MINI Connected app is not required.

Information on compatible adapters and interfaces can be obtained from the service center.

**Activating**

1. Connect the Apple device.

   Operation takes place via the MINI joystick with its buttons.

2. "MINI Connected"

3. "PlugIn"

4. Select the connection type: "Activate via AUX connection" or "Activate via Snap-In adapter"

5. "Activate PlugIn"

6. Use the MINI joystick to navigate among the displayed functions and select, for example, a desired category or track.

**Controls**

The PlugIn is activated to display the graphic output of the connected device on the Control
Display. This changes the operating functions of the MINI joystick and the MINI buttons until the PlugIn is deactivated again.

The operation of the PlugIn depends on the iOS version in use, e.g., iOS 4.1.

**Home button**
- Press the button to select the following functions:
  - Press 1x: opens the display menu bar.
  - Press 2x: opens the main menu.
  - Press 1x and move the MINI joystick to the left 1x: opens the MINI Connected menu.
  - Press 1x and move the MINI joystick to the left 2x: opens the main menu.

**Toggle button**
- Press the button to select the following functions.
  - Press 1x: return to the next higher menu level of the iPhones/iPods.

**MINI joystick**
- Turn: navigate through the lists.
- Move to the left: jump to the beginning of the current music track or to the previous music track in the playback list.
- Move the left and hold: reverse.
- Move to the right: jump to the next music track in the playback list.
- Move to the right and hold: fast forward.

**Deactivating**
There are several methods of deactivating the PlugIn and returning to the MINI operating level.

**Via the home button**
- Press 1x: returns to activating the PlugIn.
- Press 2x: opens the main menu.
- Press 1x and move the MINI joystick to the left 1x: opens the MINI Connected menu.
- Press 1x and move the MINI joystick to the left 2x. Opens the main menu.

**Via the audio source button**
- Press 1x: changes to the audio source selected last.
REFUELING

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

GENERAL INFORMATION

⚠️ Refuel promptly
At the latest, refuel at a range below 30 miles/50 km; otherwise, the engine function is not ensured and damage may occur.

NOTES

⚠️ Switch off the engine before refueling
Always switch off the engine before refueling; otherwise, fuel cannot be added to the tank and a message will be displayed.

⚠️ Observe when handling fuel
- Take all precautionary measures and observe all applicable regulations when handling fuel.
- Do not carry any spare fuel containers in your vehicle. They can develop a leak and cause an explosion or cause a fire in the event of an accident.

FUEL CAP

Opening
1. Open fuel filler flap.
2. Turn the fuel cap counterclockwise.
3. Place the fuel cap in the bracket attached to the fuel filler flap.

Closing
1. Fit the fuel cap and turn it clockwise until you clearly hear a click.
2. Close the fuel filler flap.

⚠️ Do not pinch the retaining strap
Do not pinch the retaining strap attached to the cap; otherwise, the cap cannot be closed properly and fuel vapors can escape.

A message is displayed if the cap is loose or missing.

Manually unlocking fuel filler flap
In the event of a malfunction, the fuel filler flap can be released manually:
MINI Countryman:
MINI Paceman:

1. Open the cargo area trim, arrow.
2. Pull the green knob with the gas pump symbol.
   This opens the fuel filler flap.

FUEL TANK CAPACITY

Approx. 12.3 US gal/47 liters, including a reserve capacity of 2.1 US gal/8 liters.

OBSERVE THE FOLLOWING WHEN REFUELING

When refueling, insert the filler nozzle completely into the filler pipe. Lifting up the fuel pump nozzle during refueling causes:

- Premature pump shutoff.
- Reduced efficiency in the fuel-vapor recovery system.

The fuel tank is full after refueling is resumed twice after the filler nozzle switches off for the first time.

Do not overfill the fuel tank

Do not overfill the fuel tank; otherwise, escaping fuel may harm the environment or damage the vehicle.

Handling fuels

Follow the safety instructions provided at gas stations; otherwise, there is a danger of personal injury and property damage.

Fuel tank capacity

Approx. 12.3 US gal/47 liters, including a reserve capacity of 2.1 US gal/8 liters.
FUEL RECOMMENDATION

Vehicle equipment
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

Gasoline
For the best fuel economy, the gasoline should be sulfur-free or very low in sulfur content.

Do not use fuels that are labeled at the fuel pump as containing metals.

Only refuel with lead-free gasoline without metal additives

Do not refuel with leaded gasoline or gasoline with metal additives, e.g., manganese or iron; otherwise, the catalytic converter and other components will be permanently damaged.

Fuels with a maximum ethanol content of 10 %, i.e., E10, may be used for refueling.

The ethanol should fulfill the following quality standards:

US: ASTM 4806–xx
CAN: CGSB-3.511–xx
xx: always adhere to the currently applicable standard.

Do not refuel with ethanol E85

Do not refuel with E85, i.e., fuel with an ethanol content of 85 %, or with Flex Fuel, as this would damage the engine and fuel supply system.

The engine is knock controlled. Therefore, you can refuel with different recommended fuel grades.

Recommended fuel grade
The manufacturer of your MINI recommends:

AKI 91.
John Cooper Works AKI 93.

Minimum fuel grade
The manufacturer of your MINI recommends AKI 89.

Do not fill up with fuel below the specified minimum quality; otherwise, the engine may not run properly.

If you use gasoline with this minimum AKI rating, the engine may produce knocking sounds when starting at high outside temperatures. This has no effect on the engine life.

The use of poor-quality fuels may result in harmful engine deposits or damage. Additionally, problems relating to drivability, starting and stalling, especially under certain environmental conditions such as high ambient temperature and high altitude, may occur.

If drivability problems are encountered, we recommend switching to a high quality gasoline brand and a higher octane grade — AKI number — for a few tank fills. To avoid harmful engine deposits, it is highly recommended to purchase gasoline from BP or Top Tier retailers.

Failure to comply with these recommendations may result in the need for unscheduled maintenance.
MINI recommends BP fuels
WHEELS AND TIRES

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

TIRE INFLATION PRESSURE

Safety information

It is not merely the tires' service life, but also driving comfort and, to a great extent, driving safety that depend on the condition of the tires and the maintenance of the specified tire pressure.

Checking the pressure

Tires naturally lose pressure uniformly across all four tires.

Check the tire inflation pressure regularly

Regularly check the tire inflation pressure and correct it as needed: at least twice a month and before a long trip. If you fail to observe this precaution, you may be driving on tires with incorrect tire pressures, a condition that may not only compromise your vehicle's driving stability, but also lead to tire damage and the risk of an accident.

Do not drive with depressurized or flat tires, except for run-flat tires. A flat tire will seriously impair your vehicle's handling and braking response. Attempts to drive on a flat tire can lead to a loss of control over the vehicle. ▶

Tires warm up during driving and the tire inflation pressure increases as the temperature rises. The tire inflation pressure specifications apply to cold tires or tires at ambient temperature.

Only check the tire inflation pressure when the tires are cold. This means after a maximum of 1.25 miles/2 km driving or when the vehicle has been parked for at least 2 hours. When the tires are warm, the tire inflation pressure is higher.

After correcting the tire inflation pressure, reset the Tire Pressure Monitor, refer to page 87 or reinitialize the Flat Tire Monitor, refer to page 85.

Pressure specifications

The tables below provide all the correct inflation pressures for the specified tire sizes at ambient temperature.

The inflation pressures apply to the tire sizes approved and tire brands recommended by the manufacturer of the MINI; a list of these is available from the service center.

For correct identification of the right tire inflation pressures, observe the following:

▷ Tire sizes of your vehicle
▷ Maximum allowable driving speed

Tire inflation pressures for driving up to 100 mph or 160 km/h

For normal driving up to 100 mph/160 km/h, adjust pressures to the respective tire inflation pressures listed on the following pages in the column for traveling speeds up to 100 mph/160 km/h to achieve optimum driving comfort.

These tire inflation pressures can also be found on the driver's side door pillar when the driver's door is open.
MINI Countryman:

Do not exceed the maximum permissible speed

The permissible maximum speed for these tire inflation pressures is 100 mph/160 km/h. Do not exceed this speed or else there is a risk of tire damage and accidents.

Tire inflation pressures for driving above 100 mph or 160 km/h

Adjust the tire inflation pressures

To drive at maximum speeds in excess of 100 mph/160 km/h, adjust pressures to the respective tire inflation pressures listed on the following pages in the column for traveling speeds including those exceeding 100 mph or 160 km/h. Otherwise, tire damage and accidents could occur.

Observe all national and local maximum speed limits; otherwise, violations of the laws could occur.

Tire inflation pressures for MINI Countryman Cooper

TIRE IDENTIFICATION MARKS

Knowledge of the labeling on the side of the tire makes it easier to identify and choose the right tires.

**Tire size**
Example: 225/45 R 17 91 V
225: nominal width in mm
45: aspect ratio in %
R: radial tire code
17: rim diameter in inches
91: load rating, not for ZR tires

**Speed letter**
Q = up to 100 mph/160 km/h
T = up to 118 mph/190 km/h
H = up to 131 mph/210 km/h
V = up to 150 mph/240 km/h
W = up to 167 mph/270 km/h
Y = up to 186 mph/300 km/h

Tire Identification Number
Tires with DOT codes meet the guidelines of the U.S. Department of Transportation.
DOT code:
DOT xxxx xxx 2214
xxxx: manufacturer code for the tire brand
xxx: tire size and tire design
2214: tire age

Uniform Tire Quality Grading
Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example:
Treadwear 200 Traction AA
Temperature A

DOT Quality Grades
Treadwear
Traction AA A B C
Temperature A B C
Treadwear
The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and one-half (1 1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction
The traction grades, from highest to lowest, are AA, A, B, and C.

Those grades represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance. The traction grade assigned to this tire is based on straight-ahead braking traction tests, and does not include acceleration, cornering, hydroplaning, or peak traction characteristics.

Temperature
The temperature grades are A, the highest, B, and C, representing the tire's resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No. 109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Temperature grade for this tire
The temperature grade for this tire is established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

RSC – Run-flat tires
The symbol identifying run-flat tires is a circle with the letters RSC on the sidewall, refer to page 224.

M+S
Winter and all-season tires. These have better winter properties than summer tires.

XL
Designation for specially reinforced tires.

TIRE TREAD

Summer tires
The tread depth should not be less than 0.12 in/3 mm, although European legislation, for example, requires a minimum tread depth of only 0.063 in/1.6 mm. At tread depths less than 0.12 in/3 mm, there is a great danger of hydroplaning even in low water depths and at raised speeds.

Winter tires
The suitability of winter tires for winter driving is reduced noticeably when their tread depth becomes less than 0.16 in/4 mm.
Minimum tread depth

Wear indicators in the tread base are distributed around the circumference of the tire and are marked on the tire sidewall with TWI, Tread Wear Indicator. When the tire tread has been worn down to the wear indicators, a tread has reached a depth of 0.063 in/1.6 mm.

TIRE DAMAGE

General information
Inspect your tires often for damage, foreign objects lodged in the tread, and tread wear.

Notes
Driving over rough or damaged road surfaces, as well as debris, curbs and other obstacles can cause serious damage to wheels, tires and suspension parts. This is more likely to occur with low-profile tires, which provide less cushioning between the wheel and the road. Be careful to avoid road hazards and reduce your speed, especially if your vehicle is equipped with low-profile tires.

Indications of tire damage or other vehicle defects:
▷ Unusual vibrations during driving.
▷ Unusual handling such as a strong tendency to pull to the left or right.

Damage can be caused by driving over curbs, road damage and similar situations.

In case of tire damage
If there are indications of tire damage, reduce your speed immediately and have the wheels and tires checked right away; otherwise, there is the increased risk of an accident. Drive carefully to the next service center or tire shop.

If necessary, have the vehicle towed.
Otherwise, tire damage can present a life-threatening hazard to vehicle occupants and other road users.

Repair of tire damage
For safety reasons, the manufacturer of your vehicle recommends that you do not have damaged tires repaired; they should be replaced. Otherwise, damage can occur as a result.

TIRE AGE

Recommendation
For several reasons, among other things because of beginning brittleness, the manufacturer of your MINI recommends mounting new tires at the latest after six years, regardless of the actual wear.

Manufacture date
The date of manufacture of the tires is specified in the tire label:
DOT ... 0315: the tire was manufactured in the 3rd week of 2015.
CHANGING WHEELS AND TIRES

Mounting

⚠️ Information on mounting tires

Have mounting and balancing performed only by a service center or tire specialist.

If this work is not carried out properly, there is the danger of subsequent damage and related safety hazards.

Wheel and tire combination

Information on the right wheel and tire combination and rim version for your vehicle can be obtained from the service center.

Incorrect wheel and tire combinations impair the function of a variety of systems such as ABS or DSC.

To maintain good handling and vehicle response, use only tires with a single tread configuration from a single manufacturer.

Following tire damage, have the original wheel and tire combination remounted on the vehicle as soon as possible.

⚠️ Approved wheels and tires

The manufacturer of your vehicle recommends that you use only wheels and tires that have been approved for your particular vehicle model.

For example, despite having the same official size ratings, variations can lead to body contact and with it, the risk of severe accidents.

The manufacturer of your vehicle cannot evaluate non-approved wheels and tires to determine if they are suited for use, and therefore cannot ensure the operating safety of the vehicle if they are mounted.

Wheels with electronics for TPM Tire Pressure Monitor

When mounting new tires or changing from summer to winter tires or vice versa, only use wheels with TPM electronics; otherwise, the Tire Pressure Monitor will not be able to detect a flat tire, refer to page 86. Your service center will be glad to advise you.

Recommended tire brands

For each tire size, the manufacturer of your vehicle recommends certain tire brands. These are indicated by the clearly visible marking on the tire sidewall.

With proper use, these tires meet the highest standards for safety and handling.

Retreaded tires

The manufacturer of your vehicle does not recommend the use of retreaded tires.

⚠️ Retreaded tires

Possibly substantial variations in the design and age of the tire casing structures can limit service life and have a negative impact on road safety.

Winter tires

The manufacturer of your vehicle recommends winter tires for winter roads or at temperatures below +45 °F/+7 °C.

Although so-called all-season M+S tires do provide better winter traction than summer tires, they do not provide the same level of performance as winter tires.
Maximum speed of winter tires
If the maximum speed of the vehicle is higher than the permissible speed for the winter tires, then display a corresponding sign in the field of vision. You can obtain this sign from the tire specialist or from your service center.

⚠️ Maximum speed for winter tires
Do not exceed the maximum speed for the winter tires; otherwise, tire damage and accidents can occur.

Run-flat tires
When mounting new tires or changing from summer to winter tires or vice versa, use run-flat tires for your own safety. Also, a compact wheel is not available in case of a flat tire. Your service center will be glad to advise you.

Rotating wheels between axles
Different wear patterns occur on the front and rear axles, depending on the individual conditions of use.
To ensure even wear on the tires, the wheels can be rotated between the axles. Your service center will be glad to advise you.
After changing the tires, check the tire inflation pressure and correct it if necessary.

Storage
Store wheels and tires in a cool, dry place with as little exposure to light as possible.
Always protect tires against all contact with oil, grease and fuels.
Do not exceed the maximum tire inflation pressure indicated on the side wall of the tire.

RUN-FLAT TIRES

Label
The symbol identifying run-flat tires is a circle with the letters RSC on the sidewall.
Run-flat tires are tires that support themselves for a limited period of time, and they may also come with special rims. The sidewall reinforcement ensures that the tire can continue to be used to a limited extent if it has lost pressure and even if it has become completely depressurized.
For continued driving in the event of a flat tire, refer to page 85.

CORRECTING A FLAT TIRE

⚠️ Safety measures in case of a breakdown
► Park the vehicle as far as possible from passing traffic and on solid ground. Switch on the hazard warning system.
► Let the steering wheel lock engage with the wheels in the straight-ahead position, set the parking brake, and engage first gear or reverse, or engage selector lever position P.
► Have all vehicle occupants get out of the vehicle and ensure that they remain outside the immediate area in a safe place, such as behind a guardrail.
If a warning triangle or portable hazard warning lamp is required, set it up on the roadside at an appropriate distance from the rear of the vehicle. Comply with all safety guidelines and regulations.

The procedure to correct a flat tire depends on the equipment in the vehicle:

- Run-flat tires, refer to page 224.
- MINI Mobility System, refer to page 225.

**MINI MOBILITY SYSTEM**

**Notes**

- Follow the instructions on using the Mobility System found on the compressor and sealant bottle.
- Use of the Mobility System may be ineffective if tire damage is greater than approx. 1/8 in/4 mm in size.
- Contact the nearest service center if the tire cannot be made drivable.
- If possible, do not remove foreign bodies that have penetrated the tire.
- Pull the speed limit sticker off the sealant bottle and apply it to the steering wheel.

**Sealant and compressor**

1. Sealant bottle and speed limit sticker
2. Filling hose
   - Note the use-by date on the sealant bottle.

---

**Using the Mobility System**

To repair a flat tire with the Mobility System, proceed as follows:

- Filling the tire with sealant
- Distributing the sealant
- Correcting the tire inflation pressure

**Filling the tire with sealant**

⚠️ Adhere to the specified sequence
- Adhere to the specified sequence of the steps; otherwise, sealant may escape under high pressure.⚠️

1. Shake the sealant bottle.
2. Pull the connection hose 6 fully out of the compressor housing and screw it onto the sealant bottle connection. Ensure that the connection hose is not kinked.
3. Insert the sealant bottle into the compressor housing in a vertical position.

4. Unscrew the dust cap off of the valve of the defective wheel and screw the filling hose 2 of the sealant bottle onto the valve.

5. Ensure that the compressor is switched off.

6. Insert connector 5 into the lighter socket/socket in the passenger compartment, refer to page 110.

7. When the engine is running:
   - Switch on the compressor and let it run for approx. 3 to 8 minutes to fill sealant into the tire and achieve a tire inflation pressure of approx. 1.8 bar/26 psi.
   - While sealant is being filled, the inflation pressure may intermittently rise to approx. 5 bar/73 psi. Do not switch off the compressor in this phase.

8. Switch off the compressor.

   ![Diagram of sealant application](image)

   Do not allow the compressor to run too long

   Do not allow the compressor to run longer than 10 minutes; otherwise, the device will overheat and may be damaged. ➡️

   If an air pressure of 1.8 bar/26 psi is not reached:
   1. Unscrew the filling hose 2 from the wheel and drive forward and back approx. 33 ft/10 m to evenly distribute the sealant in the tire.
   2. Inflate the tire again using the compressor.

   If the inflation pressure of 1.8 bar/26 psi is still not reached, the tire is too heavily damaged. Contact the nearest service center.

**Stowing the Mobility System**

1. Unscrew the filling hose 2 of the sealant bottle from the wheel.

2. Unscrew the compressor connection hose 6 from the sealant bottle.

3. Connect the filling hose 2 of the sealant bottle with the free connector on the sealant bottle.
   - This prevents left-over sealant from escaping from the bottle.

4. Wrap the empty sealant bottle in suitable material to avoid dirtying the cargo area.

5. Stow the Mobility System back in the vehicle.

**Distributing the sealant**

Drive approx. 3.1 miles/5 km to evenly distribute the sealant.

Do not exceed a speed of 50 mph/80 km/h. If possible, do not drop below a speed of 10 mph/20 km/h.

**Correcting the tire inflation pressure**

1. After driving approx. 3.1 miles/5 km, or about 10 minutes, stop in a suitable location.

2. Screw the connection hose 6 of the compressor directly onto the tire valve.

3. Insert the connector 5 into the power socket in the passenger compartment.

4. Correct the tire inflation pressure to 1.8 bar/26 psi. When the engine is running:
   - To increase the inflation pressure: switch on the compressor. To check the currently set inflation pressure, switch off the compressor.
   - To reduce the inflation pressure: press the release button 9.
Do not allow the compressor to run too long

Do not allow the compressor to run longer than 10 minutes; otherwise, the device will overheat and may be damaged.

If the inflation pressure is not maintained, take the vehicle on another drive, distributing the sealant, refer to page 226. Then repeat steps 1 to 4 once.

If the inflation pressure of 1.8 bar/26 psi is still not reached, the tire is too heavily damaged. Contact the nearest service center.

**Continuing the trip**

Note the maximum speed

Do not exceed the maximum speed of 50 mph/80 km/h; otherwise, accidents can occur.

Replace the defective tire as soon as possible and have the wheel balanced.

Have the Mobility System refilled.

**SNOW CHAINS**

Only certain fine-link snow chains have been tested by MINI, classified as safe for use, and recommended. Consult your service center for more information.

Use only in pairs on the front wheels, equipped with tires of the following size:

195/60 R 16 M+S

With ALL4 all-wheel drive: only mount snow chains on the front wheels.

Observe the manufacturer's instructions when mounting snow chains. Do not exceed a speed of 30 mph or 50 km/h when using snow chains.

Do not initialize the Flat Tire Monitor if snow chains are mounted; otherwise, the instrument might issue an incorrect reading.

Do not initialize the Tire Pressure Monitor if snow chains are mounted; otherwise, the instrument might issue an incorrect reading.

When driving with snow chains, it may be useful to temporarily deactivate DSC or activate DTC, refer to page 92.
ENGINE COMPARTMENT

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

IMPORTANT FEATURES IN THE ENGINE COMPARTMENT

1  Vehicle identification number
2  Battery, under the cover  243
3  Dip stick for engine oil  230
4  Engine oil filler neck  230
5  Coolant expansion tank  232
6  Engine compartment fuse box  244
7  Reservoir for washer fluid for the headlight and window washer system  63
HOOD

Notes

⚠️ Working in the engine compartment
Never attempt to perform any service or
repair operations on your vehicle without the
necessary professional technical training.

If you are unfamiliar with the statutory guide‐
lines, have any work on the vehicle performed
only by a service center.

If this work is not carried out properly, there is
the danger of subsequent damage and related
safety hazards.

⚠️ To avoid damage, make sure that the
wiper arms are resting against the wind‐
shield before you open the engine compart‐
ment. Do not open the engine hood before the
engine has cooled down; otherwise, injuries
may result.

Unlocking and opening the hood

1. Pull the lever.

2. Lift the hood all the way.

3. Press the release handle and open the
hood.

⚠️ Danger of injury when the hood is open
There is a danger of injury from protrud‐
ing parts when the hood is open.

Closing the hood

Close the hood from a height of ap‐
prox. 16 in/40 cm with momentum. It must be
clearly heard to engage.

⚠️ Hood open when driving
If you see any signs that the hood is not
completely closed while driving, pull over im‐
meditely and close it securely.

⚠️ Danger of pinching
Make sure that the closing path of the
hood is clear; otherwise, injuries may result.
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

**General information**

Engine oil consumption depends on the driving style and the conditions of use. A highly sporty driving style, for example, results in considerably higher engine oil consumption. Therefore, regularly check the engine oil level after refueling.

**Checking the oil level with a dip stick**

1. Park the vehicle on level ground when the engine is at operating temperature, i.e., after driving continuously for at least 6 2 miles/10 km.
2. Switch the engine off.
3. After approx. 5 minutes, pull out the dip stick and wipe it off with a lint-free cloth, paper towel, etc.
4. Carefully insert the dip stick all the way into the measuring tube and pull it out again.

The oil level must be between the two marks on the dip stick.

The oil quantity between the two marks on the dip stick equals approx. 1 US quart/1 liter.

Do not exceed the high mark.
Do not exceed the high mark of the dip stick. Overfilling oil damages the engine.

**Adding engine oil**

**Filler neck**

Add a maximum quantity of 1 US quart/1 liter of oil only after the corresponding message appears on the Control Display or, in diesel engines, after the oil level is just above the low mark of the dip stick, refer to page 230.

Add oil promptly
Add oil within the next 30 miles/50 km; otherwise, engine damage could result.
Too much engine oil
Have the vehicle checked immediately; otherwise, surplus oil can lead to engine damage.

Protect children
Keep oil, grease, etc., out of reach of children and heed the warnings on the containers to prevent health risks.

Oil types for refilling

Notes

No oil additives
Do not use oil additives as these may cause engine damage.

Viscosity classes of engine oils
When selecting an engine oil, ensure that the engine oil belongs to one of the SAE viscosity classes 0W-40, 0W-30, 5W-40, or 5W-30, or malfunctions or engine damage may occur.

The engine oil quality is critical for the life of the engine.

Approved oil types

<table>
<thead>
<tr>
<th>Gasoline engine</th>
</tr>
</thead>
<tbody>
<tr>
<td>BMW High Performance SAE 5W-30</td>
</tr>
<tr>
<td>BMW Longlife-01</td>
</tr>
<tr>
<td>BMW Longlife-01 FE</td>
</tr>
</tbody>
</table>

Further information on approved oil types can be obtained from the service center.

Alternative oil types
If the approved engine oils are not available, up to 1 US quart/1 liter of an oil with the following specification can be used:

<table>
<thead>
<tr>
<th>Gasoline engine</th>
</tr>
</thead>
<tbody>
<tr>
<td>API SM or a higher quality standard</td>
</tr>
</tbody>
</table>

Engine oil change
The manufacturer of your vehicle recommends having the engine oil changed by a service center.

MINI recommends
MINI Original Engine Oil.
COOLANT

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

GENERAL INFORMATION

⚠️ Danger of burns from hot engine
Do not open the cooling system while the engine is hot; otherwise, escaping coolant may cause burns.

⚠️ Suitable additives
Only use suitable additives; otherwise, engine damage may occur. The additives are harmful to your health.

Coolant consists of water and additives. Not all commercially available additives are suitable for your MINI vehicle. Ask your service center for suitable additives.

COOLANT TEMPERATURE

If the coolant and therefore the engine overheat, a warning lamp lights up. A message appears on the Control Display.

COOLANT LEVEL

Checking
1. Do not open the hood until the engine has cooled down.
2. Turn the expansion tank cap counterclockwise slightly to allow any accumulated pressure to escape; then continue turning to open.
3. The coolant level is correct if it is between the markings. The markings are located on the side of the coolant reservoir.

Refilling
1. Do not open the hood until the engine has cooled down.
2. Turn the expansion tank cap counterclockwise slightly to allow any accumulated pressure to escape, then continue turning to open.
3. If the coolant level is low, slowly add coolant up to the specified level; do not overfill.
4. Twist the cap closed.
5. Have the cause of the coolant loss eliminated as soon as possible.

Disposal
Comply with the appropriate environmental protection regulations when disposing of coolant additives.
MAINTENANCE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

MINI MAINTENANCE SYSTEM

The MINI maintenance system provides information on required maintenance measures and thus provides support in maintaining road safety and the operational reliability of the vehicle.

CONDITION BASED SERVICE CBS

Sensors and special algorithms take into account the various driving conditions of your MINI. Based on this, Condition Based Service determines the current and future maintenance requirements.

The system makes it possible to adapt the amount of maintenance you need to your user profile.

Detailed information on service requirements can be displayed on the Control Display, refer to page 73.

Service data in the remote control

Information on the required maintenance is continuously stored in the remote control. Your service center will read out this data and suggest the right array of service procedures for your vehicle. Therefore, hand your service specialist the remote control that you used most recently.

Setting the correct date

Make sure the date is set correctly; otherwise, the effectiveness of CBS Condition Based Service is not ensured.

SERVICE AND WARRANTY INFORMATION BOOKLET FOR US MODELS AND WARRANTY AND SERVICE GUIDE BOOKLET FOR CANADIAN MODELS

Please consult your Service and Warranty Information Booklet for US models and Warranty and Service Guide Booklet for Canadian models for additional information on service requirements.

Maintenance and repair should be performed by your service center. Make sure to have regular maintenance procedures recorded in the vehicle’s Service and Warranty Information Booklet for US models, and in the Warranty and Service Guide Booklet for Canadian models. These entries are proof of regular maintenance.
SOCKET FOR OBD ONBOARD DIAGNOSIS

⚠️ Socket for Onboard Diagnosis

The socket for Onboard Diagnosis may only be used by the service center, by workshops that operate according to the specifications of the vehicle manufacturer with appropriately trained personnel, and by other authorized persons. Otherwise, its use may lead to vehicle malfunctions.

Primary components in the vehicle emissions can be checked via the OBD socket using a device.

Emissions

⚠️ The warning lamps light up. The vehicle is producing higher emissions. You can continue your journey, but moderate your speed and exercise due caution. Have the vehicle checked as soon as possible.

Under certain circumstances, one of the lamps flashes or lights up continuously. This indicates that there is excessive misfiring or a malfunction in the engine. If this happens, reduce the vehicle speed and drive to the next service center promptly. Serious engine misfiring within a brief period can seriously damage emission control components, in particular the catalytic converter. In addition, the mechanical engine components may become damaged.

If the fuel filler cap is not properly tightened, the OBD system may conclude that fuel vapor is escaping; this will cause a display to light up. If the filler cap is then tightened, the display should go out in a few days.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

WIPER BLADE REPLACEMENT

General information

⚠️ Do not fold down the wipers without wiper blades

Do not fold down the wipers if wiper blades have not been installed; this may damage the windshield.

Replacing the front wiper blades

1. Fold up and hold the wiper arm.
2. Squeeze the locking spring, arrows 1, and fold out the wiper blade, arrow 2.
3. Take the wiper blade out of the catch mechanism toward the front.
4. Press the new wiper blade into the fixation until it engages audibly.
5. Fold down the wiper arm.

Risk of damage

Before opening the hood, ensure that the wiper arms with wiper blades are folded onto the window; otherwise, damage may occur.

Changing the rear wiper blade

MINI Countryman:

1. Fold up and hold the wiper arm.
2. Turn the wiper blade all the way back, arrow.
3. Press the wiper blade against the stop to push it out of the fixation.
4. Press the new wiper blade into the fixation until it engages audibly.
5. Fold down the wiper arm.

MINI Paceman:
LAMP AND BULB REPLACEMENT

Notes

Lamps and bulbs
Lamps and bulbs make an essential contribution to vehicle safety. Therefore, exercise caution when handling lights and bulbs.
The manufacturer of the vehicle recommends that you entrust corresponding procedures to the service center if you are unfamiliar with them or they are not described here.
You can obtain a selection of replacement bulbs at the service center.

⚠️ Danger of burns
Only change bulbs when they are cool; otherwise, there is the danger of getting burned.

⚠️ Working on the lighting system
When working on the lighting system, you should always switch off the lights affected to prevent short circuits.
To avoid possible injury or equipment damage when replacing bulbs, observe any instructions provided by the bulb manufacturer.

⚠️ Do not touch the bulbs
Do not touch the glass of new bulbs with your bare hands, as even minute amounts of contamination will burn into the bulb’s surface and reduce its service life.
Use a clean tissue, cloth or something similar, or hold the bulb by its base.

Caring for the headlights, refer to page 251.
For bulb replacement that is not described here, please contact the service center or a workshop that works according to the repair procedures of the manufacturer with correspondingly trained personnel.

For checking and adjusting headlight aim, please contact your MINI dealer.

Light-emitting diodes LEDs
In some equipment, the light source is provided by light-emitting diodes behind a cover.
These light-emitting diodes, which operate using a concept similar to that applied in conventional lasers, are designated as Class 1 light-emitting diodes.

⚠️ Do not remove the covers
Do not remove the covers, and never stare into the unfiltered light for several hours; otherwise, irritation of the retina could result.

Headlight glass
Condensation can form on the inside of the headlights in cool or humid weather. When the light is switched on, the condensation evaporates after a short time. The headlights do not need to be changed.
If the condensation in the headlights does not evaporate after trips with the lights switched on, and the amount of moisture in the headlights increases, for example if water droplets form, have them checked by your service center.

Bi-xenon headlights
These bulbs have a very long life and the likelihood of failure is very low, provided that they are not switched on and off excessively. If a bulb should nevertheless fail, you can continue driving cautiously with the front fog lights, provided this is permitted by local laws.

⚠️ Do not perform work/bulb replacement on xenon headlamps
Have any work on the xenon lighting system, including bulb replacement, performed only by a service center.
Due to the high voltage present in the system, there is the danger of fatal injuries if work is carried out improperly.
Front lights, bulb replacement

At a glance

Headlights

1 Low beams/high-beams
2 Turn signal

Lower front lights

1 Parking lights
2 Daytime running lights or fog lights

Lower LED front lights

1 Parking lights / daytime running lights
2 Fog lights

Halogen low beams and high-beams

H13 bulb, 60/55 watt

⚠ Wear protective goggles and gloves
Halogen bulbs are pressurized. Therefore, wear protective goggles and gloves. Otherwise, there is a danger of injuries if the bulb is accidently damaged during replacement.◀

⚠ Attach the cover carefully
When attaching the cover, proceed carefully; otherwise, leaks may occur, causing damage to the headlamp system.◀

Access to the bulbs through the engine compartment

Follow the general instructions on lamps and bulbs, refer to page 236.
Low beam/high-beam bulbs can be changed from the engine compartment.
To remove the cover:

1. Press the tab.
2. Fold away the cover and take it out of the holder.

Proceed in reverse order to attach the cover.

Attach the cover carefully
When attaching the cover, proceed carefully; otherwise, leaks may occur, causing damage to the headlamp system.

Replacing the bulb

1. Turn the bulb counterclockwise, arrow 1, and remove it, arrow 2.
2. Press the release, arrow 1, and pull off the connector, arrow 2.

3. Insert the new bulb and attach the cover in reverse order.

**LED parking lights/LED fog lights/LED daytime running lights**

Follow the general instructions on lamps and bulbs, refer to page 236.

Lights are implemented using LED technology. Contact your service center in the event of a malfunction.

**Turn signals/parking lights/roadside parking lights/fog lights/and daytime running lights**

Access to the bulbs via the wheel housing

Follow the general instructions on lamps and bulbs, refer to page 236.

Replacing the turn signal bulb

21-watt bulb, P 21 W, or PY 21 W

1. Turn the wheel.
2. Remove cover 1.

To do this, turn the cover counterclockwise.
3. Remove the inside cover. To do this, turn the cover counterclockwise.

4. Turn the bulb counterclockwise and remove it.

5. Insert the new bulb and attach the covers in reverse order.

Replacing the parking light bulb and roadside parking light bulb

5-watt bulb, W 5 W

1. Turn the wheel.
2. Remove cover 2.
   To do this, turn the cover counterclockwise.
3. Pull off the plug-in cable connector.
4. Turn the lower bulb counterclockwise and remove it.
5. Insert the new bulb and attach the cover in reverse order.

Replacing the daytime running light bulb

Bulb PSX24W

1. Turn the wheel.
2. Remove cover 2.
   To do this, turn the cover counterclockwise.
3. Pull off the plug-in cable connector.
4. Turn the upper bulb counterclockwise and remove it.

Replacing the front fog light bulb

H8 bulb, 35 watt

1. Turn the wheel.
2. Remove cover 2.
   To do this, turn the cover counterclockwise.
3. Pull off the plug-in cable connector.
4. Turn the lower bulb counterclockwise and remove it.
5. Insert the new bulb and attach the cover in reverse order.

Replacing the front fog light bulb H8 bulb, 35 watt

1. Turn the wheel.
2. Remove cover 2.
   To do this, turn the cover counterclockwise.
3. Pull off the plug-in cable connector.
4. Turn the lower bulb counterclockwise and remove it.
5. Insert the new bulb and attach the cover in reverse order.

Replacing the daytime running light bulb

Bulb PSX24W

1. Turn the wheel.
2. Remove cover 2.
   To do this, turn the cover counterclockwise.
3. Pull off the plug-in cable connector.
4. Squeeze the lower bulb at both tabs and pull out.

5. Insert the new bulb and attach the cover in reverse order.

**Lateral turn signals**
5-watt bulb, W 5 W
1. Open the hood.
2. Squeeze the clip, arrows, and remove the bulb holder.
3. Remove the bulb by turning it to the left and replace it.
4. Insert the new bulb and attach the cover in reverse order.

**Side marker lights**
To replace these bulbs, contact the service center.

**Tail lights, bulb replacement**
Follow the general instructions on lamps and bulbs, refer to page 236.

Turn signal: 21-watt bulb, PY 21 W

---

**MINI Countryman**

1. Brake/tail light
2. Turn signal
3. Brake/tail light
4. Backup light

**MINI Paceman**

1. Brake light
2. Tail light
3. Turn signal
4. Backup light

**Replacing**
All bulbs are integrated in a central bulb holder.

**MINI Countryman**

1. Switch off the lights and take the remote control out of the ignition lock.
2. Open the tailgate.
3. Press the cover out of the cargo area side panel at the rear and remove it.

4. Detach the emergency release of the fuel filler flap, refer to page 212, and push it aside with the foam insert. Ensure that the emergency release is not damaged.

5. Disengage the bulb holder by pushing down the clip, arrow 1.

6. Take out the bulb holder and detach the cable, arrow 2.

7. Apply gentle pressure to the bulb while turning it to the left and remove it.

8. Insert the new bulb and mount the bulb holder in reverse order. Ensure that the bulb holder engages in all fasteners.

9. Return the foam insert to its original position and reattach the emergency release of the fuel filler flap.

10. Reattach the cover.

MINI Paceman

1. Switch off the lights and take the remote control out of the ignition lock.

2. Open the tailgate.

3. Remove the cover from the cargo area side trim.

4. Unlock the fastening elements, arrows 1, by turning.

5. Remove the screws, arrows 2, using the hex key from the vehicle document portfolio.

6. Remove the tail light.

7. Disengage the bulb holder by pushing down the clip, arrows 1.

8. Take out the bulb holder and detach the cable, arrow 2.
9. Apply gentle pressure to the bulb while turning it to the left and remove it.
10. Insert the new bulb and mount the bulb holder in reverse order. Ensure that the bulb holder engages in all fasteners.

License plate lights
5-watt bulb, C 5 W

Replacing

MINI Countryman
1. Push the light to the left in the catch of the light housing using the screwdriver, arrow 1.
2. Take out the light, arrow 2.
3. Replace the bulb.
4. Insert the light.

MINI Paceman
1. Push the light to the left in the catch of the light housing using the screwdriver, arrow 1.
2. Take out the light, arrow 2.
3. Replace the bulb.
4. Insert the light.

Center brake light
This light uses LED technology for operation. In case of a defect, please contact your service center or a workshop that works according to the repair procedures of the manufacturer of your MINI with correspondingly trained personnel.

CHANGING WHEELS

Notes
The vehicle may be equipped with conventional tires with the Mobility System, refer to page 225, or with run-flat tires, refer to page 224.

No spare tire is available in the case of a flat tire.

Suitable tools for changing the wheels are available from the service center as an accessory.

Jacking points for the vehicle jack
MINI Countryman:

MINI Paceman:
The jacking points for the vehicle jack are located in the positions shown.

**VEHICLE BATTERY**

**Maintenance**
The battery is maintenance-free, i.e., the electrolyte will last for the life of the battery in temperate climate conditions.
The service center will be happy to answer any questions on the battery.

**Battery replacement**

*Use approved vehicle batteries*
Only use vehicle batteries that have been approved for your vehicle by the manufacturer; otherwise, the vehicle could be damaged and systems or functions may not be fully available.

Have the vehicle battery registered by the service center after it is replaced to ensure that all comfort functions are available without restrictions and that any associated Check Control messages are no longer displayed.

**Charging the battery**

**Note**

*Do not connect the charger to the socket*
Do not connect the battery charger to the socket installed in the vehicle at the factory as this could damage the battery.

Only charge the battery in the vehicle when the engine is switched off. Connections, refer to page 245.

**General information**
Ensure that the battery is sufficiently charged to achieve the full battery life.
It may be necessary to charge the battery in the following cases:

- When the vehicle is frequently used to travel short distances.
- When the vehicle has not been driven for more than one month.

**Power failure**
After a temporary power failure, some equipment will be restricted in its use and will need to be reinitialized. In addition, certain individual settings will be lost and must be updated:

- Time and date: the values must be updated, refer to page 71.
- Radio: the stations need to be stored again, refer to page 157.
- Onboard monitor: full functionality will be restored after some time.
- Glass sunroof, electrical: it may only be possible to tilt the roof. The system needs to be initialized. Contact the service center.

**Indicator/warning lights**

*Lights up red*: the vehicle battery is no longer being charged. Alternator malfunction.
Switch off all unnecessary electrical consumers. Have the battery checked immediately.

*Lights up yellow*: the battery charge level is very low, the battery is old, or it is not securely connected.
Charge the battery by taking a long drive or using an external charger. If the indicators appear
again, have the battery checked as soon as possible.

Disposing of old batteries

Have used batteries disposed of by the service center after they are replaced or take them to a recycling center. Maintain the battery in an upright position for transport and storage. Secure the battery so that it does not tip over during transport.

FUSES

Replacing fuses

Never attempt to repair a blown fuse and do not replace a defective fuse with a substitute of another color or amperage rating; this could lead to a circuit overload, ultimately resulting in a fire in the vehicle.

Fuses should be replaced by the service center. Information on the fuses can be found on the inside of the covers.

In the engine compartment

Opening the cover

Press the snap lock.

In interior

On the right side of the footwell.

Opening the cover

Push out at the recess.
BREAKDOWN ASSISTANCE

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

HAZARD WARNING FLASHERS

The button is located on the speedometer.

FIRST AID KIT

Some of the articles contained in the first aid kit have a limited service life. Therefore, check the use-by dates of the contents regularly and replace the items before they expire.

The first aid kit is located in the left side trim on the cargo area floor or under the loading floor.

ROADSIDE ASSISTANCE

Service availability

Roadside Assistance can be reached around the clock in many countries. You can obtain assistance there in the event of a vehicle breakdown.

JUMP-STARTING

Notes

If the battery is discharged, the engine can be started using the battery of another vehicle and two jumper cables. In the same way, you can help jump-start another vehicle. Only use jumper cables with fully insulated clamp handles.
To prevent personal injury or damage to both vehicles, adhere strictly to the following procedure.

⚠️ Do not touch live parts
To avoid the risk of potentially fatal injury, always avoid all contact with electrical components while the engine is running.

Preparation
1. Check whether the battery of the other vehicle has a voltage of 12 volts and approximately the same capacitance in Ah. This information can be found on the battery.
2. Switch off the engine of the assisting vehicle.
3. Switch off any electronic systems/power consumers in both vehicles.

⚠️ Bodywork contact between vehicles
There must not be any contact between the bodies of the two vehicles, otherwise there is a danger of shorting.

Connecting jumper cables

⚠️ Connecting order
Connect the jumper cables in the correct order; otherwise, there is the danger of injury from sparking.

1. Open the battery cover in the engine compartment to access the positive terminal.

2. Unlock the tabs of the positive terminal cover on the left and right, arrows 1, and raise the cover, arrow 2.

3. Attach one terminal clamp of the positive jumper cable to the positive terminal of the battery or to a starting aid terminal of the vehicle providing assistance.

4. Attach the second clamp of the positive jumper cable to the positive terminal of the battery of the vehicle to be started.

5. Attach one terminal clamp of the negative jumper cable to the negative terminal of the battery, or to the corresponding engine or body ground of the vehicle providing assistance.

6. Attach the second clamp of the negative jumper cable to the negative terminal of
the battery, or to the engine or body ground of the vehicle to be started.

Body ground:

**Starting the engine**

Never use spray fluids to start the engine.

1. Start the engine of the assisting vehicle and let it run for several minutes at a slightly increased idle speed.
2. Start the engine of the vehicle being started in the usual way.
   
   If the first starting attempt is not successful, wait a few minutes before making another attempt in order to allow the discharged battery to recharge.
3. Let both engines run for several minutes.
4. Disconnect the jumper cables in the reverse order.

Check the battery and recharge if necessary.

**TOW-STARTING AND TOWING**

**Notes**

⚠️ Observe applicable laws and regulations for tow-starting and towing.

⚠️ No additional passengers

Do not transport any passengers other than the driver in a vehicle that is being towed.

**Using a tow fitting**

The screw-in tow fitting must always be carried in the vehicle. It can be screwed in at the front or rear of the MINI.

The tow fitting is stowed in the following location, depending on the equipment:

- Under the right or left front seat.
- In the pouch of the wheel change set in the cargo area.

⚠️ Tow fitting, information on use

- Use only the tow fitting provided with the vehicle and screw it all the way in.
- Use the tow fitting for towing on paved roads only.
- Avoid lateral loading of the tow fitting, e.g., do not lift the vehicle by the tow fitting.

Otherwise, damage to the tow fitting and the vehicle can occur.

**Access to the screw thread**

Push out the tow fitting cover at the appropriate recess in the bumper.

**Front**
Rear

Being towed

⚠️ Follow the towing instructions
Follow all towing instructions, or vehicle damage or accidents may occur.⚠️

▷ Make sure that the ignition is switched on; otherwise, the low beams, tail lights, turn signals, and windshield wipers may be unavailable.
▷ Do not tow the vehicle with the rear axle tilted, as the front wheels could turn.
▷ When the engine is stopped, there is no power assist. Consequently, more force needs to be applied when braking and steering.
▷ Larger steering wheel movements are required.
▷ Switch on the hazard warning system, depending on local regulations.

Manual transmission

Gearshift lever in neutral position.

Steptronic transmission

⚠️ Towing vehicles with a Steptronic transmission
Only transport vehicles with a Steptronic transmission on tow trucks or with raised front wheels; otherwise, the transmission may be damaged.⚠️

Towing with a tow bar

⚠️ Light towing vehicle
The towing vehicle must not be lighter than your vehicle, or it will not be possible to control vehicle response.⚠️

⚠️ Correctly attach the tow bar
Only secure the tow bar on the tow fittings; damage can occur when it is secured on other parts of the vehicle.⚠️

The tow fittings used should be on the same side on both vehicles.

Should it prove impossible to avoid mounting the tow bar at an offset angle, please observe the following:

▷ Clearance and maneuvering capability will be sharply limited during cornering.
▷ The tow bar will generate lateral forces if it is attached offset.

Towing with a tow rope

When starting to tow the vehicle, make sure that the tow rope is taut.

To avoid jerking and the associated stresses on the vehicle components when towing, always use nylon ropes or nylon straps.

⚠️ Attaching the tow rope correctly
Only secure the tow rope on the tow fitting; otherwise, damage can occur when it is secured on other parts of the vehicle.⚠️

With a tow truck: vehicles without ALL4 all-wheel drive

⚠️ Do not lift the vehicle
Do not lift the vehicle by the tow fitting or body and chassis parts; otherwise, damage may result.⚠️
MINI Countryman:

Have the vehicle transported with a tow truck with a so-called lift bar or on a flat bed.

**With a tow truck: vehicle with ALL4 all-wheel drive**

⚠️ Do not lift the vehicle
- Do not lift the vehicle by the tow fitting or body and chassis parts; otherwise, damage may result.

⚠️ Note for vehicles with ALL4 all-wheel drive
- Do not tow a vehicle with ALL4 all-wheel drive with just the front or rear axle raised; otherwise, the wheels could lock up and the transfer case could be damaged.

MINI Paceman:

Only transport the vehicle on a flat-bed.

**Tow-starting**

If possible, start the engine by jump-starting, refer to page 245, it rather than tow-starting the vehicle. Vehicles with a catalytic converter should only be tow-started when the engine is cold; vehicles with an automatic transmission cannot be tow-started.

1. Switch on the hazard warning system and comply with local regulations.
2. Switch on the ignition, refer to page 57.
3. Engage third gear.
4. Have the vehicle tow-started with the clutch depressed and then slowly release the clutch. After the engine starts, immediately depress the clutch completely again.
5. Stop at a suitable location, remove the tow bar or rope, and switch off the hazard warning system.
6. Have the vehicle checked.
VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

CAR WASHES

Notes

Steam jets or high-pressure washers
When using steam jets or high-pressure washers, hold them a sufficient distance away and use a maximum temperature of 140 °F/60 °C.

Holding them too close or using excessively high pressures or temperatures can cause damage or preliminary damage that may then lead to long-term damage.

Follow the operating instructions for the high-pressure washer.

Do not direct steam or high-pressure washers toward the labels applied by the manufacturer; otherwise, damage may result.

Cleaning sensors/cameras with high-pressure washers
When using high-pressure washers, do not spray the seals of the retractable hardtop and the exterior sensors and cameras, for Park Distance Control, for instance, for extended periods of time and only from a distance of at least 12 in/30 cm.

During the winter months
Ensure that the vehicle is washed more frequently in winter. Intense soiling and road salt can damage the vehicle.

After washing the vehicle, apply the brakes briefly to dry them; otherwise, braking action can be reduced and corrosion of the brake discs can occur.

Regularly remove foreign bodies, such as leaves, from the area of the windshield when the hood is open.

Washing in automatic car washes
Give preference to cloth car washes or those that use soft brushes in order to avoid paint damage.

Do not use automatic high-pressure washers; otherwise, water may drip into the interior in the area of the windows.

Before driving into the car wash, check whether the system is suitable for your MINI. Note the following points:

▷ Vehicle dimensions, refer to page 258.
▷ If necessary: fold in the exterior mirrors, refer to page 49.
▷ Maximum permissible tire width.

Guide rails in car washes
Avoid car washes with guide rails higher than 4 in/10 cm; otherwise, the vehicle chassis could be damaged.

Preparations before driving into the car wash:

▷ Unscrew the road antenna.
▷ Deactivate the rain sensor to avoid unintentional wiper activation.
▷ Deactivate the rear window wiper and protect it from damage. Ask the car wash operator about any necessary protective measures.
Remove additional attachments, for instance a spoiler or telephone antenna, if there is a risk that these may be damaged.

Insert the remote control into the ignition lock.

**Steptronic transmission**
Before driving into the car wash, note the following to ensure that the vehicle can roll:

1. Insert the remote control into the ignition lock, even with Comfort Access.
2. Move the selector lever to position N.
3. Release the parking brake.
4. Switch the engine off.
5. Leave the remote control in the ignition lock so that the vehicle can roll.

**Hand car wash**
If washing the vehicle by hand, use copious quantities of water and car shampoo if necessary. Clean the vehicle with a sponge or a washing brush by applying gentle pressure. Before cleaning the windshield, deactivate the rain sensor to avoid unintentional wiper activation or switch off the ignition.

Adhere to the local regulations regarding washing cars by hand.

**Headlights**
Do not rub dry and do not use abrasive or caustic cleansers. Soak areas that have been soiled, e.g., due to insects, with shampoo and rinse off with copious quantities of water. Thaw ice with a window deicer; do not use an ice scraper.

**Windows**
Clean the outside and inside surfaces of the windows and the mirror glasses with window cleaner.

Do not clean mirror glass with cleaners containing quartz.

**Wiper blades**
Clean with soapy water and replace regularly to avoid streaking. Wax and preservative residue and soiling on the windows cause streaking during window wiping and lead to premature wear on the wiper blades and malfunctions of the rain sensor.

**VEHICLE CARE**

**Car care products**
Regular cleaning and care contributes significantly to vehicle value retention.

The manufacturer recommends using cleaning and care products from MINI, since these have been tested and approved.

Original MINI CareProducts have been tested on materials, in the laboratory, and in the field, and offer optimum care and protection for MINI vehicles.

⚠️ Do not use cleansers that contain alcohol or solvents

Do not use cleansers that contain alcohol or solvents, such as lacquer thinners, heavy-duty grease removers, fuel, or such; this could lead to surface damage.

⚠️ Car care and cleaning products

Follow the instructions on the container.

When cleaning the interior, open the doors or windows.

Only use products intended for cleaning vehicles.

Cleansers can contain substances that are dangerous and harmful to your health.
Vehicle paint
Regular care contributes to vehicle value retention and protects the paintwork against the long-term effects of paint-damaging substances.

Environmental influences in areas with higher air pollution or natural contaminants, such as tree resin or pollen, can have an impact on the vehicle paint. Therefore, it is important to tailor the frequency and extent of your car care to these influences.

Immediately remove especially aggressive substances, such as spilled fuel, oil, grease, or bird droppings, to prevent damage to the paintwork.

Correcting paint damage
Depending on the severity of the damage, repair stone impact damage or scratches immediately to prevent rust formation.

The manufacturer recommends having paint damage corrected with a professional repair paint job according to factory specifications using original MINI paint materials.

Preservation
Preservation is needed when water no longer beads off of the clean paint surfaces. Only use paint preservation products that contain carnauba or synthetic waxes.

Caring for matte finishes
▷ Do not use paint cleaners or gloss protection agents such as car wax.
▷ Do not polish the surface or use abrasive products, as these may cause the finish to become glossy.

Leather care
The leather processed by the manufacturer is a high quality natural product. Light graininess is a typical feature of natural leather.

Particles of dust and road grime chafe in pores and folds, and lead to increased wear and premature degradation of the leather surface. Therefore, remove dust from the leather regularly, using a cloth or vacuum cleaner.

Make especially sure that light-colored leather is cleaned regularly as it is more susceptible to soiling.

Twice a year, treat the leather with a leather lotion as dirt and grease will attack the protective layer of the leather.

Upholstery material care
Vacuum regularly with a vacuum cleaner to remove superficial soiling.

In case of heavy soiling, e.g., beverage stains, use a soft sponge or lint-free microfiber cloth in combination with a suitable interior cleaner. Follow the instructions on the container.

Clean the upholstery material down to the seams using large sweeping motions. Avoid rubbing the material vigorously.

Damage from Velcro® fasteners
Open Velcro® fasteners on pants or other articles of clothing can damage the seat covers. Ensure that any Velcro® fasteners are closed.

Caring for special components

Interior plastic parts
These include:
▷ Imitation leather surfaces
▷ Lamp lenses
▷ Indicator covers
▷ Matte components

Clean with water and a solvent-free plastic cleaner if necessary.

Do not use cleansers that contain alcohol or solvents

Do not use cleansers that contain alcohol or solvents, such as lacquer thinners, heavy-duty...
grease removers, fuel, or such; this could lead to surface damage.

Rubber seals
Only treat with water or a rubber care product.
When cleaning rubber seals, do not use silicone sprays or other care products containing silicone; otherwise, noise and damage may result.

Chrome surfaces
Carefully clean components such as the radiator grille or door handles with an ample supply of water, possibly with shampoo added, particularly when they have been exposed to road salt. For additional treatment, use a chrome polish.

Light-alloy wheels
When cleaning the wheels on the vehicle, only use a neutral wheel rim cleaner with a pH value of 5 to 9.
Do not use abrasive cleaners or a steam jet hotter than 140 °F/60 °C; otherwise, damage may result. Adhere to the manufacturer instructions. Aggressive, acidic, or alkaline cleaners may destroy the protective coating of neighboring components such as the brake disc.

Exterior sensors
The sensors on the outside of the vehicle, such as for Park Distance Control, must be kept clean and free of ice to ensure that they remain fully functional.

Decorative trim
Clean decorative trims and fine wood components with a moist cloth only. Then dry with a soft cloth.

Safety belts
Dirty belt straps impede the reeling action and thus have a negative impact on safety.

\[\text{No chemical cleaning}\]
Do not clean chemically; this can destroy the webbing.

Carpets/floor mats
\[\text{No objects in the area around the pedals}\]
Keep floor mats, carpets, and any other objects out of the area of motion of the pedals; otherwise, the function of the pedals could be impeded while driving.
Do not place additional floor mats over existing mats or other objects.
Only use floor mats that have been approved for the vehicle and can be properly fixed in place.
Ensure that the floor mats are securely fastened again when they are returned after being removed, such as for cleaning.
Floor mats can be removed for cleaning.
If they are very dirty, clean with a microfiber cloth and water or an interior cleaner. To prevent matting of the carpet, rub back and forth in the direction of travel only.

Displays
To clean the displays, such as the radio or display elements, use an antistatic microfiber cloth.
\[\text{Cleaning displays}\]
Do not use chemical or household cleansers.
Keep all fluids and moisture away from the unit.
Otherwise, they could affect or damage surfaces or electrical components.
Avoid pressing too hard when cleaning and do not use abrasive materials; otherwise, damage can result.
CD/DVD drives

⚠️ No cleaning CD
Do not use cleaning CDs; otherwise, parts of the drive may become damaged.

Long-term vehicle storage
Your service center can advise you on what to consider when storing the vehicle for longer than three months.
TECHNICAL DATA

VEHICLE EQUIPMENT
This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

NOTE
The technical data and specifications in this Owner's Manual are used as guidance values. The vehicle-specific data can deviate from this, for example, due to the selected special equipment, country version or country-specific measurement method. Detailed values can be found in the approval documents, on information signs on the vehicle or can be obtained from the service center. The information in the vehicle documents always has priority.

DIMENSIONS
The dimensions can vary depending on the model version, equipment or country-specific measurement method. The specified heights do not take into account attached parts, for example, a roof antenna, roof racks or spoiler. The heights can deviate, for example, due to the selected special equipment, tires, load and chassis version.

SHORT COMMANDS FOR VOICE ACTIVATION

VEHICLE EQUIPMENT

This chapter describes all series equipment as well as country-specific and special equipment offered for this model series. Therefore, it also describes equipment that may not be found in your vehicle, for instance due to the selected special equipment or the country version. This also applies to safety-related functions and systems.

When using the features and systems described here, adhere to local regulations.

GENERAL INFORMATION

Instructions for voice activation system, refer to page 24.

To have the available spoken instructions read out loud: ›Voice commands‹

The following short commands apply to vehicles equipped with a voice activation system. They have no function in vehicles in which only the mobile phone is operated using the voice.

ADJUSTING

Vehicle

<table>
<thead>
<tr>
